

1966 WORLD RADIO TV HANDBOOK

20th. edition

The complete directory
and basic reference guide of
international radio and
television

Including short wave, medium wave & TV stations with frequencies,
programs, world maps, and other data. Complete index on page 10

NEC's wide range of integrated broadcasting systems — geared to meet any demand anywhere !

NEC, Japan's leading producer of electronic and telecommunication equipment, has designed and installed a wide range of integrated broadcasting systems throughout the world. These include everything from radio and TV stations to the satellite ground station that made possible the telecast relay of the Tokyo Olympic Games across the Pacific via Syncom III. Indeed, NEC is geared to meet any requirement for integrated radio and TV broadcasting systems, from compact transistorized studio equipment to VHF and UHF transmitters and antennas—as well as microwave relay facilities. Of course, all NEC equipment is de-

signed for easy accessibility, simple maintenance and minimum power consumption. It meets the highest international broadcast standards of signal quality, stability and reliability such as FCC, CCIR, etc. At present, sixty percent of the more than seven hundred seventy-four radio stations in Japan are supplied with NEC equipment.

**Products for today —
Innovations for tomorrow**

NEC

Nippon Electric Company Limited P. O. Box 1, Takanawa, Tokyo, Japan

The new Marconi **MARK V** solid-state television camera

ALL SOLID STATE

Silicon transistors used throughout the chain to give outstanding stability and reliability. Constant output ensured despite mains variations, temperature changes or external fields. Easy access for tube changing. No image orthicon setting up controls.

SIMPLE CONTROL

Simple compact control panel, four of which can be mounted on a console desk, gives complete 'hands off' operation.

MINIMUM RACK SPACE

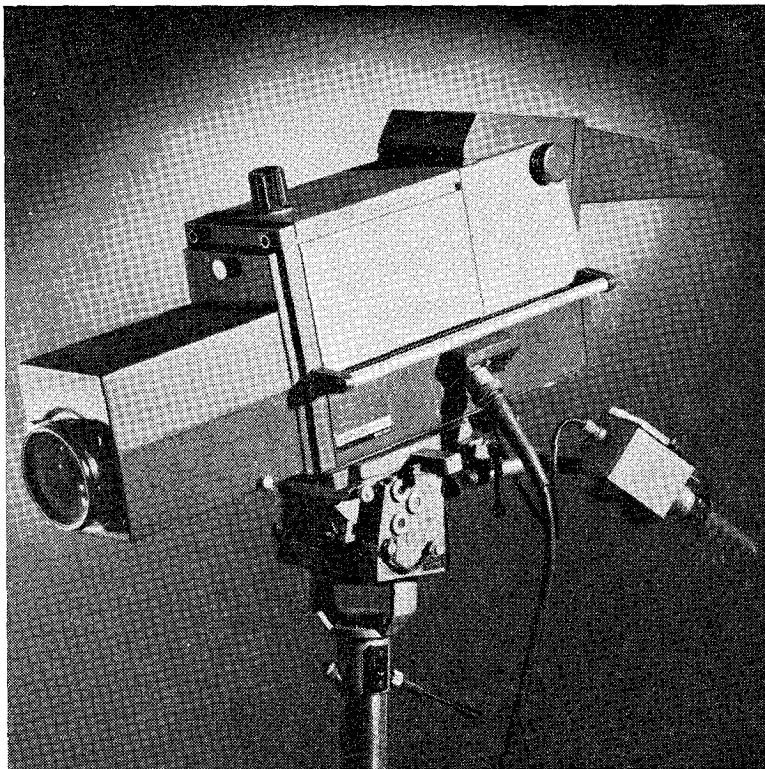

Single rack mounting camera control unit, control panel and power supply. Circuitry contained in seven plug-in printed wiring modules, giving easy front access for maintenance.

INTEGRATED ZOOM LENSES

Choice of servo or manually controlled zoom lenses gives infinitely variable focal length for exact picture framing. Simplified camera operation and improved programme continuity.

TILTING VIEWFINDER

Ensures most comfortable viewing position for all camera angles. Detachable up to 30 ft. from camera. Brilliant picture (200 ft.-Lamberts). Camera, external or mixed signals available at cameraman's choice.

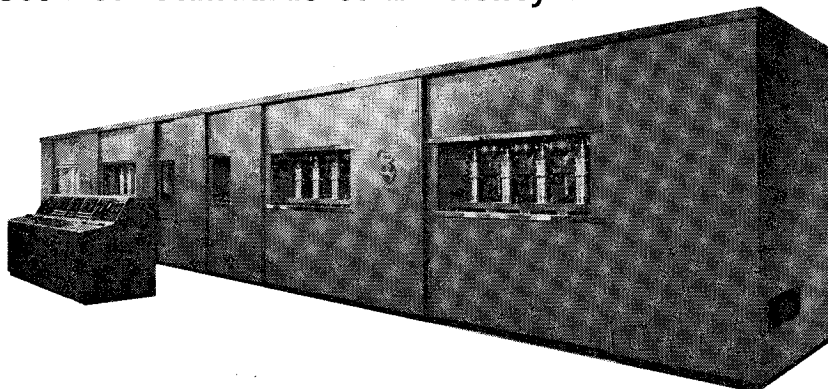

**The smallest, lightest 4½ in. Image Orthicon
Camera in production, as simple to operate
as an ordinary amateur photographic camera**

Continental Medium Wave Broadcast Transmitters Set New Standards of Efficiency and Performance!

TYPE 323B 1,000,000 WATT AM MF BROADCAST TRANSMITTER

Designed for operation in the standard broadcast band, Continental's 1,000,000 watt transmitter consists of two Type 320B 500,000 watt transmitters which are combined to pro-

vide a power output of 1,000,000 watts. These were the first super power transmitters built for the Voice of America, and were installed at Munich, Okinawa and Manila in 1953.

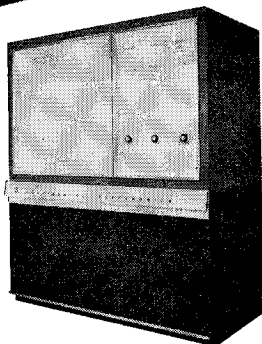

TYPE 317C 50,000 WATT AM MF BROADCAST TRANSMITTER

- High efficiency screen modulated power amplifier*
- Highest overall efficiency of any 50 kw transmitter known to be in existence today
- Both power amplifier tubes operate as conventional class "C" amplifier
- Modulator operates similar to push-pull class "B" amplifier
- Requires only 54 sq. ft. of floor space

TYPE 315C/316C 5,000/10,000 WATT AM MF BROADCAST TRANSMITTER

- Regulinear screen modulation system**
- Power increase from 5 kw to 10 kw without major circuit changes
- Centralized controls
- Requires only 34" x 66" of floor space
- Power supplies use solid state rectifiers
- Air cooled
- Only four tube types

P R E F A C E S

Sir Charles Moses

I would like to congratulate the World Radio TV Handbook, on the occasion of this anniversary issue, on the assistance it has provided for broadcasting organisations and the people they serve during the past twenty years. The cause of increasing international understanding can be served in many ways: the Handbook is making a practical contribution by providing broadcasters with information about their colleagues in other parts of the world,

and the public with encouragement to listen to programmes from other countries.

Close contact and understanding among the broadcasters of different countries is clearly of vital importance if radio and television are to be used fully to help the peoples of the world to live peacefully together. As the broadcasting media have such power over men's minds - either for good or evil - it is generally agreed that those who control broadcasting services carry a heavy responsibility to encourage tolerance and goodwill. But the broadcasters must first know and understand each other.

This is why I believe that regional broadcasting Unions have an especially important function in the cause of international understanding. These Unions of broadcasting organisations - the EBU, OIRT, URTNA and the ABU - provide means for their members to work together regularly and to get used to thinking beyond the boundaries of their own countries. The growing collaboration among the Unions, and the fact that some broadcasting organisations are members of more than one Union, opens further possibilities for genuine understanding and joint effort among broadcasters from widely different environments.

The ABU is the youngest of the regional Unions and I think it would be fair to say that it has, within its own region, members with a greater variety of backgrounds than is to be found in the other Unions. Its Statutes state that the ABU region stretches from longitudes 30° East to 170° West. In practice this means that its full members have their headquarters in cities as far apart as Ankara at the western end of Asia and Apia in the Pacific and, from north to south, from Seoul in Korea to Wellington in New Zealand.

Within this area our members speak many languages and have many different cultural backgrounds. Some are large organisations with extensive resources, others have the minimum facilities for putting programmes on the air. Some serve vast areas, other tiny islands. By whatever criterion you choose, the ABU's members in its own region could hardly be more varied, and this is without taking account of our associate members in other regions among whom the ABU has been glad to welcome some of the world's major broadcasters.

But there is common ground within this diversity and the ABU looks forward to building closer ties among its members and, through them, better understanding among the people of their respective

countries. The ABU members are all professional broadcasters and this gives them many bonds on which to build co-operation - the similarity of their work despite the different environments in which it is carried out; the common responsibilities of helping in national development and of providing education, information and entertainment; and the other problems that arise in every broadcasting service.

There is a series of maps published by UNESCO which show the number of radio and TV transmitters and receivers now existing. For some continents the symbols representing transmitters and receivers can barely be fitted into the space available but in many parts of the ABU's region they look very few indeed. This points to another of the ABU's main objectives: to help in the development of the broadcasting media in an area where there is a real need for broadcasting services to help in raising living standards, the level of education and working skills, and in generally opening opportunities to benefit from modern knowledge.

The ABU has, and will have, problems, as has every Union or association, but its members are determined that it will overcome these problems and are strengthened by knowing that they have the goodwill and co-operation of the other regional broadcasting Unions.

Sir CHARLES MOSES

Secretary-General, Asian Broadcasting Union

Gian Franco Zaffrani

I really would not care to say that WRTH is my "bed-side" book. One thing however is certain: if some inquisitive person should poke around in my office, a copy of it would be found in the top right-hand drawer of my desk. As a matter of fact, I always keep WRTH at hand because I consider it a sort of family book of ours, of the people who work in the field of sound and television waves the world over. For my part I consider WRTH something like a somewhat complicated visiting-card of an international brotherhood. It is the professional "who's who" of one of the greatest and most civilized of human labours. I might even say that WRTH is a modern "Gotha" of broadcasting in all continents.

My Assistants, who are all practical people, keep their WRTH copy on their desk, next to the telephone directory and the railway timetable. This simple way of placing it, topographically speaking, puts it on a level, as far as usefulness goes, with those books that, as everybody knows, are absolutely invaluable and universally used.

As for "the others" the people who do not belong to the brotherhood, WRTH is something of a code, a secret code. But they know, that if it is studied with due attention and wariness, it is possible to extract from it and to translate into a language that all can understand, an incredibly vast sum of information, data and notions.

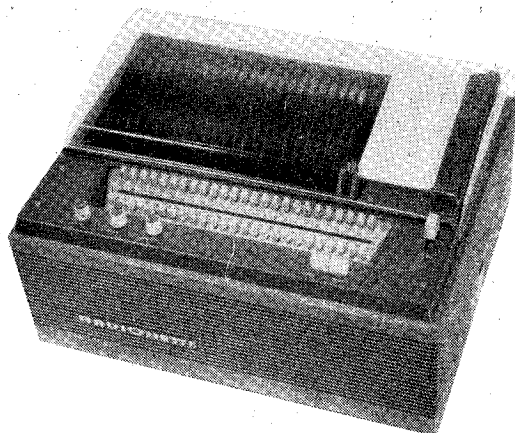

Considering these opinions, that are both favourable and in agreement with each other, it is easy to foresee a very happy future for this book that, with this edition, celebrates its 20th birthday.

Continued page 8

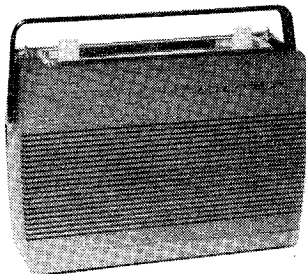

This year's great sensations in music entertainment

RADIONETTE MULTIPLAYER 50

This world novelty is playing 50 disc-sides in 6 hours non-stop in the home, for dancing entertainment and for background music in restaurants and stores. By push-buttons you can start, stop or replay any disc. Dimensions are as a conventional record changer. This selfplaying disc library protects the discs from dust and damage. Powerful transistorized amplifier of 15 Watts' output gives perfect HI-FI reproduction (45-17000 c/s) from your discs.

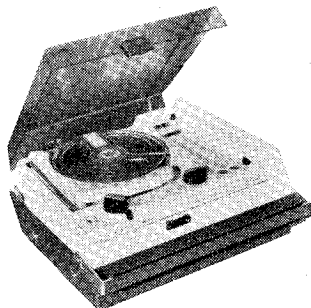

RADIONETTE has 40 years of experience on technical improvements of highest quality. The production line consists of 35 models of portable radios, table- and console-models, TV, tape recorders, amplifiers and mini-jukeboxes – all models great news for music lovers. Export to 60 countries.

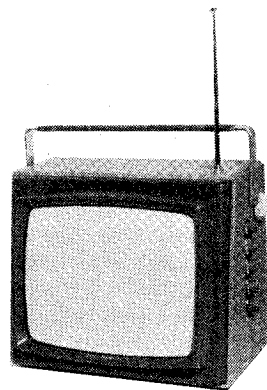

KURER FM DE LUXE in teak

This elegant portable AM/FM model has 4 wavebands. Highest sensitivity and selectivity are the features. Stable reception on FM with AFC. Outlets for mains adaptor, extra speakers and earphones. Special combined models for cars available. Smart cabinets in teak, palisander, black/nickel and pastel colours. 2 different versions: Incorp. long-and shortwave or (export model) 2 shortwave bands, no longwave.

MULTICORDER 4

This portable transistorized tape recorder has entirely new constructions in elegant design. 1 knob for immediate choice of 4 programmes – single reel – 12 hours playing time. Supreme HiFi quality of tone. Battery operated and outlets for mains adaptor. For use everywhere, also in cars.

PORTABLE, FULLY TRANSISTORIZED TV

This elegant compact TV of highest quality has an 11" picture tube. Gives sharp pictures and brilliant sound reproduction – in the home, on the beach – wherever you are. Mains/ battery operated.

IT'S WHAT YOU'VE ASKED FOR...

At last! A quality microphone designed **specifically** for the ham. Incorporates features galore that hams have asked for. Tops in voice punch and intelligibility... and abounding in convenience features to minimize operator fatigue. Great for AM & FM transmission, unsurpassed for SSB. Check these outstanding ham-oriented features:

- "Shaped" response—cuts off sharply above 3000 and below 300 cps with a rising characteristic to the curve: gets the message through with top audio punch!
- Push-to-talk bar-switch with optional locking feature to control relay and mike muting circuits.
- Separate slide-switch gives choice of press-to-talk or VOX operation.
- Exclusive adjustable height stand for fatigue-free operation.
- Rugged Shure Controlled Magnetic element (U.S. Patent 2,454,425).
- Field replaceable cartridge and cable.
- ARMO-DUR case and stand—can't rust, peel, crack, or dent. Always comfortable to the touch.
- Shock proof.

Next Edition to be published mid December 1966. Printed in
Denmark by Det Berlingske Bogtrykkeri, Copenhagen, Denmark.

To WRTH and to its Director, Mr. J. M. Frost, I therefore send all my heartiest wishes that they may continue with increasing success along the road they have chosen thus giving us an always more complete and faithful representation of the world of broadcasting in its rapid evolution and continual development.

GIAN FRANCO ZAFFRANI
Director for Foreign Relations
Radiotelevisione Italiana

It may not, at first sight, seem appropriate to issue a word of warning in a message of congratulation on the occasion of an anniversary. That we associate ourselves with the many messages of goodwill that the WRTH will certainly receive, after twenty years goes without saying.

The growth of the World Radio Television Handbook, from its modest beginnings to the invaluable guide which it has become today, reflects the quite extraordinary development of world communications in one generation.

We have in our hands instruments of tremendous power. It is how we use this power that counts. It is fitting, after twenty years, to pause for a moment to think out clearly where we are going, what we want to achieve and where our responsibilities lie.

One of our important tasks as an international organization is to see to it that the knowledge and experience of each individual country is made known to others. For this, the World Radio Television Handbook is an indispensable tool. But more important, perhaps, is the responsibility we all of us have to guide the movement towards greater communication in the direction of real mutual understanding, real co-operation and effective social and economic advancement.

For let us make no mistake - we are playing with fire - fire that can warm and illuminate, but also fire that can consume and ultimately destroy.

With satellites we shall be reaching the billions - but even today hundreds of millions of minds are open to hear what we have to say. But can we assume, as we do far too easily, that this swifter communication will automatically lead to a better understanding of one another? We have only to look and listen to see how easy it is, in our present day, to propound half truths, to appeal to conformity, to deaden sensibilities, without any time to reflect and to consider. So let us not become the captives of our own ingenuity. The users of the marvellous media at our call have never had a graver responsibility than they have today.

In the same year that Unesco is marking its first 20 years, we extend our congratulations and good wishes to the World Radio Television Handbook on this, its 20th anniversary.

TOR GJESDAL
Dir., Dept. of Mass Communication
U.N.E.S.C.O.

Tor Gjesdal

The very first WORLD RADIO HANDBOOK was dedicated to "international understanding" and each subsequent issue stressed this theme more emphatically and more eloquently. Indeed, the WORLD RADIO TV HANDBOOK made a substantial contribution to the cause of international understanding and co-operation among Nations by its comprehensive coverage of the complex field of Radio and Television. It kept thousands of broadcasters well informed of the latest data pertaining to our rapidly changing field.

On the occasion of the 20th Anniversary of this publication, the Radio & Visual Services of the United Nations Office of Public Information wishes to extend its warmest congratulations to the publisher, editor and the entire staff of the WORLD RADIO TV HANDBOOK. Founded by Mr. O. Lund-Johansen in 1946, the publication was transferred to new owners last year. We know that this fine publication will continue its valuable work for many years to come.

Today, we live in a world of transition and change. Voices of world leaders, transmitted over powerful transmitters travel around the globe in one-seventh of a second, reaching millions of people on every continent.

The heartbeat of a brave space traveller is recorded by a world network of tracking stations while he is travelling through space at 24,000 feet per second. Olympic Games may be watched via a communications satellite at the very moment they occur; a complicated heart operation taking place on one continent may be watched thousands of miles away by groups of doctors on another continent. We have seen "live" TV pictures of the moon's surface; men floating weightlessly in space; sessions of the United Nations Security Council are watched through the communications satellite simultaneously in over 20 countries. On the other hand world news focuses its cameras on bloody revolutions, on overt acts of prejudice and hate. Today, cameras capture pictures of men locked in battle, refugees fleeing from their homes, children begging for food amidst ruin and devastation.

Twenty years ago humanity stood at the threshold of peace and swore: "We the Peoples of the United Nations, determined to save succeeding generations from the scourge of war which twice in our lifetime has brought untold sorrow to mankind..."

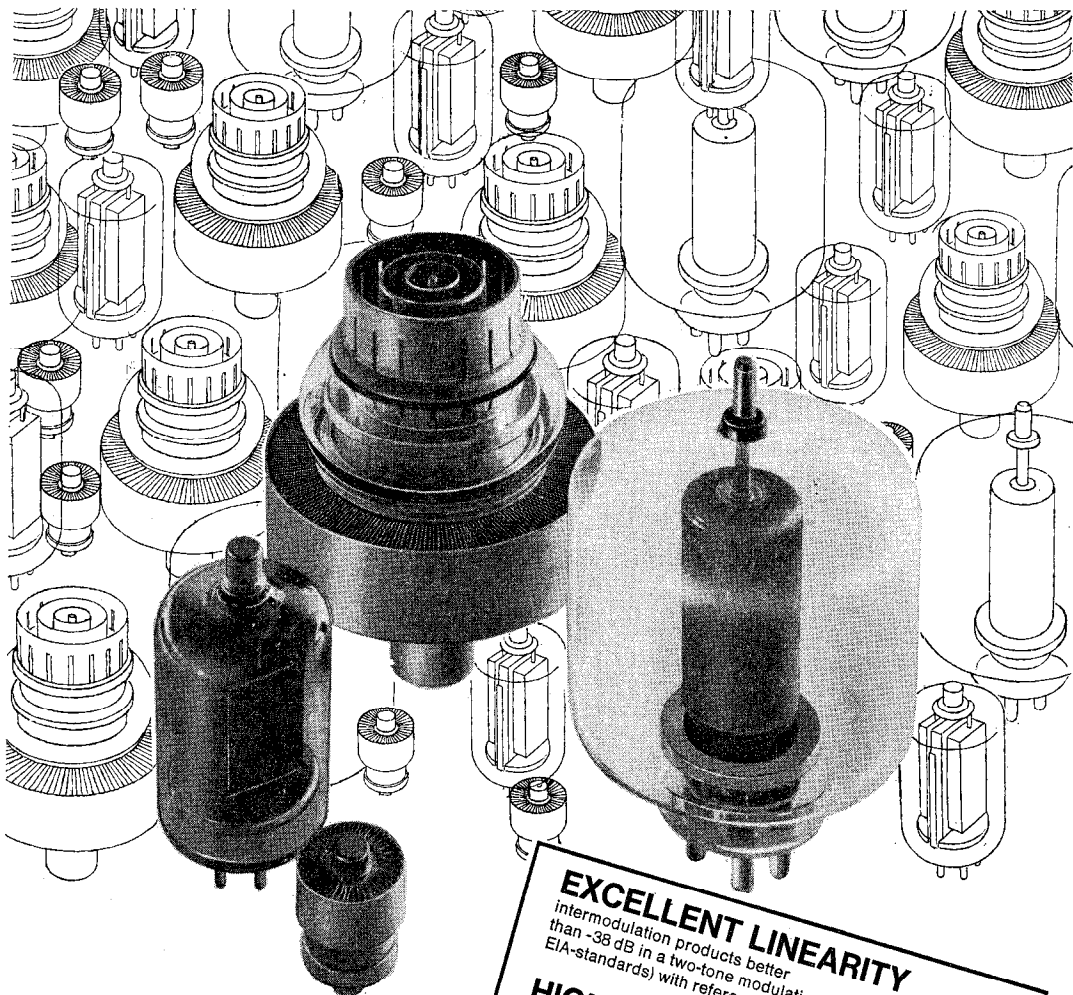

Have we, who work in the field of communications, failed in our task to interrelate the great technological advances with the need to develop our political, economic and social resources? Have we been unable to grasp the complex interplay of forces at work today and to translate them into attitudes and actions for universal peace?

Have we truly used our powerful tools of communications, our space satellites, our masers and lasers, our million watt transmitters for the general good of mankind?

Commemorating the twentieth anniversary of the United Nations, Secretary-General, U Thant, asked during his San Francisco speech:

Josef Nichols

EXCELLENT LINEARITY
intermodulation products better
than -38 dB in a two-tone modulation test (according to
EIA-standards) with reference to either of the equal tones

HIGH EFFICIENCY
up to 45% under two-tone
modulation conditions according to the same EIA-standards

NO GRID CURRENT
even under full-power operating conditions

Now a range of tetrodes.....

SPECIALLY DESIGNED FOR SSB

Philips continuous research in the field of transmitting tubes has led to the introduction of a new range of tetrodes specially designed for SSB, and other applications where excellent linearity is required. Each of these fine tetrodes is now unequalled for performance - proved in practice.

Ask for technical data and verify.

TABLE OF SHORTWAVE STATIONS to the Summer-Supplement 1966.

In order to make this as complete and up-to-date as possible we direct an earnest appeal to **all radio**

stations using shortwave to send us regularly their transmission- and/or programme-schedules.

AM - 10,000 D

The CCA AM-10,000D, 10KW AM broadcast transmitter incorporates features that are standard in all CCA AM transmitters. These include:

Silicon rectifiers with minimum of 200% safety factor; 300% reserve in air cooling; minimum tube costs; low distortion high level plate modulation; automatic overload recycling; minimum floor space; full accessibility with hinged meter panels.

CCA *Quality* AM BROADCAST TRANSMITTERS

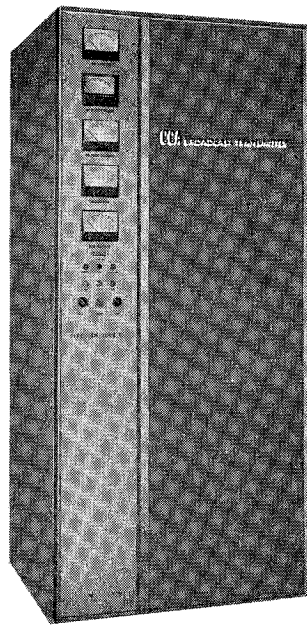

- VLF, MF, HF FREQUENCIES
- EXCEEDS FCC & CCIR SPECS
- ALL POWERS 100 TO 100,000 WATTS
- CONVENTIONAL HIGH LEVEL MODULATION
- CONSERVATIVE — LONG LIFE MODERN TUBES
- EMPHASIS ON STANDARD PARTS
- SILICON RECTIFIERS
- FULL ACCESSIBILITY
- SINGLE CHANNEL
- MULTIPLE CHANNEL PRESET
- MULTIPLE CHANNEL SIMULTANEOUS

CCA *Reliable* VHF FM BROADCAST TRANSMITTERS

- 10 TO 40,000 WATTS
- NO REQUIREMENTS FOR NEUTRALIZATION
- TRUE GROUNDED GRID PA CIRCUITRY
- DESIGNED FOR STEREO AND MULTIPLEXING
- SILICON RECTIFIERS
- MINIMUM TUBE COSTS
- AUTOMATIC OVERLOAD RECYCLING

The CCA FM-10,000D, 10KW FM broadcast transmitter incorporates engineering features which are standard in all CCA FM broadcast transmitters. These include:

Zero bias high mu triodes with grids connected directly to DC ground. This eliminates the requirement for neutralization, RF bypass capacitors and bias supplies. In addition, all transmitters contain silicon rectifiers with minimum of 200% safety factor, 300% reserve in air cooling; minimum tube cost, automatic overload recycling, multiplex and stereo operation.

"Is it really only the scourge of war or the lash of terror that can move us toward the goal of peace and justice in the world? Can we not make the effort to advance out of our own sense of responsibility and knowledge, rather than be driven like refugees before a storm which may be unleashed by our own inability to take hold of the future? I believe not only that we can, but that we must make the effort..."

JOSEF C. NICHOLS
Operations Manager
Radio & Visual Services Division
United Nations

Dr. Ralph Freed

Mid-point in this great decade of the 60's, 1965 will go down in history as a year of unparalleled advancement, particularly in the physical sciences. With successful probes into deep space, multi-manned orbital missions, amazing new aircraft, and a host of other technological developments, it is clear that the spectrum of man's knowledge - even in the last twelve months - has been extended considerably.

With all that has taken place to broaden man's horizons, the role played by communications is a significant one, indeed. In today's scientific world, radio has been thought of as a great medium to impart culture and education. These are worthy objectives, but are not sufficient. Man's spiritual needs must also be met. Thus, the paramount objective of Trans World Radio is to proclaim the eternal truths of God's Word, the Bible.

If mankind is to benefit from the prodigious and remarkable scientific advancements of our time, we must close the "spiritual gap"; we must communicate the message of Christ to meet man's spiritual needs.

This is the mission of Trans World Radio.

DR. RALPH FREED
General Director
Trans World Radio

Yoshinori Maeda

I do not believe that mankind, which has experienced many tragic wars, has ever wished for peace and prosperity so strongly as today. And, I am convinced that mutual understanding and trust among all peoples is the basic factor for achieving such a goal. Needless to say, broadcasting is an excellent medium to unite the peoples of the world and to create a feeling of solidarity among them.

By making full use of such an influential function as broadcasting, we earnestly desire to contribute towards the realization of world peace through the cooperation of broadcasting organizations throughout the world.

It has been said that war is generated in the minds of people and that the citadel of peace is also built in the minds of men. I feel that the broadcasting world should exert its utmost endeavours towards the building of such a citadel.

With the successful TV space relays of the 1964 Tokyo Olympics as a beginning, we have already entered the age of space communications, from which we may safely say that a new era of international relations will surely emerge. It will not be long before we greet the day when news of the world is transmitted to every corner of the globe by means of communications satellites launched by international cooperation. This is the day when Lancelot Hogben's words that for television the entire world is just one area will be literally realized. We eagerly look forward to greeting that day.

With this in mind, we expect that the World Radio TV Handbook, which has marked its 20th anniversary as the world's only Handbook of its kind for international radio and television, will play an important role in advancing the hopes I have just mentioned. I conclude this message by earnestly hoping that your Handbook will make further development.

YOSHINORI MAEDA
President, Japan Broadcasting Corporation (NHK)

Hans Jacob Ustvedt

It should hardly be necessary to emphasize further the increasing importance of television and sound radio in our time, both nationally and internationally. It may be said that the acceleration characterizing the development from year to year is steadily increasing the necessity of close international collaboration. It goes without saying that the conditions in the small countries in many ways differ essentially from those in the bigger ones, but irrespective of this fact, the problems will to a great extent be the same. The need of international contact and with that of personal relations between the broadcasting organisations will consequently be increasing, thus increasing even the value of the WORLD RADIO TV HANDBOOK.

HANS JACOB USTVEDT
Kringkastingsjef
Norsk Rikskringkasting, Oslo

Dr. L. F. Tjijstra

age, if all the road signs and traffic indications were

It is said that silence is the element in which great things fashion themselves. The World Radio TV Handbook must be the exception that proves the rule, for it has been fashioned in an ever-increasing flow of sound that is fast threatening to crowd out the available frequency space and make the short wave bands seem like peak-hour thoroughfares.

Taking this simile further, one wonders what would happen, in this motorized

suddenly to disappear from our highways and byways. Starting out from point "a" would be an adventurous undertaking, but getting to point "b" would lead through chaos.

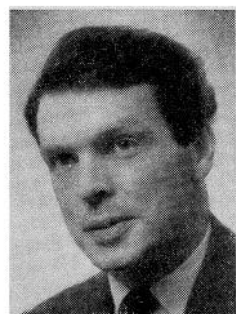

Economists are well acquainted with the fact that filling the needs of society creates further needs. The need to go from point "a" to point "b" created the need for roads, then for vehicles, then for road signs; for railways and airways, and then for time-tables. In like manner did the need to go from point "a" to point "b" via the medium of radio, and later television, create the need for the World Radio TV Handbook. Just as, today, motor traffic would be unthinkable without road signs, so would radio and television, without the World Radio TV Handbook, be like an uncharted sea.

There is another aspect: one affecting short wave radio stations particularly. Whatever the pattern of their programmes, they all have a mission to perform. In the case of Radio Nederland - an independent, non-government organization - that mission is to acquaint listeners in neighbouring and far-off lands of Holland's place in the world; to create and foster goodwill for our country and to serve the interests of Dutch culture, Dutch industry and agriculture, Dutch tourism and Dutch life and thought in every field. The Dutch saying "To be unknown is to be unloved" contains a self-evident truth. That Radio Nederland has only recently been voted a much-loved station proves first and foremost that it is a wellknown station. But that we - and many other stations with us - would be lesser-known were it not for the World Radio TV Handbook, is an undeniable fact. In this respect the publication plays an important part in the "putting over" of our message.

There is another saying: "Of the dead, nothing but good". But the World Radio TV Handbook is very much alive, and so one may presumably speak ill of it! However, the only indication that the Handbook is not all it should be, is that it becomes better each year. But then, so does good wine, and, to quote yet another saying: "Good wine needs no bush".

In this 20th anniversary year of the World Radio TV Handbook it is with pleasure and gratitude that I offer, also on behalf of my Organization, sincere good wishes to the publishers. May the years ahead continue to be years of happy collaboration.

L. F. TIJMSMA
Director-General, Radio Nederland

T. D. R. Thomason

complexities of factors and details which make up the instant mass communications media. The WRTH is an indispensable pocket library which should accompany every radio and television broadcaster wherever he goes.

The awesome scope of radio and television coverage can best be illustrated by observing some of the related facts. Today, there is not a spot on this earth where one cannot pick up a radio signal in one language or another. It won't be long before television coverage will also be complete. There are almost 12,000 radio and television stations around the world. On the other hand, there are less than 8,000 daily newspapers in circulation. Over fifty countries have no daily publications at all! The impact of the spoken word is immediate and widespread, it will take many years before the printed word will find itself in all the nooks and crannies of the world.

The broadcasting media have the power to bring stability to all parts of the world. A recent study of the effects of broadcasting since its start in 1920 has shown that radio and television have played a major part in creating a desire for self-improvement among many people. In other words, broadcasting properly used can be a prime-mover of ideas. That it can also be a mover of products is self evident.

In a profession with such vast responsibilities, it has proven valuable to create a universal professional body to which all radio and television people could belong. The INTERNATIONAL BROADCASTERS SOCIETY was established in mid-1964 and its membership has grown with increasing speed. The WRTH has been one of the outstanding publications which the Society uses constantly.

Broadcasting, with all its applications, can be considered mankind's most powerful tool for the creation of a better world. The creation of the IBS has taken several years of thorough scholastic and practical research. The purpose of the Society is liaison between all persons and organizations concerned in any way connected with the profession. The IBS is the first coordinated attempt to bring unity to the entire profession. It is a huge task requiring regular contact with over 500 continental, national and regional organizations which serve specific interests within broadcasting. With the hundreds of thousands of individuals who have chosen radio and television as careers, it is essential they be able to develop a balanced professional self-awareness. The IBS has a vertical as well as a horizontal membership. The Society recommends the WORLD RADIO TELEVISION HANDBOOK to all its members. It is no coincidence that the Society's belief that "better broadcasting can make a better world" is in direct harmony with the wish of the WRTH: "For the promotion of a better understanding between the peoples of the world".

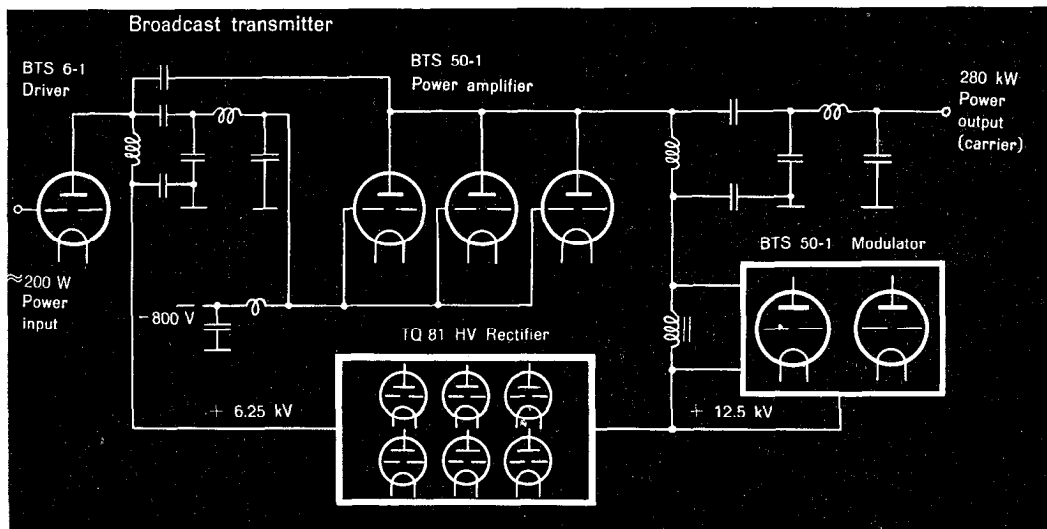

T. D. R. THOMASON
Executive Director,
International Broadcasters Society

HOW TO USE THE WORLD RADIO TELEVISION HANDBOOK

The World Radio Television Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver.

The first section of the Handbook contains instructive articles relating to broadcasting, information regarding broadcasting and television organizations, and popular technical articles and tables of practical value to listeners.

The main section of the book (pages 94-248) contains detailed information, by country, of the **Radio Stations** and broadcasting organizations of every country in the world, including names and addresses of broadcasting companies, names and titles of leading officials, lists of broadcasting stations in each country, including frequencies, wavelengths, transmitter power, call signs (if used), and station names. Program information is also listed, including times, frequencies, and beam areas of the broadcasts in each language. The announced **location** of the st., rel. st's exc., is usually the studio and administrative location, since the tr's are often located in outlying areas. - **Power** is stated in kilowatt (kW) or Watt (W). When two powers are listed, the figures represent the lower and upper limits of power, where a station uses more than one tr. on the frequency at different times (s.w.) or varies the power of the tr. for day and night operation (m.w.).

A **listing by frequency and wavelength** of the shortwave stations of the world, and long and medium wave stations of Europe, North Africa, Near East is presented in the last part of the Handbook, for use in facilitating the identification of stations.

Abbreviations: See page 74 for explanation.

Short-wave stations may be used either for domestic broadcasting to listeners in the same country or for international broadcasting directed to listeners in other countries.

International short-wave stations usually employ directional antennas to beam their programs to particular areas on frequencies calculated for best reception. Most international broadcasts are scheduled for the evening hours in the intended reception area, but some are in the morning or at other times during the day. The reception areas give their names to the services: European Service, Far Eastern Service, North American Service, etc. Languages employed are those of the listeners in the area to which the broadcast is directed, also the language of the transmitting country for reception by persons understanding that language.

Best reception is usually obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas, and sometimes, even of programs directed to distant parts of the world. Shortwave propagation conditions change continually because of the influence of daylight and darkness, seasonal effects and solar activity. Consequently, good reception requires frequency change from time to time.

See article Radio Broadcast Reception Conditions on pages 34 and 36.

Domestic short-wave stations are usually of lower power than international stations, and generally use non-directional or wide beam antennas, in order to reach local or national audiences. These stations make fewer seasonal frequency changes, and many operate on the same channel for both day and night operation. The stations are utilized to reach areas

of a country where coverage by medium and long wave stations is not adequate.

Long and Medium wave stations are used mainly for transmitting programs to listeners in the country in which the stations are located. These stations vary from powerful transmitters capable of being heard throughout the country to low power stations intended only for a small area in the vicinity of the transmitter.

FM (Frequency Modulation) Stations operate on very high frequencies (VHF); ranges of 88-108 Mc in the Americas and 87-100 Mc in other areas, and provide interference-free reception over a short radius. Most FM stations relay programs of a medium or long wave station.

Frequency and Wavelength - Frequencies are measured in kilocycles per second (kc/s) and megacycles per second (Mc/s). A kilocycles is 1000 cycles. A megacycles is 1000 kilocycles. Wavelengths are measured in meters.

A formula between frequency and wavelength is as follows: Frequency (kc/s) $\times$ Wavelength (m) = 300000. Wavelength (m) = $\frac{300000}{\text{Frequency (kc/s)}}$ and Frequency (kc/s) = $\frac{300000}{\text{Wavelength (m)}}$.

Due to the propagational conditions, interference by other stations, jamming, malfunction of transmitter, reallocation of frequencies by a country or convention, or for some other reason, stations may use frequencies which are at variance with the frequency(ies) indicated in this handbook.

Program times used in the listings are based on the 24 hour clock. Midnight is 00.00 hours, 3 a.m. is 03.00 hours, 9 a.m. is 09.00 hours, and midday is 12.00 hours. Then, instead of starting another 12 hour cycle (p.m.), under the 24 hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hours, 10 p.m. is 22.00 hours, and so on until 23.59 (11.59 p.m.) is reached and a new 24-hour cycle starts. This system eliminates any confusion between times a.m. and p.m.

Time Conversion: All programs are listed in GMT (Greenwich Mean Time). To convert from GMT to your local time, refer to the World Time Table on page 72 to determine how many hours your time is ahead or behind GMT, and add or subtract that amount in order to convert to your clock time. For quick conversion, it is useful to write the GMT hours, 00 to 24, down on one side of a sheet of paper, and then enter the correct local time opposite each GMT hour. Summer time or Daylight Saving time, adds an hour to local time, so this should be taken into account in countries where it is utilized.

Program schedules: The program schedules of many countries are divided into Home Services and Foreign Services. The Home Service programs are arranged by language and by program services or networks. The Foreign Service transmissions are generally arranged by beam area, and by language for each beam area. The times and frequencies of the programs in each language are listed together, in order to facilitate the determination of the times and frequencies of the broadcasts in each language. The times of news broadcasts and other program features are also included.

Therefore, if you wish to hear a broadcast in a particular language from a country, refer to the listing for that country of the time and frequency of broadcasts in that language. Most broadcasts are transmitted on more than one frequency, so try the

Continuous front-panel tuning

...exclusive in Gates' 50 KW and 100 KW high-powered, short-wave broadcast transmitters

The unique design of the Gates Model HF-100 and Model HF-50C high-frequency broadcast transmitters incorporates one tuned line tank circuit. This permits continuous coverage without the inconvenience of plug-in coils. Both transmitters are air cooled, employ high-level plate modulation and use dependable long-life silicon rectifiers. Compact size permits installation in a minimum of floor space.

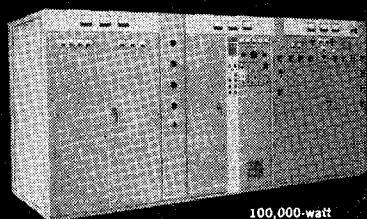

Field proven, these short-wave transmitters are built for continuous operation under extreme environmental conditions, and assure an operating economy second to none.

With seven models, from 1 KW to 250 KW, Gates offers the world's most complete range of high-frequency broadcast transmitters. Write for individual technical brochures.

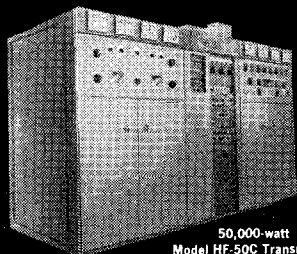

The table below illustrates the completeness of the
Gates HF broadcast transmitter line.

Power Output	250 KW	100 KW	50 KW	20 KW	10 KW	5 KW	1 KW
Model	HC-114*	HF-100	HF-50C	HF-20B	HF-10B	HF-5B	HF-1M
Frequency Range	3.95-26.5 mc	3-26.1 mc	3.9-30 mc or 3-26.5 mc	2-22 mc or 4-22 mc	2-22 mc or 4-30 mc	2-22 mc or 4-30 mc	2-32 mc

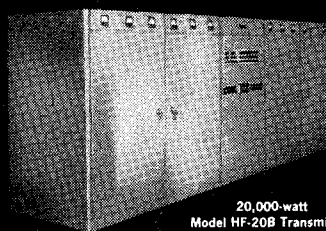

*The HC-114 is automatically tuned to any one of 20 preset frequencies.

HOW TO USE *(continued from page 16)*

various frequencies listed, to determine which one is received best at your location.

Identification of Stations: Most stations in Europe, Middle East, Africa and Asia identify by announcing their station name and location. Most stations in North America and Pacific (incl. Australia/New Zealand) identify by the use of a call sign of three to five letters or a combination of letters and figures, of which the first, or first two, denote the nationality in accordance with the international list of prefixes. Most stations in Latin America use a call sign (sometimes not frequently announced), a station name, and location.

In addition, many stations use musical interval signals at sign on and between programs, in order to help listeners to find the station on their dial and identify it as the desired station. These interval signals are included in the country listings.

How to identify a Station by Frequency or Wavelength: When you hear a station that is unknown to you, first try to determine some clue to its identity by attempting to determine the language, noting the type of program, etc. Then, note the approximate frequency or wavelength indicated on your dial, and turn to the table "Short-wave Stations of the World" in the back of the Handbook, and ascertain what stations operate in that vicinity. Next, check the program listings to determine which of the stations are scheduled to operate at that time of day, and which are most likely to be audible at your location, depending on the power and distance away. For definite confirmation, it is desirable to wait for station announcement or interval signal.

Frequency Changes: The frequencies listed are those which were scheduled for use at the time of publication. However, due to a number of reasons, including interference and changes in propagation conditions, it may be necessary for a country to make frequency changes. Often only one of the frequencies on a program will be changed, so the new frequency can be determined by tuning in the other frequencies and listening for the announcement of the frequencies being used. Reference to a publication listing the latest frequency changes for the International Stations: the **Summer-Supplement to the WRTH** (published by mid June each year) or a monthly short-wave listeners publication issued in your country, is also helpful.

Interference: Due to the present crowded condition of the medium and short wave broadcasting bands, interference may be encountered from other stations operating on the same or closely adjacent frequency. In addition to interference from other broadcast stations, there may also be interference from "jammers", which transmit a variety of noises in an attempt to prevent certain foreign broadcasts from being heard in the country operating the jammers. When interference is encountered, try another of the listed or announced frequencies, if several are in use, or try a broadcast at another time.

Reception from Hard-to-Hear Countries: If you wish to hear a station or program from a particular country, refer to the listing from that country, determining first whether it has any broadcasts beamed towards your area or adjacent areas, if not, refer to the frequency, time and power listing to determine where and when reception might be pos-

sible. Also, note the bands and times when stations in other countries in that part of the world are audible. It is possible to hear many far distant stations, even if they do not beam programs to your area, by listening when the propagation and clearness of channel conditions are favorable.

Verification by QSL-cards: As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL card (verification) or letter. Most international broadcasting stations do not require enclosure of return postage and will reply with a QSL card or letter. Domestic broadcasting stations do not normally request reports from foreign listeners, so return postage should be sent with reports to these stations. Return postage should be sent in the form of an International Reply Coupon (IRC), obtainable at post offices in most countries. Reports should be sent to the station address given in the country listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

Reception reports are useful to radio engineers in selecting the most suitable frequencies for broadcasts beamed to your area. Reports are preferred in the SINPO code, which is as follows:

S (Signal Strength)	I (Interference)	N (Noise)	P (Propagation Disturb.)	O (Overall Merit)
5 excellent	5 nil	5 nil	5 nil	5 excellent
4 good	4 slight	4 slight	4 slight	4 good
3 fair	3 moderate	3 moderate	3 moderate	3 fair
2 poor	2 severe	2 severe	2 severe	2 poor
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable

Information about **Television Stations** is provided in the section following the radio section, including names and addresses of Television companies, location, power and channel of Television stations, and program schedules of these stations.

With reference to the first Television page we give a short explanation of some of the technical words and figures mentioned—The announced **location** of the station is usually the studio location, since most TV tr's are situated upon the highest location in the area in order to obtain more widespread coverage—Two systems of **modulation** are used to transmit the audio signal of the TV st's either frequency modulation (FM) or amplitude modulation (AM). All video transmissions are normally amplitude modulated—**Polarization** signals are horizontally polarized (H) or are vertically polarized (V). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards required by the government of the country in which the st. is located—The **band width** is shown in Mc and represents the limits within which both the video and audio tr. are contained—**Number of lines** transmitted express the number necessary to form one complete frame or picture, and **frames** state the number of times per second the picture area is completely scanned—**Video and Audio Power** is indicated in kilowatt (kW) or Watt (W). In the most cases the figures denote the effective radiated power (ERP) due to the stations antenna system—**Video and Audio Frequency** is stated in Mc per sec. The relationship between the quoted figures and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the resp. countries.

TWENTIETH ANNIVERSARY MESSAGES TO WRTH

Henrik Hahr

an operational programmes organisation with all the relevant consequences in the technical, legal, administrative and accounting field. The increase in the number of television services connected to the Eurovision network, the introduction of 2nd and 3rd Television Programmes in several countries and the introduction of intercontinental transmissions are some new important factors. The World Radio TV Handbook tries to sum up in an efficient and accurate way the actual situation and the trends of tomorrow and it is consequently to be congratulated on the services it is rendering experts and students of this important means of communication.

HENRIK HAHR
*Director of the Administrative Office of the
European Broadcasting Union, Geneva*

"I would like to congratulate most warmly all those who have been directly responsible for the preparation and publication of the Handbook on 20 years of service to broadcasters, listeners and viewers throughout the world.

During this time WRTH has played an unobtrusive but invaluable role in bringing the messages of many different broadcasting organisations to the ears—and eyes—of millions of people both near and far. And by providing so much information vital to our day-to-day activities, it has proved to be a virtually irreplaceable aid to all those of us associated with or interested in the field of broadcasting.

On behalf of the NZBC I take this opportunity of wishing WRTH continued success in the years ahead—may its next 20 years be as worthwhile as the 20 years just past."

G. H. STRINGER
Director General, New Zealand Broadcasting Corp.

Gerald C. Gross.

In sending our congratulations to the Handbook on this occasion, I do not think that it is premature to hope that it too will one day be celebrating its Centenary.

GERALD C. GROSS
*Secretary-General
International Telecommunication Union*

The World Radio TV Handbook gives an excellent survey of the activities of the broadcasting organisations around the world. It shows the development and growth of our electronic media. For the European Broadcasting Union (EBU) it is essential to follow by various methods what is happening in the broadcasting field as the EBU itself reflects the achievements in many broadcasting services. It is interesting to note in this respect how the EBU from being an international organisation mostly dedicated to discussions and consultation on the actual policy to be held on general problems has in these five years become more and more

Years ago the World Radio TV Handbook introduced me to broadcasting. Its pertinent facts and figures helped to build up my own picture of the world of sound broadcasting.

During the planning stage of Station ETLF and ever since Radio Voice of the Gospel went on the air in early 1963, the Handbook has constantly been within close reach.

DR. SIGURD ASKE
Director General Radio Voice of the Gospel

On the occasion of 20th Anniversary of World Radio TV Handbook I send you my sincerest congratulations and the best of wishes for continual success.

To speak again of the importance of Radio and Television is repeating over and over again what has already been widely known all over the world. However, I cannot refrain myself from saying that this medium plays a vital role in the different fields of Mass Communications and in establishing better understanding among peoples of all nations.

In having such a Handbook as World Radio TV Handbook at hand, with all the information one is in need of, it is so easy to comprehend the facilities given to all who work in this medium to get in touch with the various organisations.

May World Radio TV Handbook continue to be a valuable guide to those working in Radio and Television, and go on as always treading the path of success.

A. YOUNES
Secretary-General URTNA

Now in its second year of providing a unifying force linking every major listeners club on this continent, the Association of North American Radio Clubs offers heartfelt congratulations to World Radio TV Handbook on the publishing of its 20th Anniversary jubilee edition!

Over the years, WRTH has continued to expand the size and scope of its publication, always with the purpose of creating a practical tie between the various broadcasting organizations and radio listeners. Just a decade ago, in a foreword written in the 1956 WRTH, the director of the European Broadcasting Union cited the publication for the progress made in the first ten years. L. Wallenborn pointed out, however, that with the expanding potentialities of the broadcasting field, "the World Radio Television Handbook has also therefore still before it a life full of promise."

We, of ANARC, are pleased to note that during the past ten years, this prediction has certainly come true. Further, looking forward to the years ahead, we feel sure that WRTH will continue on the same upward path, providing the listeners of North America and the world with a publication so invaluable.

DON JENSEN
*Executive Secretary,
Association of North American Radio Clubs*

On the occasion of the twentieth anniversary of the World Radio Television Handbook, I should like to add my voice to the multitude of others coming from various nations of the world, felicitating the Handbook on the completion of two decades of significant service in the cause of international broadcasting.

During the two decades of its existence the World Radio Television Handbook has made distinctive and significant contributions to the cause of international broadcasting. In handy and compact form it packs a wealth of detailed information. Anyone associated with the field of international broadcasting—whether secular or religious—finds this an invaluable and helpful tool.

We congratulate the World Radio Television Handbook on its twentieth anniversary, and commend it to hosts of others dealing with radio and television on an international basis.

May the Handbook continue to make its important contribution toward a better understanding between various nations of the world, and toward better cooperation between radio and television stations in various lands.

Hearty congratulations on a significant milestone!

EUGENE R. BERTERMANN
President, National Religious Broadcasters

All those who are familiar with the World Radio/TV Handbook will agree that it is a most excellent and valuable publication edited with extraordinary care and containing a remarkable amount of detailed information. They may perhaps be surprised and interested to learn that it is already twenty years old, and I can well imagine that like me they will be wondering how they managed before it existed. In my work as Head of Overseas & Foreign Relations in the BBC I have continual need to refer to it on some detail or other, and indeed in my department and in many others too it is in almost daily use. But clearly it is also a most attractive book for all those who take an interest in broadcasts from countries other than their own, and whose interest extends to the organisations behind the programmes they hear. I should like to congratulate the World Radio TV Handbook on a most successful past twenty years and wish it the best of luck for the future.

DONALD STEPHENSON
Head of Overseas and Foreign Relations,
British Broadcasting Corporation, London

René Marchand

The World Radio Television Handbook has always been providing us with all necessary and up-to-date information regarding organizations, external broadcasts and most eminent staff members of world radio and television services. I think all this is of great importance in the field of our worldwide cooperation and helps us in establishing mutually advantageous relations with each other.

The Hungarian Radio and Television was always glad to take advantage, with pleasure and confidence, of this unparalleled reference service which proved to be indispensable for professional orientation indeed.

I express my best wishes for a continued service of World Radio Television Handbook, as successfully as it was during the past 20 years, trusting that its growing activity will bring further contribution to a better understanding and cooperation among broadcasting and television organizations.

MRS. VALERIA SZARKA
Head of Foreign Relations Service
Hungarian Radio and Television

Zwei Dezennien sind vergangen, seit dem das World Radio TV Handbook zum ersten Mal erschien, und es ist uns ein angenehmes Anliegen, Sie zu diesem verdienstvollen Jubiläum zu beglückwünschen.

Mit seinen vielfältigen und exakten Angaben in seiner Übersichtlichkeit und mit seinem sorgfältigen Druck besitzt das World Radio TV Handbook einen hohen und steigenden Informationswert. Wir haben ihn in den weit über zehn Jahren, in denen wir zu Ihrem Leserkreis gehören, kennen und schätzen gelernt.

Angesichts der raschen quantitativen und der qualitativen Veränderungen im internationalen Rundfunkwesen gebührt Herausgeber und Redaktion besonderer Dank für Ihr geführtes Bemühen, jede Ausgabe dem allerneuesten Entwicklungsstand anzupassen. Dabei finden unser Interesse vor allem die Veröffentlichungen über die außereuropäischen Rundfunkorganisationen und -stationen, die vornehmlich im letzten Jahrzehnt entstanden oder sich entwickelten und in ihren Hörbereichen zu unentbehrlichen Vermittlern humanistischer Bildung wurden.

Das World Radio TV Handbook ist uns nicht zuletzt deshalb zu einem ständigen Begleiter bei der täglichen Arbeit geworden, weil wir in ihm einen Mittler in den Beziehungen zwischen vielen Rundfunkanstalten sehen. Bei der edlen Aufgabe des Rundfunks, völkerverbindend zu wirken und Verständnis für einander zu wecken, möchten wir es als Helfer nicht missen.

Es ist uns darum eine Freude, Ihnen auch für das nächste Dezennium des World Radio TV Handbook recht viel Erfolg und auch persönliches Wohlergehen zu wünschen. Und wir bitten Sie, es mehr als einen Akt der Höflichkeit zu betrachten, wenn wir uns gestatten, in diese Wünsche alle anderen am Zustandekommen des World Radio TV Handbook Beteiligten mit einzuschließen.

MATHIAS MÜLLER
Direktor für Internationale Verbindungen
Deutscher Demokratischer Rundfunk

We advertise in your publication because it is a worldwide publication reaching all persons engaged in broadcasting both in engineering and production.

Since we are an international company it is necessary for us to keep our name before all persons concerned with broadcasting throughout the world. This we do in several ways one of which is by advertising in World Radio Television Handbook.

A.E. Oates, Press & Publicity Manager
EMI ELECTRONICS LTD, England

Le développement "explosif" de la radio et de la télévision en Afrique, qui ressort si nettement à la lecture des dernières éditions du WRTH est, à nos yeux, non seulement un signe évident de la vitalité actuelle de notre continent, mais encore la promesse d'un avenir riche de réalisations utiles.

Ce qui frappe avant tout lorsqu'on considère le fonctionnement des stations de radio-télévision en Afrique, c'est que, contrairement à ce qui s'est passé dans d'autres régions en voie d'équipement, ces mass-media n'ont pas été asservies à des fins commerciales. Très tôt, des responsables ont su discerner quel

extraordinaire outil de développement pouvait être les techniques de radio là où les routes, les livres, les sources d'énergie, les maîtres aussi sont en nombre insuffisant. Très vite, quelques pionniers ont su démontrer que la radio devait être un investissement rentable - d'autant plus rentable que son rôle s'articulait dans un plan de développement national (et à cet égard l'action des hommes de la Société de Radiodiffusion de la France d'Outre-Mer et de la Radiodiffusion - Télévision Française nous paraît avoir eu, en maints endroits, une valeur exemplaire).

C'est sur le plan proprement politique, sans doute, que l'activité de la radio-télévision en Afrique a été la plus notable. Elle seule, par son omniprésence, a permis de resserrer les unités nationales. Elle seule peut sauver et enrichir les particularités locales, qui toutes ensemble forment la personnalité du continent, et les intégrer dans les grandes unités géographiques, culturelles, économiques et politiques qu'exige notre temps.

Bien sûr, le tableau a ses zones d'ombre. L'instrument magique n'a pas eu des effets bénéfiques: trop de gouvernants l'ont utilisé à des fins contestables et, pour parler net, n'ont vu en lui qu'un moyen de porter la subversion chez le voisin. Cela est indéniable. Mais, comme on dit, "le remède est dans le mal lui-même" et le temps de la subversion s'achève: la multiplication des stations d'émission, donc des sources d'information auxquelles l'auditeur peut se référer pour se faire une opinion, s'accompagne partout d'un accroissement de la démocratie. Nul doute que le progrès technique, en augmentant le nombre de récepteurs simples, bon marché, en déversant partout le son et l'image venus de partout, accélérera encore le processus.

C'est en partant de cette analyse des faits et des perspectives que l'O.R.T.F. a conçu son action à Djibouti. Dans notre région déshéritée, où la seule richesse est constituée par le travail et la dignité des hommes de nos diverses communautés, il importe que notre action soit tout entière "au service de l'homme" - pour reprendre la belle expression du Président de Gaulle - C'est là notre but et c'est là; notre justification.

RENÉ MARCHAND
Chef des services de l'O.R.T.F. à Djibouti

Considero que la tarea de cooperación internacional que significa la sola simple edición del WORLD RADIO TV HANDBOOK es suficientemente importante por sí misma y lo que aún es más admirable, es la tenacidad en la continuidad de la diferentes ediciones anuales y del suplemento de verano.

Tal vez solo sea necesario pedir a las emisoras de los diferentes países una mayor exactitud en los datos que facilitan al WRTH, ya que aunque por lo general resulten exactos, no lo es así en lo que a su totalidad se refiere, juicio crítico que creo bueno hacer en beneficio de todos.

El hecho de poder consultar un anuario como éste y conocer con claridad las diferentes gamas de onda en que trabajan todas las emisoras del mundo, es demasiado interesante para no insistir en este aspecto de la cuestión.

ANIBAL ARIAS RUIZ
Jefe del Centro de Producción de Programas
de Radio Nacional de España

Wir inserieren im World Radio TV Handbook, weil wir hoffen, uns auch auf diesem Wege bei den Rundfunk- und Fernseh-Sendegesellschaften des In- und Auslandes in Erinnerung zu bringen.

RX.11 RECEIVER

Complements in communications

In a modern radio link station all equipment must of necessity be to a uniformly high standard of quality. A transmitter with its frequency controlled by a high stability synthesizer must be matched with a receiver of similar stability. STC supplies HF transmitting and receiving equipment to this high standard. The QT.3-A/4 10kW linear amplifier, the RX.11 receiver with motorized a.f.c., the ancillary equipment, all designed for exceptional reliability and maintainability. Both transmitter and receiver have facilities for autotune with either local or remote control. Maximum ease of operation is combined with minimum need for servicing.

10kW ISB AND GENERAL PURPOSE AMPLIFIER TYPE QT.3-A/4

- Frequency range 2.5-28 Mc/s
- Suitable for telephony and single or multichannel telegraphy
- Automatic tuning
- S.W.R. monitoring
- Rapid fault-location
- Automatic tuning and loading correction
- Manual tuning facility incorporated
- Requires front access only for operation and maintenance.
- Solid-state logic circuits used for most of the power and tuning control systems
- Meets CCIR requirements

SINGLE PATH OR DUAL DIVERSITY RECEIVER TYPE RX.11 SERIES

- Frequency range 2-4-30 Mc/s
- Frequency stability better than 1 in 10⁷ per week variable in 100c/s steps
- Tunes to within 1c/s by motorized a.f.c.
- Facility for the pre-selection of 10 spot frequencies
- Fully transistorized
- Provides the following services: A1, A2, A3, A3A, A3B, A3H, A4A, A7A & B, A9B, F1, F4 Others to special order
- Modular construction
- Local or remote control configurations to suit the requirements of the individual user
- Automatic mute on error count basis with telegraphy reception
- Monitoring facilities incorporated

THE CHOICE OF BROADCASTERS EVERYWHERE...

RCA BROADCAST TUBES FOR LONG

LIFE, OPTIMUM PERFORMANCE

Whether you concern yourself only with audio, or with audio-visual applications, there's an RCA Power Tube or Imaging device for every broadcast need. RCA-devised techniques developed for space-age applications are being employed to advantage in all RCA Tubes to optimize their usefulness in broadcasting.

SMALL POWER TUBES. Shown is RCA-6146, a typical example of an RCA Beam Power Tube. It is part of a line of small power tubes for design and replacement in transmitter applications for CW, AM, or SSB. The RCA line, including both glass and ceramic-metal types, offers a wide choice of input and output ratings for use over a wide frequency range. Other popular small power tube types are: RCA-807, -813, and 866A.

LARGE POWER TUBES. Shown is RCA-6166A/7007. Continuing search for tube betterment has increased the life expectancy and improved the performance of RCA-6166A/7007, an example of design and performance available in a wide choice of broadcast tubes for audio and video service at VHF and UHF.

INDUSTRIAL RECEIVING TUBES. Shown is the RCA-6080. Numerous designs offering operating efficiency, high reliability, compactness, and long life are available for new designs or direct replacement.

IMAGE ORTHICONS. Shown is the RCA-5820A, typical of the RCA Image Orthicon line whose performance rivals that of any on the market today. For color and black-and-white pickup—studio or outdoor—you can always be sure of improved background uniformity, higher signal output levels, higher signal to noise ratio, reduced microphonics, and improved sensitivity. Other popular types: RCA-7293A and -7295A.

VIDICONS. Shown is RCA-7735A. RCA has vidicons for every TV application. In the industry's broadest line of types, you can find a size, sensitivity, and range of electrical characteristics to meet color and black-and-white TV pickup requirements exactly. Custom types, too.

MAGNETIC RECORDING TAPE. You get Red Seal quality sound in RCA's scientifically-processed magnetic tape, available in lengths and thicknesses and base materials to suit your professional recording needs. Available for home use as well.

Additional information on these products is available through your local RCA Distributor. For technical bulletins on Power Tubes, Vidicons and Orthicons, write to: Advertising Department, RCA International Division, Section 200, Clark, New Jersey, U.S.A.

UNION OF NATIONAL RADIO AND TELEVISION ORGANISATIONS OF AFRICA (URTNA)

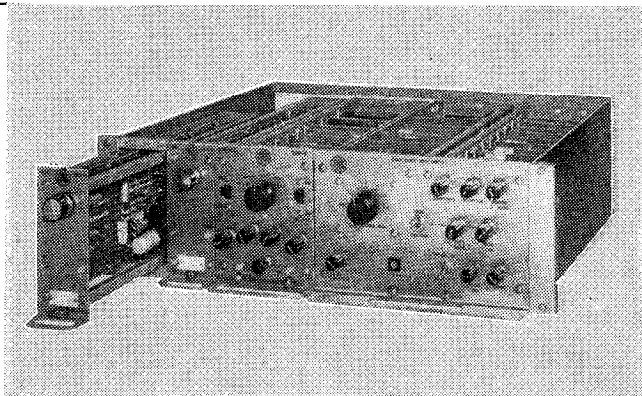

URTNA is a Union of National Broadcasting Organizations of all independent Africa, its aims, under article 2 of its statutes are: - "The U.R.T.N.A. has no commercial aims. Its objects are: -

(a) To support in every field the interests of those African organisations operating radio and or television services that have accepted the present statutes and to establish relations with other international organisations.

Australia's largest manufacturer of Broadcast and Television Equipment

AWA manufactures a comprehensive range of broadcast and television transmitters. Two out of every three broadcasting stations in Australia and New Zealand have been designed and built by AWA while over 100 television transmitters have been supplied, or are on order for Australian and overseas stations. As a major manufacturer in this field the Company can offer a wide range of the latest transistorised sound and vision equipment.

TOP: 24 Channel transistorised sound control console.

BOTTOM: Transistorised studio vision equipment.

Secretary-General: Sir Charles Moses, C.B.E. Full Members: Radio Afghanistan, Australian Broadcasting Commission, Broadcasting Corporation of China, All India Radio, Nippon Hoso Kyokai, Korean Broadcasting System, Radiodiffusion Nationale Lao, Radio and TV Malaysia, Radio Nepal, New Zealand Broadcasting Corporation, Radio Pakistan, Philippine Broadcasting Service, Radio and TV Singapore, Radio Thailand, Tonga Broadcasting Commission, Turkish Radio and TV Corporation, UAR Broadcasting Corporation, Radio Viet-Nam, Samoan Broadcasting Service.

Associate Members: Federation of Australian Commercial Broadcasters, Radio Brunei, Canadian Broadcasting Corporation, Fiji Broadcasting Commission, Office de Radiodiffusion Television Française, Radio Hong Kong, Hong Kong Commercial Broadcasting Co. Ltd., Nigerian Broadcasting Corporation, British Broadcasting Corporation, Independent Television Authority/Independent Television Companies Association Ltd. (U.K.), Columbia Broadcasting System (U.S.A.), National Broadcasting Company (U.S.A.), National Educational Television (U.S.A.), U.S. Information Agency, Time-Life Broadcast Inc. (U.S.A.).

The ABU is a Union of national broadcasting organisations in the Asian/Pacific region which was formally established on 1st July, 1964, following five Asian Broadcasters' Conference held between 1957 and 1963 in Tokyo, Kuala Lumpur and Seoul. The first annual General Assembly of the ABU was held in Sydney in November, 1964, and the second, attended by delegations from 25 members, in Tokyo in October, 1965.

Publications: ABU Newsletter (Monthly in English).

INTERNATIONAL BROADCASTERS SOCIETY (IBS)

Headquarters: 78 Zwaluwaan, Bussum, the Netherlands. (Tel: 02959-10005).

Office for USA: 380 Lexington Avenue, Suite 303, New York City, N.Y., USA 10017. Telephone: 212 - MU 2-4500.

Nature: The IBS is a world body. It is a non-profit professional fellowship created to serve the needs of all persons and organizations everywhere concerned in any way with radio and television broadcasting.

The IBS functions as a permanent forum for maintaining liaison. It interprets the meaning of the word liaison in the broadest possible manner.

To fulfil its function as a universal professional body, the IBS has a vertical as well as a horizontal membership structure. All interested parties in broadcasting may belong, parallel with membership in other associations and federations.

There are three main types of membership. (i) Corporate, (ii) Personal and (iii) Free Exchange. Corporate membership is open to every radio and television station in the world as well as related industries. Personal membership is open to anyone in anyway concerned with radio and/or television broadcasting. Free Exchange Membership is offered to every association and federation in the world, in any way concerned with serving broadcasting interests.

Purpose: The IBS draws attention to the wide variety of opportunities and services rendered by the specialized federations and associations. It encourages professional self-awareness and continuing self-improvement in the use of radio and television media. Under no circumstances does the Society duplicate the services of other organizations.

Governing Body: The IBS is governed by a Board of Directors elected by the General Assembly which consists of the total membership. The Board of Directors consists of sixteen members, who divide the various responsibilities among itself. The Executive of the Board consists of three members; the President, the Executive Secretary and the Treasurer. The Board of Directors of the Society appoints an Executive Director to administer the day-to-day operation of the IBS. The position of President is temporarily vacant. T. D. R. Thomason is Executive Director and Treasurer. Berthe A. Beydals is Executive Secretary. Members of the Board include: O. R. de Baer, Paris, France; Berthe A. Beydals, Bussum, Netherlands; Boris Burkov, Chairman of the Board, Novosti Press Agency, Moscow, USSR; Dr. E. R. Bertermann, President, National Religious Broadcasters, St. Louis, Missouri, USA; Stephen A. Cislser, President, Radio WLVL, Louisville, Kentucky, USA; Oleg Feofanov, Editor, Novosti Press Agency, Moscow, USSR; Lic. José Luis Fernandez, former President of A.I.R., Mexico City, Mexico; François Gromaire, O.R.T.F., Paris, France; Prasong Hongsanand, Managing Director, Thai Television, Bangkok, Thailand; Walter A. Keers, E.E.C. Information Office, Bruxelles, Belgium; Dr. Marvin H. Rimmerman, Radio & TV Department, C.M.S.C., Warrensburg, Missouri, USA; Mons. José J. Salcedo G., Director-General, Accion Cultural Popular, Bogota, Colombia; Timothy D. R. Thomason, Bussum Netherlands; Lance Tschannen, Swiss Broadcasting Corporation, Bern, Switzerland.

Relations: The Society invites the participation of all persons and organizations concerned with broadcasting everywhere. Further information available upon enquiry to either of the IBS offices.

COMMONWEALTH BROADCASTING CONFERENCE

Members: the national public service broadcasting organizations which are responsible for the planning and presentation of the broadcast programmes of independent Commonwealth countries.

The Sixth Conference, held in Nigeria in September 1965, was attended by the chief executives and others from the following organizations: Australian Broadcasting Commission, British Broadcasting Corporation, Canadian Broadcasting Corporation, Ghana Broadcasting Corporation, Jamaica Broadcasting Corporation, Malawi Broadcasting Corporation, Malta Broadcasting Authority, New Zealand Broadcasting Corporation, Nigerian Broadcasting Corporation, Radio Ceylon, Radio & Television Malaysia, Radio Tanzania, Radio Uganda, Sierra Leone Broadcasting Service and Voice of Kenya.

The Conference, recognizing the urgency of providing adequate programme, engineering and management training to keep pace with the general expansion of radio and television staff and services throughout the Commonwealth, established a Permanent Study Group on Training. The initial members are the Nigerian Broadcasting Corporation (which was host and organizer of the Conference), the Australian Broadcasting Commission, the Canadian Broadcasting Corporation, Radio & Television Malaysia and the British Broadcasting Corporation, which will chair the Group. The Conference further reached agreement in principle that, as a profession, broadcasters should seek an increasing measure of responsibility for recruitment into, and control of appointments within, the profession, wherever that had not yet been achieved.

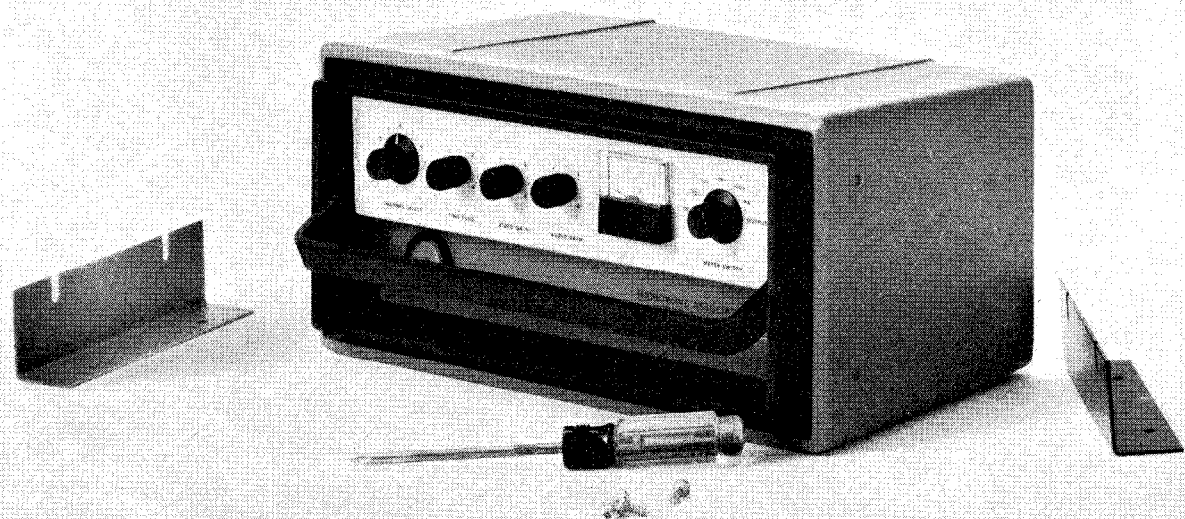

The Conference decided on means of extending the interchange of information and programmes with the object of promoting a greater degree of Commonwealth consciousness and understanding between the member countries; and stressed the importance of true and impartial news reporting based on the unrestricted flow of information, and of the responsible interpretation of events, as means to this end. Among other matters discussed were the contribution of broadcasting to social and educational development, the priorities and techniques of audience research, the disposal of resources for more effective programme planning in the interests of both majority and minority cultural and linguistic audiences, and the place of commercial advertising within a public service broadcasting system. The Conference members agreed to impress upon their national representatives the desirability of supporting strongly any moves to relax copyright laws in favour of developing countries. Papers concerned with the design of radio and television studio and transmitter plant, propagation and frequency problems, technical aspects of programme interchange and experience of the performance of various types of equipment, were considered; and, to sustain and exchange the interchange of technical information, a number of proposals were made to utilize the services of the Conference Secretariat, which has now been permanently established. The Seventh Conference will meet in New Zealand in February 1968.

Secretariat address: Broadcasting House, London W.1., England.

ASOCIACION INTERAMERICANA DE RADIODIFFUSION (AIR)

President: Sr. Lic. Félix Cardona Moreno, Apartado 3953, Caracas, Venezuela.

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 5000 broadcasting and 400 television stations.

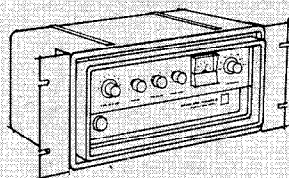

Brackets on, it's a terminal relay STL Brackets off, it's portable.

Put the transmitter and matched receiver on a mountain top — unattended. Give it only 60 watts total power. It becomes one hop of an intercity multi-hop relay link.

So it's a terminal relay — an all solid state terminal relay without klystron, meeting CCIR and FCC video and audio program requirements for color and black and white TV. In the studio, it works with 110 or 220 VAC. It accepts 405, 525, 625 and 819 lines. As an option a low noise RF preamp gives extended range systems performance.

But it's more. In the field, it becomes a high power, portable, lightweight TV pickup relay. It works with 12 or 24 VDC. It can run on a car battery. It has been flown in helicopters, been bounced in golf carts, newswagons, yachts and jeeps. Very wide band video circuitry assures stable top performance in widely varied environments.

Major TV networks and independents in the United States, Europe, and Latin America, as well as the U.S. military, have evaluated it, tested it, and bought it. Write for details.

Model	Band (Mc)	Nominal RF Power	Nominal RCVR Noise Figure		Allocation
			without Preamp db	with Preamp db	
MA-2A	1990-2110	2 watts	10	5	TV auxiliary broadcast, STL, remote TV pickup

EUROVISION IN 1965

*By J. Treeby Dickinson,
Chief Engineer, Technical
Centre of the E.B.U.*

Although 1965 may have lacked such large-scale operations in Eurovision as the transmission of the Olympic Games, it has, nevertheless, been a year of steady development, both in the extension of the network by the establishment of permanent links with Ireland, Morocco and Portugal, and in the steady growth of its various activities.

Papal visit to the United Nations

A most noteworthy occasion was certainly the Eurovision coverage of the visit of Pope Paul VI to New York on 4th October, 1965. The first phase was the recording of the Pope's departure from Rome at 0530 CET, transmitted through the Italian Earth-station at Fucino and the satellite Early Bird to the United States and distributed in Europe at 1000 CET. Then, from 1415-1830 CET, the pictures of the arrival at New York and procession were transmitted live to Europe by way of the satellite Early Bird and the Raisting Earth-station in Germany, and were distributed to thirteen E.B.U. Members. Next, from 2005-2215 CET, came the journey to the United Nations, the Pope's address to the General Assembly and meeting with the Heads of Delegations, also live by satellite and distributed to twenty E.B.U. Members. In addition, the Mass in the Yankee Stadium was televised and the tape recordings flown to Rome and distributed over the Eurovision Network from there on the following day. Inevitably the technical arrangements for this complex operation were made at short notice. For the arrival and procession the pictures distributed over the United States Networks were relayed to Europe, but the events in the United Nations were covered by a RAI production unit using the permanent equipment of the United Nations Broadcasting Service, this same RAI unit covering also the Mass in the Yankee Stadium, using material placed at its disposal by one of the American Networks. In addition, the RAI undertook, on behalf of the E.B.U., the technical co-ordination and presentation on the spot of all the coverage intended for Europe.

The Satellite Early Bird

Perhaps the most significant single development in the field of Eurovision during 1965 was the taking-into-service over the North Atlantic of the so-called "stationary" telecommunication satellite HS-303, more widely known as "Early Bird". The possibility of live television transmissions across the Atlantic is, of course, no longer a novelty, thanks to the experimental satellites Telstar and Relay, but they could be used only during the periods of mutual visibility which varied in duration from zero up to about ninety minutes, depending upon the inclination of their orbits relative to the Earth. The particular feature of the satellite Early Bird is that, being in a synchronous orbit, it is continuously visible from the Earth-stations on both sides of the Atlantic and is thus, in theory, available for use at all times.

It should be borne in mind, of course, that this satellite was principally intended to augment the telephone service between Europe and North America, but nevertheless its equipment enables it to be used to provide one television channel in each direction. At the time of writing, the conditions under which the satellite may be used for television are still under discussion, but by virtue of temporary arrangements between the various interested bodies, it has been used for such purposes on numerous occasions. The first of these was on 2nd May, 1965, when a two-way multiple-origin programme was transmitted to mark the introduction of this new telecommunication facility. This programme was rather similar in conception to the very first trans-Atlantic television programme with which the satellite Telstar was inaugurated in 1962, the principal differences being due to the exploitation of the possibility of simultaneous transmission in both directions, which permitted the rapid switching between pictures originating on either side of the Atlantic and also, by using the "split-screen" technique, the simultaneous display of pictures from North America and from Europe. On the following seven Mondays and on certain other days too during the satellite's test period, its facilities were placed at the disposal of television organisations.

Although the transmission of programmes such as the multiple-origin inaugural programme may be one of the more spectacular uses of synchronous satellites, their real value, from the point of view of the television viewer, is more likely to lie in transmitting up-to-the-minute news pictures across the Atlantic. In fact, the inaugural programme itself contained a short news-exchange sequence, and this was followed on the next day by two sequences of news items transmitted from America to Europe. On the last two Mondays in May and the first Monday in June, experimental trans-Atlantic news exchanges were arranged in conjunction with the Eurovision news exchanges, taking place at about 1700 CET on each of the days. In addition to these news exchanges, the satellite was utilised on numerous occasions during May and June for short-notice transmissions of single items of particular topical interest. Since the end of June, however, the utilisation of the satellite for television transmissions has been very restricted, pending the outcome of the negotiations on the financial and other conditions relating to its use, and the extent to which such satellites will be used in the future will depend very much upon these conditions.

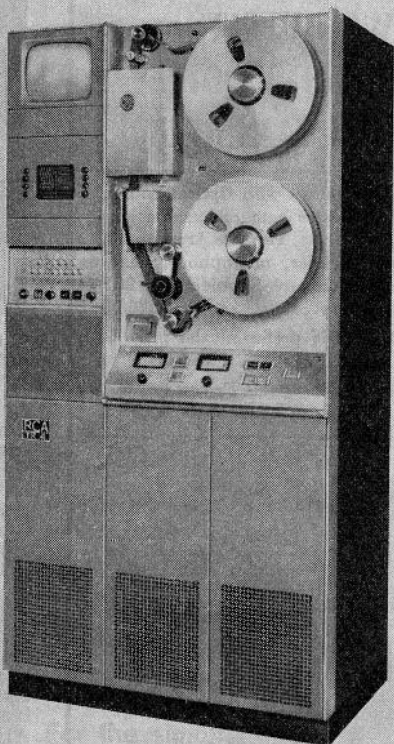

Extension of the Eurovision Network

In addition to the possibilities offered by the Early Bird satellite of extending the Eurovision Network across the Atlantic, 1965 has also seen its extension, on a permanent basis, to the two remaining "unconnected" countries in Western Europe, namely Ireland and Portugal. On 23rd June, 1965, a permanent two-way vision link was taken into service between Mohercrom, a radio-relay station on the national network of Telefís Éireann, and the B.B.C. transmitting station at Divis in Northern Ireland. Circuits already existing enable the new international junction to be extended to Dublin and to Belfast, the connection to the rest of the Eurovision Network being made through the United Kingdom. The availability of this permanent link enables Telefís Éireann to participate as a full member of Eurovision, its previous participation having been

Compact TV Tape Recorder

**This budget-priced, quadruplex Recorder
accepts high band, color, and electronic splicing accessories**

This total performance compact does just about everything the deluxe model does. Complete in a 33 by 22 by 66 inch cabinet, the transistorized TR-4 is the answer for installations where low initial cost and broadcast quality pictures are indicated. A complete recording and playback package, it has suitable monitoring facilities, built-in picture and waveform monitors, and other provisions to meter key circuits for proper setup.

Like other RCA transistorized TV tape equipment, new circuit techniques, needed for high band, are accommodated by the TR-4. With such circuits, (available as optional extras) high band can be selected as a second mode of operation, with all its

benefits, including color and monochrome tapes of particularly high quality, and multiple generation video dubs.

Features now standard on the TR-4, as on all RCA TV tape equipment, include air-lubricated tape guides, magnetic tone wheel, solid state control system, built-in switchlock and two-speed operation. Accessories available include Pixlock, automatic timing control, cue record and playback and electronic splicing. The TR-4 is the only recorder of its kind that's adaptable to color operation. And standardized modules in this and other RCA TV Tape Recorders assure high quality, easy maintenance, and simplicity in adding accessories.

"Live" pictures of the proceedings of the United Nations Security Council transmitted to Europe by means of the telecommunication satellite Early Bird.

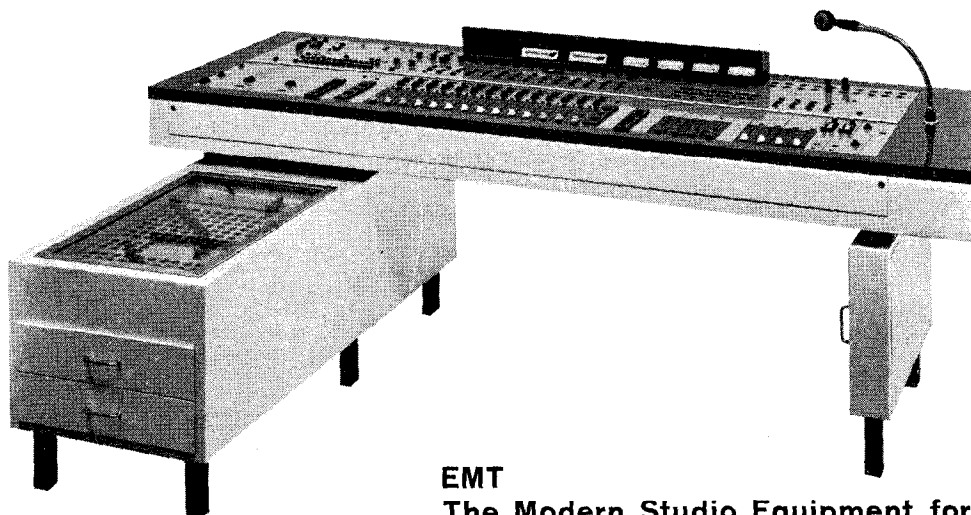

limited to the occasional reception and rebroadcasting of Eurovision programmes broadcast in the United Kingdom and the contribution of a few items by way of a temporary link specially set up between Mohercrom and Divis on each occasion.

A further extension of the network was accomplished on 3rd July, 1965, when a single reversible link was taken into service between Lujar, near Granada, in Spain, and Cap Spartel, near Tangier, thereby providing the physical facilities necessary for the Radiodiffusion-Télévision Marocaine to become a member of Eurovision. This circuit is the second vision junction to be established between Europe and the African continent, the first, a tropospheric-scatter link between France and Algeria, having been set up originally by the Radiodiffusion-Télévision Française in 1960. This latter circuit has recently been taken into use again, but it cannot now be described as constituting a part of the Eurovision Network as such, since the Radiodiffusion-Télévision Algérienne is not a Member of the E.B.U.

Until recently, the position of Portugal was very similar to that of Ireland. The Radiotelevisão Portuguesa could receive and rebroadcast Eurovision programmes transmitted from the Spanish television stations, and on one occasion, in May, 1963, a temporary link was specially set up between Lisbon and Guadalcanal in Spain, to provide for the transmission of a programme originating in Lisbon. However, towards the end of 1965, a permanent international junction was taken into service between Mendro in Portugal and Guadalcanal. Moreover, the Televisión Española has recently duplicated the reversible vision circuits between Guadalcanal, Madrid and Barcelona, which will make it possible, outside the periods when the Spanish Second Television Programme is being broadcast, to transit across Spain programmes in which the T.V.E. does not participate.

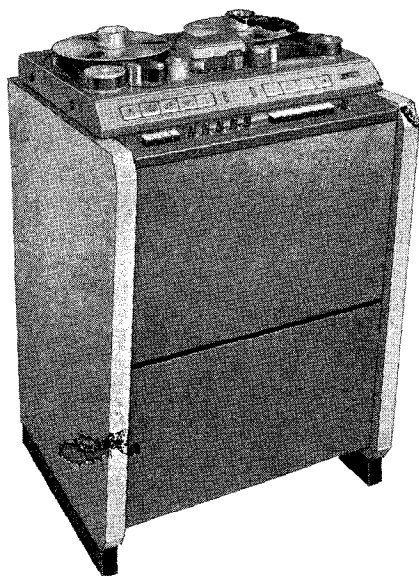

The permanently leased network of programme-sound and communication circuits, which constitutes Stage 1 of the Eurovision Permanent Network Scheme, has continued to prove itself of great value. This network was extended at the beginning of 1965 by the provision of communication circuits between Stockholm and København, which point

EMT

**The Modern Studio Equipment for
Broadcasting and Recording Studios**

STUDER J 37-4-1 FOUR-TRACK ONE INCH MASTER TAPE RECORDER

For the simultaneous recording on 1" wide tape of four signals of full track width. Recording may be made on any of the four tracks in any combination while at the same time playing back from any of the previously recorded tracks. A built-in four-channel "guide track" amplifier permits monitoring of the record head output for overdubbing purposes.

EMT is world famous for its program of specialized professional equipment for broadcasting and recording. EMT delivers professional tape recorders, turntables, reverberation generating units, and test equipment.

RADIO BROADCAST RECEPTION CONDITIONS EXPECTED DURING 1966

By George Jacobs, Chief, Frequency Division, Voice of America, Washington, D. C. 20547

Broadcasting stations are assigned specified bands for operation, as follows:

LONG WAVE (Low Frequency)		MEDIUM WAVE (Medium Frequency)	
Kilocycles	Meters	Kilocycles	Meters
150-285	1053-2000	525-1605	187-571

SHORT WAVE Tropical Broadcasting Bands		
Kcs.	Megacycle Band	Meter Band
2300-2495	2	120
3200-3400	3	90
4750-5060	4	60

HIGH FREQUENCY BROADCASTING BANDS		
Kcs.	Megacycle Band	Meter Band
3900- 4000	3.9	75
5950- 6200	6	49
7100- 7300	7	41
9500- 9775	9	31
11700-11975	11	25
15100-15450	15	19
17700-17900	17	16
21450-21750	21	13
25600-26100	25	11

Some broadcasting stations operate outside of the assigned bands, mainly near the edges of these bands.

The Long Wave Band (used in Europe) and the Medium Wave Band (used worldwide) are used mainly for domestic broadcasting, but are used also for some international broadcasting to adjacent countries. Although long and m.w. stations are normally heard only for moderate distances, long-distance reception is possible over dark transmission paths, mainly during the fall, winter and spring months in the reception area.

The Tropical Broadcasting Bands are assigned for use for domestic broadcasting in tropical areas, where high atmospheric noise levels limit the service area of medium wave stations. DX reception on these bands is best when the transmission path between the transmitter and receiver is all or mostly in darkness. These bands are used mainly by stations in Latin America, Africa, South and South-east Asia, and Oceania.

The High Frequency Broadcasting Bands, between 3.9 and 26.1 megacycles, are used for both international and domestic broadcasting. These bands are allocated for worldwide use, except that the 3.9 and 7 mc. bands are not allocated for broadcasting in the American area. Also, the 3.90 to 3.95 mc. portion of the 75 meter bands is used only in Asia and Oceania.

Reception conditions on these bands vary according to the time of day and season of the year. Most of the international broadcasting stations make seasonal changes in frequency usage, mainly on the first Sunday of March, May, September and November. In addition, frequency and time changes

are made at other times during the year, due to interference, change of program times, addition of new transmitters etc. A large percentage of the domestic broadcasting stations operating in the high frequency bands do not make seasonal frequency changes, but some, particularly the stations in India, Pakistan, USSR and South Africa do make seasonal shifts.

Short-wave, and long-distance medium-wave and long-wave broadcast reception is possible only because of the existence of an electrified region high in the earth's upper atmosphere. This region, electrified by nature, is called the **ionosphere**. It is the ionosphere, acting somewhat like a mirror, that reflects radio signals over great distances.

The ionosphere is believed to be caused, at least in part, by ultraviolet radiation given off by the sun. The amount of radiation illuminating the ionosphere varies hourly, seasonally and geographically, depending upon the relationship between the sun and the earth. In addition, year-to-year changes, over an approximate 11-year cycle, occur in the ionosphere's capability to reflect radio waves. For reasons not yet fully understood by scientists, these changes appear to result from the difference in the number of sunspots appearing on the face of the sun. When the sun's surface is covered with a great number of spots, the ionosphere is electrically strong and long-distance radio reception is often at its best; when the number of sunspots diminish, reception becomes poorer. During 1957-61, when the sunspot cycle was at or near its maximum, reception conditions were at their best. During the past three years, there have been few sunspots on the face of the sun, and reception conditions have been considerably poorer.

It now appears certain that a new sunspot cycle has begun, and the number of sunspots on the surface of the sun are on the increase again! According to solar observations made with powerful telescopes at the Zurich Solar Observatory, the previous cycle, which began during April, 1954, appears to have ended during November, 1964 with a sunspot count of 10. Since then, sunspots have been increasing, but very slowly. It is estimated that 1965 began with a sunspot count of 12, and by the end of the year it had risen to approximately 25. While the sunspot count is still low, the important thing is that it is on the increase. Sunspot activity during 1966 is forecast to range between approximately 25 and at least 50. This should result in a noticeable improvement in short-wave reception conditions, especially in the 11, 13, 16, 19 and 25 meter bands.

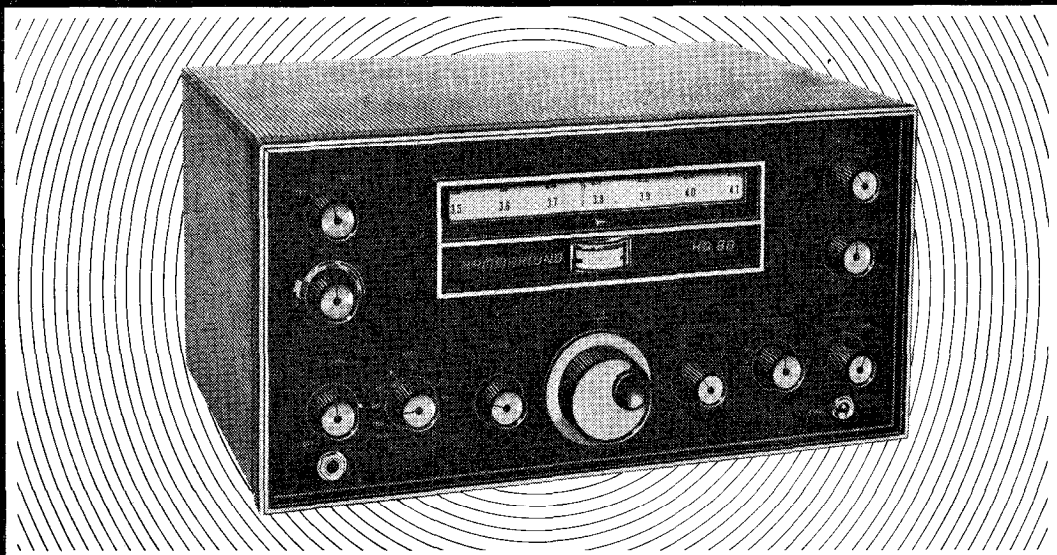

The following is a general summary of reception conditions expected on each short-wave broadcasting band during 1966.

25 mc. band (11 meters)

As the sunspot cycle rises, more and more use will be made of this band for long-distance broadcasting. During 1966, a few stations are expected to use the 11-meter band, and it should be possible to receive them over distances of many thousands of miles for short periods of time during the daylight hours. Reception is likely to be best in this band during the late fall, winter and early spring months, with signals stronger on north-

HAMMARLUND

WORLD LEADER IN COMMUNICATIONS EQUIPMENT presents

HI-STABILITY AMATEUR BAND RECEIVER! Model HQ-88

a NEW CONCEPT in high stability reception!

The Hammarlund HQ-88 offers all of the controls and provisions for smooth, interrelated operation with your present equipment. **Frequency Ranges:** 1.8 to 2.4 mc., 3.5 to 4.1 mc., 6.9 to 7.5 mc., 20.9 to 21.5 mc., [27.9 to 28.5 mc.]*, 28.5 to 29.1 mc., [29.1 to 29.6 mc.]*, [WWV (5 mc.)]* and 3 extra crystal positions for optional ranges upon special request. (from 3.5 mc. to 30 mc.) **Calibration:** Dial markings every 10 kc, with logging scale approx. 1 div/kc **Number of Conversions:** Dual on 10 through 80 meters, single on 160 meters **Noise Limiters:** Series types for AM, IF type, adjustable for SSB and CW. **Rejection:** 1st IF rejection better than 60 db Image rejection 60 db on 160 through 15 meters, 45 db on 10 meters.

* Optional Ranges.

Stability is truly extraordinary in this remarkable receiver, approximately 100 cps from warmup, less than 50 thereafter. It will hold frequency under the most adverse conditions — pound it with your fist — drop it — there will be no change in performance. Specifications for the HQ-88 tell a unique story. The unit covers all popular ham bands, 10 through 160 meters. Highly selective (2.2 KC and 5 KC) circuits, with skirt ratios of better than 3 to 1, and separate AM and SSB detectors make the HQ-88 ideal for SSB, AM, CW, and RTTY. Sensitivity is a realistic 0.75 microvolt for a 10 db. AM signal-to-noise ratio and 0.40 microvolt for SSB and CW. Thermal drift is rated at no more than fifty cycles after a short warmup.

Radio Broadcast Reception Conditions

(Continued from page 34)

south paths than on those from the east and west. Reception is also expected to be considerably better in southern and tropical regions than in more northerly areas.

21 mc. band (13 meters)

Considerably more broadcasting stations are expected to be heard in this band during 1966 than during the previous two or three years. Reception of exceptionally strong signals over distances of many thousands of miles, from almost all areas of the world should be possible during the daylight hours of the fall, winter and spring months. Some long-distance reception, especially from stations in southern and tropical regions is also expected during the daylight and early evening hours of the summer months.

17 mc. band (16 meters)

Excellent long-distance reception of stations from all areas of the world should be possible in this band during the daylight hours throughout the entire year. During the late spring and summer months, strong signals should also be heard during the early evening hours as well.

15 mc. band (19 meters)

Propagation conditions in this band are expected to be excellent for the reception of both long-distance stations many thousands of miles away and stations from medium distances of a thousand miles, or so. The band is expected to be full of stations with exceptionally strong signals from shortly after sunrise, through the daylight hours and into the early evening. During the summer months, excellent reception may often be possible during the nighttime hours as well. Exceptionally longdistance reception is more likely to occur for a short period after sunrise, and again during the late afternoon and early evening hours. Medium-distance reception should be best during the late morning and afternoon hours.

11 mc. band (25 meters)

This is expected to be an excellent band for medium-distance reception during the hours of day-

light. During this period, at any season of the year, exceptionally strong signals should be received from station that are between approximately 750 and 2200 miles away (1250 and 3750 km.). Long-distance reception, from stations several thousand miles away, should be possible for a short period after sunrise, and again during the late afternoon and early evening hours. During the summer months, long-distance reception also should be possible during the hours of darkness.

9 mc. band (31 meters)

This band is expected to be excellent for daytime reception over short-to-medium distances on the order of 500 to 1500 miles (850 to 2500 km.). Fairly good long-distance reception, over many thousands of miles, should be possible throughout the year during the early evening hours, through the hours of darkness and until shortly after sunrise.

7 and 6 mc. bands (41 and 49 meters)

Excellent short-range reception is expected on these bands during the daylight hours for distances up to approximately 1000 miles (1750 km.). During the fall, winter and early spring months, when local atmospheric noise levels are at their lowest values, fairly good medium and long-distance reception should be possible from shortly before sunset, through the hours of darkness and until shortly after sunrise. High static levels are expected to make long-distance reception somewhat difficult during the late spring and summer months.

4, 3, and 2 mc. bands (60, 90, and 120 meters)

These bands are mainly used for short-distance reception. During the hours of daylight, stations within a radius of a few hundred miles should be heard well. After sunset, and throughout the hours of darkness, the reception range increases, and during the late fall, winter and early spring months, good reception also should be possible of medium-distant stations within a radius of one or two thousand miles. During the summer months, high static levels are likely to limit reception in these bands to short-distances.

For more specific reception information, please refer to the Table of The Most Suitable Meter Bands for 1966 (page 76).

A MESSAGE FROM THE EDITOR

This is the twentieth edition of the World Radio Television Handbook in which we have attached importance to giving as complete and practical information as possible to short wave listeners in order to make it easier and quicker for them to pick up the broadcasts of the various countries and to identify the stations.

We have three wishes to advance: the one is to help us by making WRTH as well-known as possible in all circles interested in radio and television in general and in *short wave listening in particular*; the other is to receive your criti-

cism and wishes in regard to the contents of the 1966 edition.

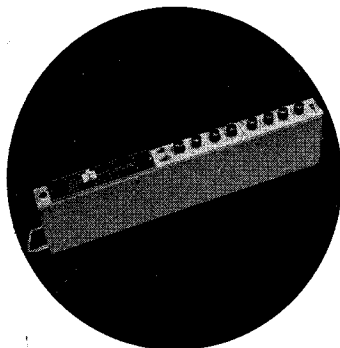

To radio and television stations we direct an earnest appeal to send us *regularly* all corrections and particulars of extensions, which will then be passed on for the benefit of listeners all over the world.

Thanks are due to all those who have assisted in various ways in the preparation of this anniversary edition - to all broadcasting and television organisations irrespective of politics, race or religion - to radio clubs and contributors in many countries all over the world, and to our many faithful advertisers.

INTERVISION IN 1965

By Aleš Suchý, Head of the Intervision Programme Coordination Centre.

The expansion of the membership of Intervision has continued also in 1965 when television organizations of the Republic of Finland, the Byelorussian SSR, and the Latvian SSR joined this organization, the total number of its members thus attaining thirteen (the Czechoslovak Socialist Republic, the German Democratic Republic, the Polish People's Republic, the Hungarian People's Republic, the Rumanian Socialist Republic, the People's Republic of Bulgaria, the USSR, the Estonian SSR, the Ukrainian SSR, the Lithuanian SSR and the three above mentioned organizations).

This expansion will undoubtedly affect the total number of broadcasts exchanged among the individual member organizations and, on the other hand, it increases the responsibility of technical services, as the extent of the Intervision network has achieved an unprecedented size.

The fact that already today Intervision members exchange mutually a remarkable number of various television broadcasts is witnessed, for instance, by the statistical review of the period between May 17th - August 15th, 1965. Within this period of time 182 broadcasts were relayed, of which 60 sports

relays, 40 topical-political broadcasts, 30 reportages, 23 concerts, operas and ballets, 16 shows, 11 broadcasts for children and youth and 2 cultural programmes.

The development of the Intervision network is testified to also by the appearance of new towns from where the Intervision programmes are relayed such as Riga, Gorki, Kazanj, Lvov, etc. In this connection it is necessary to mention the Soviet television satellite with whose effective help Intervision viewers can follow programmes from as far as the Pacific coast, the harbour of Vladivostok and other Far Eastern towns.

In comparing the statistical reviews for the last years our attention is immediately drawn to the ever increasing number of topical-political programmes. From the point of view of technical organization this tendency has been reflected in the fact that Intervision started a regular exchange of TV topical items four times a week (Tuesday, Wednesday, Thursday, and Friday), very important items being possible to be relayed also on other days than mentioned.

Cooperation in this field is being extended also with Eurovision and mutual exchange of topical TV items has been already started.

However, the cooperation with Eurovision does not cover only this field of television work, but concerns a whole range of sports broadcasts, shows, cultural broadcasts, and reportages, as shown in the below-published table concerning the mutual exchange of broadcasts between Intervision and Eurovision in the time from April 1st - June 30th, 1965.

Numbers of Eurovision broadcasts relayed over the Intervision network:

	BBC	DR	ITV	JRT	ORF	RAI	RTB	SRT	SSR	TVE	YLE	ABS Satel.	Total
Number	1	1	1	12	2	2	1	2	1	1	2	10	36
Duration	110	46	106	882	227	187	57	222	25	42	75	458	2437
Cultural	-	1	-	-	-	-	-	-	-	-	-	-	1
Topical	-	-	-	1	-	-	-	-	-	-	-	10	11
Sports	1	-	1	6	2	1	1	2	-	1	2	-	17
Entertaining	-	-	-	5	-	1	-	-	1	-	-	-	7

Number of Intervision broadcasts received by the individual Eurovision participants:

Receiving org.	ARD	BBC	BRT	DR	JRT	NRK	NTS	ORF	ORTF	RAI	RE	RTB	SRG	SRT	SSR	TSI	TVE	YLE	ZDF	ABC	NBC	CBS
Number of transmissions	19	10	19	20	25	14	13	15	14	18	2	16	20	20	5	4	2	20	21	7	3	3

Intervision has recently intensified its work in the field of various international festivals organized in its member countries such as the Prague television festival, the E.E.Kisch International TV competition held in Leipzig, the festival of popular songs of Baltic countries relayed from Rostock in the German Democratic Republic, the international song festival held in Sopoty in the Polish People's Republic, the festival of historical plays at the castle of Sziklos in the Hungarian People's Republic, the "Golden Clef" song festival in Prague, etc. The new festival of television films on the work and life of fishermen, organized in Riga will undoubtedly soon attract the attention of the public.

Great attention is at present devoted to long-term planning of the individual broadcasts. Viewers rightly request high quality programmes both in the field of art and sports. Therefore we meet so often the names of world-known artists and ensembles who have acquired an international reputation on the screens of TV viewers. The artists consider it a special honour to appear in the Intervision network.

In the field of sports programmes all top competitions are relayed. It must be, however, said that their number could be further increased if it were not for sometimes exaggerated financial requirements of some international sports federations which in this way render impossible the relays of some events, awaited with extraordinary interest by widest masses of people.

I think that it can be said in general that the five-year existence of Intervision has fully proved the necessity of establishment of this international organization which is, as testified by the daily life, needed by national television organizations, using it as their effective assistant in the mutual programme exchange.

SUMMER SUPPLEMENT 1966

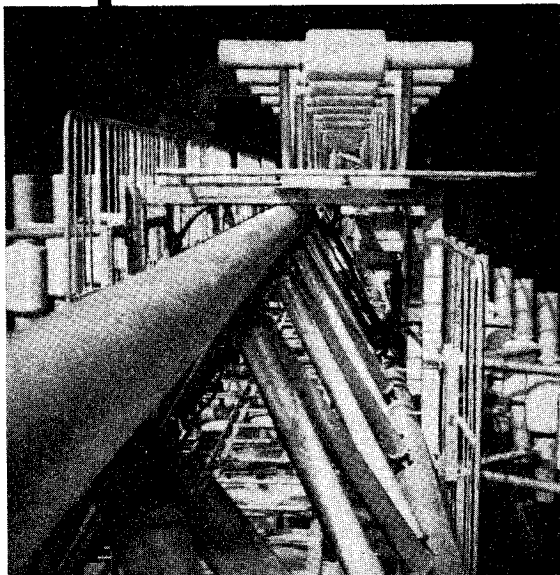

With this up-to-date guide, you can have as much pleasure monitoring shortwave during the summer as you do the other seasons of the year. Many broadcasting stations revise their schedules for that period. The 1966 Summer Supplement - issued in June 1966 - will contain hundreds of changes in time schedules and programming and will bring your World Radio Television Handbook 66 right up to the minute including the summer schedules of the major broadcasting and short-wave stations. So there is no need to give up your hobby during that time. You can still monitor the many important stations around the world which are usually received with good volume at certain times of the day throughout the summer and autumn season.

There are approximately 80 pages of program details on thousands of stations and in addition you receive a complete up-to-date table of shortwave stations in the world. To make sure of getting your copy, we suggest that you send us your order as early as possible. Price: US \$ 1.80, £ 0/12/0, DM 7.20, D.Kr. 12.25 per copy, plus postage \$ 0.25, £ 0/1/9, D.Kr. 1.50 per copy.

★ Spain - Broadcasttransmitter

Why station owners - all over the world - choose their equipment from the PHILIPS range

They do so for some very good reasons:

- Philips' reputation for reliability and after-sales service, maintained since the earliest days of radio (our first broadcast went on the air in 1923, our TV experiments date back to 1935).
- Philips engineers survey, plan and install the entire system, whether it consists of a simple audio amplifier or a complete TV network. And whether the site is on the equator - e.g. Quito, Ecuador - or within the polar circle - like the FM and TV station at Kiruna in Sweden.
- Philips equipment covers the complete range from microphone to broadcast transmitter, from TV camera to aerial, from line amplifier to radio link.

N.V. PHILIPS' TELECOMMUNICATIE INDUSTRIE, HILVERSUM, THE NETHERLANDS

COLOUR-TELEVISION STANDARDS FOR EUROPE

by Georges Hansen

Director of the Technical Centre of the European Broadcasting Union

Vice-Chairman of C. C. I. R. Study Group XI (Television).

At the end of 1964, in my article for the 1965 World Radio and Television Handbook, I expressed the hope that it would be possible to agree on a common colour-television system for all the countries of Europe at the time of the C.C.I.R. Study Group XI meeting in Vienna. I also wrote that it would probably be the last opportunity to reach a European agreement, as some countries such as the United Kingdom and the Federal Republic of

Germany intended to start a regular colour-television service in 1967 and had therefore to take a decision on the system during 1965. Now the C.C.I.R. Study Group XI meeting has taken place, in Vienna, from 24th March to 7th April, 1965 and no agreement was reached. Indeed, the division was greater than ever and the proponents of the SECAM, PAL and NTSC systems held to their positions. The element of surprise (which came in fact just before the meeting opened) was the Franco-Russian agreement on SECAM. All the "O.I.R.T countries" expressed their preference for a system "based on SECAM".

Does this mean that one should abandon all hope of having a common colour-television system for all the countries of Europe? Not entirely. Some countries still wish to start a regular colour-television service in 1967 and will have to take at least a provisional decision on the standards by the end of 1965 or very early in 1966 at the latest. But they might try to invest mostly in equipment which is independent of the choice of the system and might be willing to change their decision about the system if a common agreement can be reached at the time of the Plenary meeting of the C.C.I.R. in Oslo from 22nd June to 22nd July, 1966. But let us face the facts: the possibility of an agreement is very slight—there is only a faint ray of hope.

And yet it would be a great misfortune for Europe—and a long-lasting one—if two or possibly three systems were adopted; a few experts, amongst whom I was, expressed their concern at the Vienna meeting of C.C.I.R. Study Group XI about the difficulties which would arise for the exchange of programmes both by tape and by radio-links, and also for the receivers in the border regions between countries having adopted different systems.

What is the situation now and what is being done? For the non-specialist, let us recall that the NTSC, SECAM and PAL systems have much in common and that the significant difference between them lies essentially in the methods of modulating the colour sub-carrier for the transmission of the chrominance information. In the NTSC system quadrature modulation with suppressed carrier is used. In the SECAM system, the colour-difference signals are transmitted successively, line by line, by frequency modulating the sub-carrier. The PAL system is analogous to the NTSC except that there is a periodical alternation, from one line to the

next, of the phase of one of the modulation components. A complete description of the systems, their detailed specifications and their relative advantages and disadvantages are given in the Report of the E.B.U. Ad-hoc Group on Colour Television, 2nd Edition, February, 1965*. The results of the discussions of C.C.I.R. Study Group XI appear in documents N° XI/116 and XI/117 of the Vienna meeting.

The E.B.U. Ad-hoc Group on Colour Television which is composed, let us recall, of specialists from Western Europe belonging to Broadcasting Organisations, Telecommunication Administrations and radio manufacturers, is carrying on its work notably by studying the consequences of the possible adoption of more than one system in Europe: effects of single and consecutive transcodings, practical difficulties in the exchange of programmes over radio-links or by tape recordings, complexity and cost of receivers in the border regions, etc. The Group has succeeded in defining precisely the specifications of the PAL system to be considered, as well as those of the decoding system to be used. In France, work undertaken by the Compagnie Française de Télévision (C.F.T.) and by the O.R.T.F. has led to improvements of the SECAM system obtained by the optimisation of parameters. A new variant, known as SECAM III A, is claimed to give better results as far as noise immunity and chroma transient response are concerned.

Work is going on also, no doubt, in the Eastern European countries. A new colour-television has been tested in the U.S.S.R.; as far as we know, the chrominance vector with phase α is transmitted during one line and the same vector with phase 0 during the succeeding line (quadrature modulation with suppressed carrier being used). A delayline is used at the receiver which is claimed to be very simple.

This, then, is the situation at the time of writing this article. Perhaps one should remember at this juncture the famous saying of William of Orange: "Il n'est pas nécessaire d'espérer pour entreprendre, ni de réussir pour persévérer".

* A limited number of copies, in French and in English, are still available.

INTERNATIONAL SHORT WAVE LEAGUE.

Join the ISWL and enjoy the following free services: QSL Bureau, Translations (40 languages), Station Identification (broadcast and utility stations), DX Certificates, Contests, Correspondance Bureau, etc. Monthly magazine, MONITOR, contains short-wave station news from official sources and 1,700 ISWL members in 80 countries, also contains sections for amateur SWLs, transmitting amateurs, VHF listeners, QSL card collectors, etc.; general articles about short-wave stations, reporting and identifying stations in many languages, members experiences, etc. etc. Annual membership fee £ 1/15/0, US\$ 5.00. RADIO AND TELEVISION IN THE SERVICE OF INFORMATION AND EDUCATION IN DEVELOPING COUNTRIES

by Dr. Henry R. Cassirer, Chief, Educational Use of Mass Media, Department of Mass Communication, UNESCO.

The past 20 years have brought about many fundamental changes in the nature and importance of broadcasting in the modern world, not the least significant of which is its growing application to meet the urgent civic, social and educational needs of developing countries. The emergence of these countries to independence, their need to promote national unity, social transformation and the education of their people, are leading them

to see Radio and Television broadcasting in an entirely new light: as essential forces in the political, social, cultural and educational revolution they are undergoing.

Radio broadcasting is the primary tool of mass communication in developing areas. It crosses deserts and swamps, mountains and forests. It is the cheapest in production and can be of relatively low cost in reception. Thanks to the transistor, it may be heard in areas without electricity, nor does it require roads or other means of transport to reach its audience. It appeals to the literate and illiterate with equal force. It is flexible in content and fast in transmission.

Yet it has serious limitations compared to other media of communication. It lacks the permanency and explicitness of the printed word. It appeals only to the sense of hearing. It cannot match the impact of the static photograph or wall poster, or of the moving film and television. It is thus limited in lasting impact and as a tool of systematic instruction.

Television may at first seem characterized more by its obstacles to the introduction in developing countries than by its opportunities to serve them. It is high in cost of installation, production and reception. Its programmes require elaborate resources of visual presentation and professional talent. Its range of transmission is limited. Reception requires supply of electricity. Maintenance of equipment for production and reception calls for relatively high technical skills.

Nevertheless, television is penetrating all corners of the world at a surprising speed. In Africa, it has now been introduced in some twenty countries, hardly any of the Latin American countries are without their television stations, and it is making also rapid progress in the countries of Asia. Frequently, TV reception is limited to urban areas, and the bulk of the population is not yet reached by it. But here, too, important changes are occurring, receivers are being designed for non-electrified areas, and community reception, or teleclubs, give access to the poorer masses who could never afford a home set. TV has proved so powerful in impact, so effective for the communication of information and education, so commercially attractive, so significant for national prestige,

that its march around the globe exceed all predictions.

If Radio appears to be most suitable for mass communication to all sections of the population, television may turn out to be the most effective medium of communication for intensive appeal to more restricted audiences.

Yet the actual spread of broadcasting in developing countries is far behind their needs and potential. That is why UNESCO is assisting its Member States in the planned development of broadcasting facilities, and in the training of personnel. UNESCO is also keenly interested to promote the production and dissemination of lowcost radio receivers. The task is to assure their large-scale production and marketing, a matter which UNESCO is exploring in cooperation with the Regional Economic Commissions of the United Nations, and with individual Member States and their manufacturers.

The first need is for countries to have a conscious, planned policy in the field of broadcasting which links this tool of mass communication to the broader objectives of economic and educational planning. Only such consideration of the overall significance of broadcasting, a consideration which will affect the administrative structure of broadcasting, the nature and extent of technical installations, as well as programme policy, can assure that Radio and Television serve the best interests of the country. Advisory missions of this type therefore constitute one of the contributions of Unesco to the purposeful development of broadcasting.

Training is a further bottleneck to which UNESCO pays particular attention. Such training may be undertaken through ad-hoc training courses, staffed by national and foreign experts and organized at individual broadcasting stations, through permanent training institutions of a national or regional character, such as UNESCO is currently envisaging to set up in cooperation with the Government of Nigeria, and through fellowship programmes for training in other countries. A combination of all these methods will normally lead to best results. We may identify three distinct areas of training: general professional training of programme and technical personnel which qualifies them for all-round work in broadcasting organizations; specialized training in broadcast journalism and educational programming which prepares programme staff for the specific tasks outlined in this article; and training in utilization.

To familiarize educators and dynamic citizens with the most effective methods of utilizing such programmes, has become a vital necessity for every developing nation. Such training must be inspired by awareness of the particular functions which Radio and Television may fulfil in the fields of information and education.

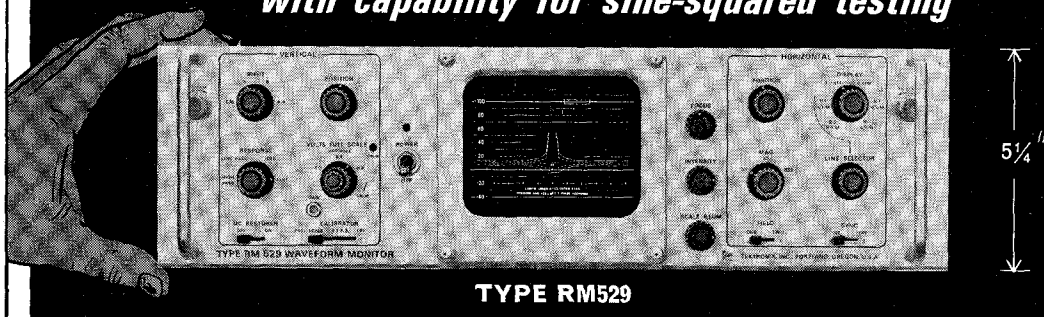

In the field of information, news broadcasting comes first. News of national, local and world events links continuously the individual and the society of which he is a part. The leaders of government, of science and of culture find broadcasting particularly effective as a channel of communication with the mass of the people. Here television proves even more effective than Radio, for no image is more "visual" than the outstanding human per-

Continued page 46

v.i.t. displays with video-waveform monitor

with capability for sine-squared testing

frequency responses — Four response characteristics necessary to monitor Video Test Signals are provided:

1. FLAT to 5 MHz $\pm 1\%$, to 8 MHz $\pm 3\%$. This flat response position to 8 MHz assures waveform fidelity and makes the video-waveform monitor ideally suited for sine-squared testing.
2. HIGH PASS 3.58 MHz center frequency, 30% down at ± 400 kHz.
3. LOW PASS -18 dB at 500 kHz.
4. IEEE 1958 STD 23-S-1. Color subcarrier -20 dB.

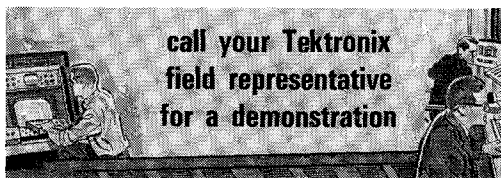

YRGB or RGB display capability — For monitoring output of color processing amplifiers.

line selector — Provides stable displays of the Vertical Interval Test signals. Adequate brightness is provided even at the fastest sweep speed. Can display any line desired. Brightening pulse automatically intensifies the displayed line as viewed on the associated picture monitor. No modification to the picture monitor is required.

field selection — Positive acting circuit allows selection of field one or two for display. Noise will not cause random field changing.

dc restorer — A feedback-type restorer acts during the backporch time. Not affected by presence of color burst. Does not distort the burst. Front-panel switch can disable the restorer—when other than video waveforms are viewed.

Cabinet Model also available. Same features as RM Model and designed for side-by-side mounting with a picture monitor in standard racks. Takes only $8\frac{3}{4}$ " of rack space. Field case offered as an optional accessory for Type 529.

Available throughout the world

WORLD MEDIUM WAVE GUIDE 1966

Complete and accurate list of all medium wave broadcasting stations in the world — incl. all North American medium wave stations ... For each station is indicated frequency, name, country, call letters and power.

Price: DKr. 14.00, \$ 1.90, £ 0/14/6, DM 8.50, Sw.Kr. 9.90. Postage extra DKr. 1.75, \$ 0.25, £ 0/1/9, DM 0.90, Sw.Kr. 0.90.

NEWS FROM AROUND THE WORLD 1966

The key to the worldwide listening pleasure, printed in either English or Russian language. Your hour-by-hour guide to the news broadcasts in all main languages from the four corners of the world. A guide for everyone who wish to be informed, a complete listing on news you can hear direct from where it happens and told by those, who are making it. Price: DKr. 14.00, \$ 1.90, £ 0/14/6, DM 8.50, Sw.Kr. 9.90. Postage extra As for Medium Wave Guide.

There is also a Russian copy available. Same price but called "The World Today".

WORLD RADIO BULLETIN

Published fortnightly. Contain: the latest news from Broadcasting Stations throughout the World. — Prices: Airmail. Annually. DKr. 50.00, US \$ 7.30, £ 2/12/0, DM 30.00, Sw.Kr. 38.50. Six months DKr. 30.00, US \$ 4.00, £ 1/12/0, DM 18.00. — Ordinary mail: Annually DKr. 33.00, US \$ 5.00, £ 1/15/0 DM 20.00, Sw.Kr. 25.00. Six months DKr. 18.00, US \$ 3.00, £ 1/-/1, DM 12.00, Sw.Kr. 15.00.

UNDER PREPA- RATION

During the first months of 1966 two interesting, brand new books will be published: TRANSISTOR'S IN PRACTICE and The RADIO-CONSTRUCTORS HANDBOOK. The first one gives an educational survey of the theory behind a modern half conductor, how it is build and its functions — followed by a number of diagrams and descriptions of "how to build" transistorized equipments of many kinds. The latter give detailed descriptions of radio- and TV-components, how they are produced and how to choose the right component for each certain purpose. The authors continues with practical hints regarding the most modern way of constructing electronic equipments of all kinds ... more than 50 descriptions and diagrams are offered you in this new book. Detailed descriptions of "How to build" all kinds of modern electronic equipments.

Send us your request for brochure.

MORE INFORMATION on page 66

sonality. When Radio, and even more TV, are present at public events, at contests in sports or the arts, at ceremonies or manifestations, they convey a sense of participation which serves to weld the nation and to create the climate for emulation.

Beyond the transmission of factual information, broadcasting fulfils an important informational function through the documentary, the dramatic or composite presentation of a problem or a situation in its depth and context. It is here that broadcasting seeks to penetrate beyond the daily, the obvious and the apparent, in order to convey a more basic and vivid understanding required for decision-making and intelligent citizenship. The purpose of the documentary is thus not merely informational but motivational. It is to create the emotional climate, the intellectual stimulus for awareness and action.

Particularly in a developing society, information has always educational undertones, while education will be filled with content of a new information. But their objectives are different. Information stresses the transmission of content. Education implies purposeful growth of the individual and the group, more or less systematic acquisition of knowledge, and preparation for action, whether within the context of an educational curriculum or in the adult community.

In adult education, broadcasting seeks to stimulate knowledge and activity in such fields as agriculture, health, or citizenship. But here the broadcast medium must be linked with inter-personal communication, for man will assimilate into his own life only what has been endorsed by those whom he traditionally respects in family or village. Discussion of broadcasts in radio farm forums or teleclubs is thus an essential part of the utilization of these media for educational purposes. Such discussions are particularly effective if provision is made for feed-back of questions and reactions from audience groups to broadcast stations.

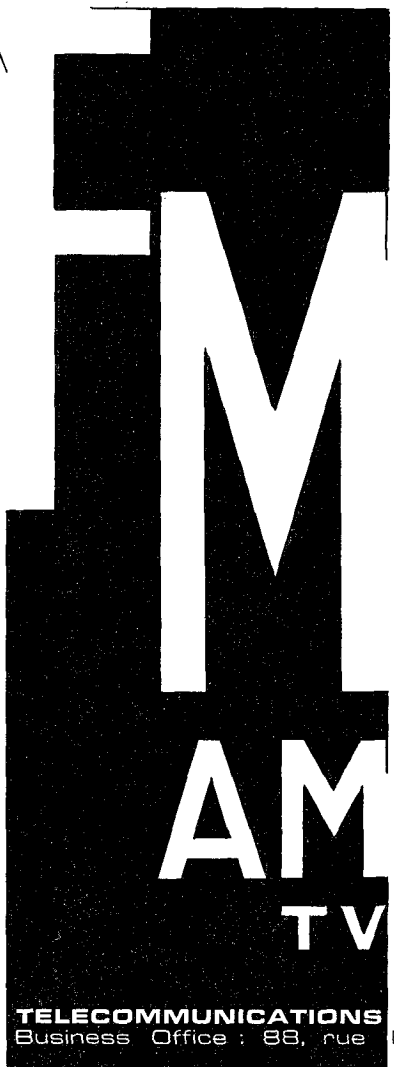

As long as 700 million people in the world are illiterate, man will remain enslaved by ignorance. The first task is to bring an increasing number of children into schools which are adequately staffed, equipped and housed. The second task, to be undertaken concurrently, is to educate adults in ways of improving their livelihood, of increasing their knowledge, and of participating actively in a progressive society.

Here broadcasting can make one of its most significant contributions, for it does not require literacy to be understood, while it constitutes at the same time a motivating force toward literacy through the curiosity it arouses and the stimulation it provides to reception groups. Moreover, television may also serve as a direct tool of literacy instruction.

The inter-personal link is equally important in all efforts to use broadcasting for instruction. Whether it be in the teaching of modern languages or of literacy, in agricultural instruction or domestic management courses, the presence of a teacher or monitor on the reception end, who is able to complement the broadcast message, adds immeasurably to the effectiveness of such impersonal but widespread teaching. The one-way communication channel of broadcasting has its educational limitations; but the hunger for education and the dearth of resources make it nevertheless a valuable tool of the educator if it is properly used.

In the education of children, broadcasting can fulfil a particularly effective role in the training of

SOLAR ACTIVITY IN 1966

by Prof. Dr. M. Waldmeier, Zürich

Prof. Dr. M. Waldmeier

After the successful completion of the International Geophysical Year (IGY) 1957/58 it turned out that for many disciplines, especially for the ionospheric researches a period of comparison at a time of low solar activity is needed. As the IGY coincided with a maximum of solar activity, it was decided to have the comparison-period around the coming solar minimum. When in 1960 the date of this period had to be fixed, the solar experts were unable to predict whether the sunspot minimum had to be expected for 1964 or for 1965. Therefore the comparison-period, now known as the International Quiet Sun Year (IQSY) was arranged to comprise both years, 1964 as well as 1965. Now as IQSY comes to its end we may state that the period was well chosen. This can be seen from the run of the monthly Sunspot Relative-Numbers:

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sep.	Oct.	Nov.	Dec.
1964	15.3	17.7	16.5	8.6	9.5	9.1	3.1	9.3	4.7	6.1	7.4	15.1
1965	18.5	14.3	11.3	6.8	26.4	15.5	11.9	8.6	16.3			

The lowest observed values occurred in July and September 1964. When smoothing out the month by month fluctuations one gets a broad minimum extending at a value of 10 from June to November. Therefore September may be regarded as the time of the sunspot minimum. Actually the lowest smoothed relative-number, 9.7, was found in October 1964. To fix definitively the time of the minimum we have to await for the end of 1965.

After the prolonged minimum the solar activity was significantly increasing again from December 1964. At the beginning of the new cycle increase is at a low rate but will be larger in the years to come. It is to be expected that the smoothed sunspot numbers will rise from about 20 at the beginning to about 50 at the end of 1966. Therefore, the yearly mean will be about 35, very close to the corresponding value for 1962 (38). This means that the electron concentration in the ionosphere, the critical frequencies, and the conditions in high frequency radio communications will be the same as in 1962. As far as disturbances are concerned, 1966 may be strikingly different from 1962. The year 1966 on the ascending branch of the solar curve will produce more sudden ionospheric disturbances, but less ionospheric storms than the year 1962 on the descending branch.

As in the past years, the daily relative-numbers for the expired month as well as predictions for the coming six months are emitted by the Swiss Short-wave Service. The present emission time-table valid till May 1st, 1966 is as follows:

Times GMT ¹⁾	ke	Destination
*07.55	9670/11865	Japan, China
*09.40	11865/15305/ 17820/21520	Australia/NZ/So. Ea. Asia

EUROVISION IN 1966

(continued from page 32)

was already linked to the E.B.U.'s Coordination Centre in Bruxelles, and between Bruxelles and Wiesbaden, the operational headquarters of the Zweites Deutsches Fernsehen. Stage 2 of the scheme, corresponding to the permanent leasing of a network of vision circuits, is, however, still in the discussion stage. Negotiations are in progress regarding the conditions for the long-term lease of the vision circuits from the Administrations, and the E.B.U. has recently begun a study of methods of remotely switching and supervising such a network, as well as a traffic study to facilitate the choice of the most advantageous configuration for the network.

Radio & Television in the developing countries

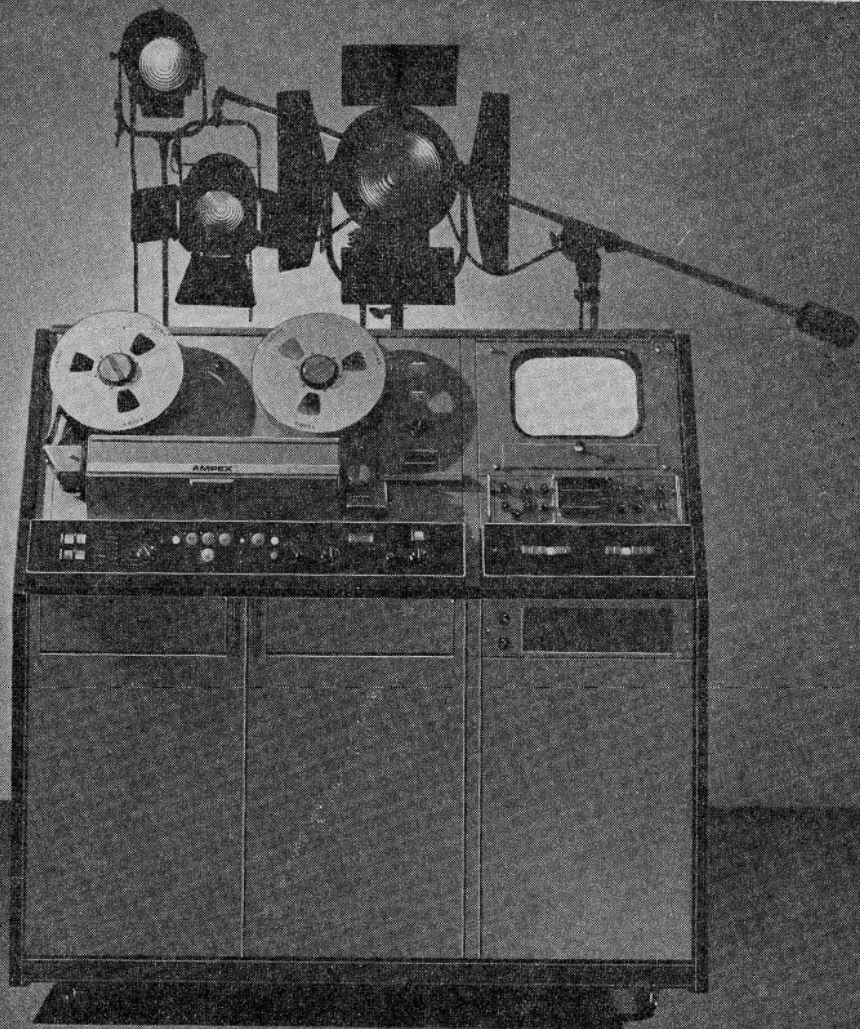

(continued from page 46)

teachers in service. The undertrained, isolated teacher is present in rural and urban communities of all developing countries.

Addressing itself directly to pupils in the classroom, Radio and Television come to supplement the work of the teacher, to introduce the aural illustration of music and sound or the visual documentation normally absent in class. The degree to which such school broadcasts take over the teaching load will depend upon the qualifications of teachers, their skills and knowledge in specialized subjects, and the availability of schools. Under extreme circumstances of lack of school facilities, broadcasting, especially the more complete medium of television, can become major channels of instruction.

The uses of Radio and Television for information and education in developing countries are rich and manifold. Their application, however, is frequently still of a limited nature; even our knowledge as to how they may be applied in tropical areas or in the isolated mountains of Asia and Latin America is only rudimentary. All too frequently it is based largely on experience in more highly developed societies. There lies a broad, uncharted road ahead which passes through establishment of facilities and training of personnel, to the systematic and creative application of Radio and Television to the vital needs of information and education which harass all developing societies.

Where to obtain the WRTM: see page 303

The video recorder that sets a new standard: The Ampex VR-2000

Ampex's Videotape* Television Recorder, VR-2000 is expressly designed to operate on new high band standards. It utilizes a new high band carrier/deviation frequency (7.16 to 9.3 mc), which permits a single standard for both colour and monochrome. The VR-2000's performance specifications are impressive: a S/N ratio up to 46 db; basic frequency response to six megacycles; excellent transient response and virtually non-existent moire. Performance is so good, in fact, that multiple generation copies made on the VR-2000 equal original tapes made on present equipment.

AMPEX

Although it possesses all this upper range ability, the VR-2000 is instantly switchable to present low band standards in either 625 or 525 lines. And for all its sophistication, it is the most reliable and easy to operate recorder ever built. A complete line of VTR accessories is available now for the VR-2000: Intersync* (standard on all VR-2000s); Amtec;* Electronic Editor; Colortec;* and Editec.* The VR-2000 and its accessories are products, not promises. The VR-2000 is presently in most of the world's television networks. Write today for complete information.

Ampex sales and service facilities are conveniently located throughout Europe and the Middle East. For more information write to: Ampex Great Britain Ltd., Acre Road, Reading, Berkshire, England. Telephone Reading 84411. Ampex S.A., Via Berna 2 Lugano, Switzerland. Telephone 091/3.81.12. Ampex Europa, G.m.b.H., 6 Frankfurt Main, Dusseldorfer Strasse 24, Germany. Telephone 252001-5. Ampex, 41 Avenue Bosquet, Paris 7e, France. Telephone 705.38.10.

INTER-CONTINENTAL TELEVISION PROGRESS 1965 - FUTURE 1966

By Edgar T. Martin, Engineering Manager and George Jacobs, Chief Frequency Division Voice of America,
Washington, D. C. 20547.

The year 1965 can be considered as an important turning-point in the brief history of inter-continental relay of television broadcasts by means of space satellites. The successful launching of the EARLY BIRD communication satellite by the USA early during the year, marked the transition from the purely experimental to the commercial era for space communications.

The history of inter-continental television began on July 23, 1962, when the TELSTAR 1 satellite forged a television link between Europe and North America for the first time. Between late 1962 and the end of 1964, TELSTAR 1 was eventually joined by RELAY 1, TELSTAR 2, RELAY 2 and SYCNOM 3, each with intercontinental television relay capability. Those communication satellites were, however, experimental models, launched to gather information with which it was hoped to eventually develop a global commercial communication satellite system. While the TELSTAR, RELAY and SYCNOM satellites were used for a total of more than 300 experimental inter-continental television relays, they were not available for public use on a commercial basis.

The creation of a Communication Satellite Corporation (COMSAT) in the United States; the signing, by late 1965, of an agreement by forty-six countries to participate in COMSAT as partners, and the launching of the EARLY BIRD satellite, marked the end of the purely experimental phase of space communications, and the beginning of a new phase - the first steps in the establishment of a global commercial communication satellite system.

EARLY BIRD, the world's first commercial communication satellite, was launched by the United States for COMSAT on April 6, 1965. A series of intricate, ground-controlled maneuvers over ten-day period enabled the satellite to be placed in an al-

most perfect synchronous orbit, approximately 38,900 kilometers (22,300 miles) over the equator above the Atlantic Ocean between Brazil and the western hump of Africa. Appearing as a stationary source in the sky, EARLY BIRD is providing up to 240 simultaneous voice channels or a single television channel for commercial two-way communications between North America and Europe on a 24-hour basis.

The EARLY BIRD satellite, for the first time makes available to the broadcasting networks and organizations of North America and Europe a means for inter-continental relay of news and special event television programs on a scheduled, commercial basis. Indeed, during 1965, television viewers on both continents witnessed several instances of history in the making - live and immediate - as a result of the EARLY BIRD satellite. Among television broadcasts relayed by the satellite were the spectacular launch of the two-man GEMINI-4 space capsule from Cape Kennedy; a dazzling program in color, originating in London, titled "A New Look At Old England"; and what was perhaps the most dramatic of all, a seven-hour relay of Pope Paul's historic one-day visit to the United Nations and New York City. Tens of millions of television viewers in North America and Europe witnessed the Holy Father as he made his eloquent and stirring appeal for world peace.

The year 1965 also witnessed another important step-forward in the history of space communications, the launching of MOLNIA-1, the Soviet Union's first communication satellite. The satellite was launched on April 23, and is in a highly eccentric orbit which takes it between approximately 600 kilometers (360 miles) and 40,000 kilometers (24,000 miles) above the earth's surface. In such an orbit, MOLNIA-1 is being used to relay communi-

GEORGE JACOBS

George Jacobs was born on July 16, 1924, in New York City. He received his B.E.E. degree from Pratt Institute, Brooklyn, 1949, and his M.S.E.E. degree from the University of Maryland in 1960.

Mr. Jacobs is a representative of the Interdepartment Radio Advisory Committee (IRAC) and several other policy-level U.S. Government committees in the field of telecommunications. He has served as a delegate to several international broadcasting and telecommunication conferences, including the 1959 ITU Administrative Radio Conference, where he was the U.S. spokesman for high frequency broadcasting. Most recently he attended the Tenth Plenary Assembly of the C.C.I.R. and the I.T.U.'s International Space Communication Conference, both held in Geneva during 1963. Mr. Jacobs was the U.S. Delegation's spokesman for satellite broadcasting at both conferences.

Mr. Jacobs is a Senior Member of the IEEE, a member of URSI, and a registered Professional Engineer in the District of Columbia.

EDGAR T. MARTIN

Edgar T. Martin was born on May 1, 1918, in Princeton, West Virginia. He received his B.S.E.E. in 1938 and his M.S.E.E. in 1953, both from Virginia Polytechnic Institute. He also holds an M.A. in Government from American University, conferred in 1957 and an LL.B. from George Washington University. In 1959, he earned his LL.M. from Georgetown University.

He is a registered Professional Engineer in Virginia and the District of Columbia, and he is also a member of the Virginia Bar. He has attended more than a dozen major international conferences dealing

with broadcasting and telecommunications, and was a delegate to the ITU's Administrative Radio Conference held in Geneva.

POWERED TO TUNE THE WORLD AND LOCAL FM'S FINE MUSIC!

*New Zenith
TRANS-OCEANIC®
9-Band
Portable
Radio!*

MODEL ROYAL 3000-1

THE ONLY RADIO OF ITS KIND IN THE WORLD!

This famous radio—the only one of its kind known world-wide—tunes medium wave, long wave, and short wave from 2 to 9 MC... plus the 31, 25, 19, and 16 meter International bands for news direct from listening posts all over the world. That's why its full list of owners reads like an International "Who's Who"—its coverage is so broad, its station selection so precise, its performance so dependable!

Tunes Static-Free FM, Too

But, in addition to all this, the Trans-Oceanic tunes glorious FM with virtually no drift or fade. Interference, cross-talk or overlap are reduced. There is no annoying static, no wave-jamming. You hear only rich, pure, beautifully clear tone as perfected by Zenith, pioneer manufacturer of super-sensitive FM radios.

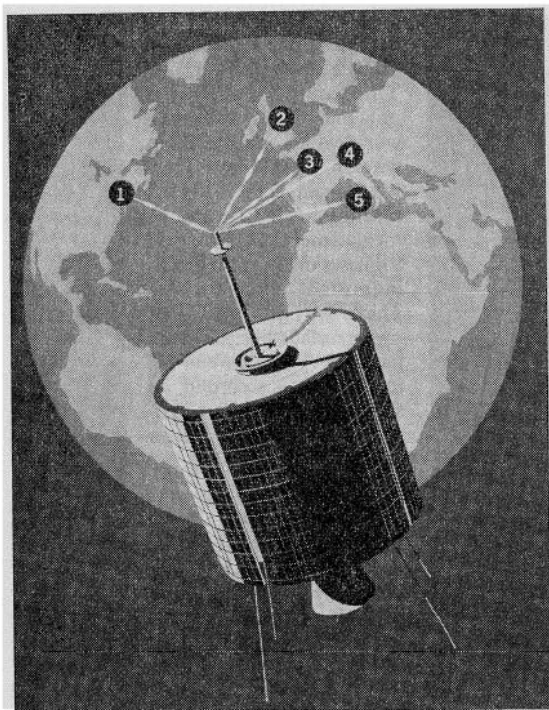

Perfect For Use At Home, At Work, At Play, Or While Traveling

If you are among the more discriminating who will treasure the distinction of owning this unique radio and the wealth of world-wide information it brings, write now for all the details on the new Trans-Oceanic plus the name of your nearest Zenith representative!

The Quality Goes In Before The Name Goes On

Zenith Radio Corporation, Chicago, U.S.A.
The Royalty of television, stereophonic high fidelity
instruments, phonographs, radios and hearing aids.
46 years of leadership in radioelectronics exclusively!

Artist conception of the EARLY BIRD satellite. Viewing one-third of the globe above mid-Atlantic. EARLY BIRD, the world's first commercial communications satellite, is relaying telephone calls, television, teletype and photo-facsimile transmission between North America and Europe twenty-four hours a day.

cations within the Soviet Union for about eight hours a day. Russian officials have reported that the satellite is working very well, and that it has been used to link the television center in Moscow with Vladivostok, some 7500 kilometers (4500 miles) to the east, in Siberia.

The inter-continental, or perhaps more appropriately, inter-spatial television thrills of 1965 did not all come about as a result of communication satellites. Television cameras aboard the American spacecraft RANGER-9, flashed back to earth live television pictures of the moon's surface as the spacecraft approached the heavenly body. Relayed by the national television networks, viewers in North America were treated to an unprecedented glimpse of the moon's mountains, valleys and craters, which were clearly visible almost to the instant that the spacecraft impacted on the moon's surface on March 24.

A week earlier, on March 19, television viewers in Eastern Europe witnessed a history-making walk in outer space. Television cameras aboard the Soviet Union's two-manned spacecraft VOSKHOD-2 were focused on Cosmonaut Leonov as he left the spacecraft, and performed maneuvers for 20 minutes several hundred kilometers above the earth's surface. The television pictures, flashed to a ground station in the Soviet Union, were relayed to viewers in Eastern Europe through the facilities of the Intervention network.

On July 14, the American MARINER-4 spacecraft passed within 8500 kilometers (5100 miles) of the planet Mars and sent television pictures of its

surface back to earth. As MARINER-4 passed Mars, a single television camera viewing the planet through a reflecting telescope mounted aboard the spacecraft, took 22 black and white photographs of the Martian surface. The pictures, the first ever to be taken of Mars from such a close distance, were flashed to scientists at a ground station in California, 134 million miles from the spacecraft! After being assembled and studied, the national television networks flashed the pictures to viewers throughout North America, affording an unusual opportunity for a never-before-seen closeup view of the Martian surface.

The year 1966 is expected to see continued advancements in inter-continental television. COMSAT has announced plans to launch a second EARLY BIRD satellite over the Atlantic during 1966, as well as one over the Pacific Ocean, to link North America with Asia and Oceania. Also on the drawing-boards are future COMSAT satellites which will provide 1000 to 1200 telephone channels or at least 4 TV channels simultaneously. This technological improvement in the capacity of future COMSAT satellites will enable significantly greater access to earth stations, and is expected to bring a truly global commercial communication satellite system into being by as early as 1968.

To accommodate the COMSAT satellites, several additional earth stations are expected to be brought into operation during 1966, to supplement those already in operation at Andover, Maine; Goonhilly Downs, the United Kingdom; Pleumeur-Bodou, France; Reasting, Germany; Fucino, Italy; Grinon, Spain and Tokyo, Japan. COMSAT plans to construct earth stations in Hawaii and the state of Washington; Canada has one under construction in Nova Scotia; Australia; New Zealand; the Philippines and Thailand are planning earth-stations in Oceania and Southeast Asia; Argentina, Brazil, Chile and Peru have begun construction of earth stations in South America; both India and Pakistan are moving ahead with earth station planning; and Israel, the UAR, and possibly Ethiopia and Nigeria hope to have earth stations under construction during 1966.

The list of forty-six countries that are presently partners with the USA in COMSAT is expected to grow larger during 1966. At least a dozen countries have indicated an interest in joining this international joint venture into space, and several others are also likely to sign the COMSAT agreement.

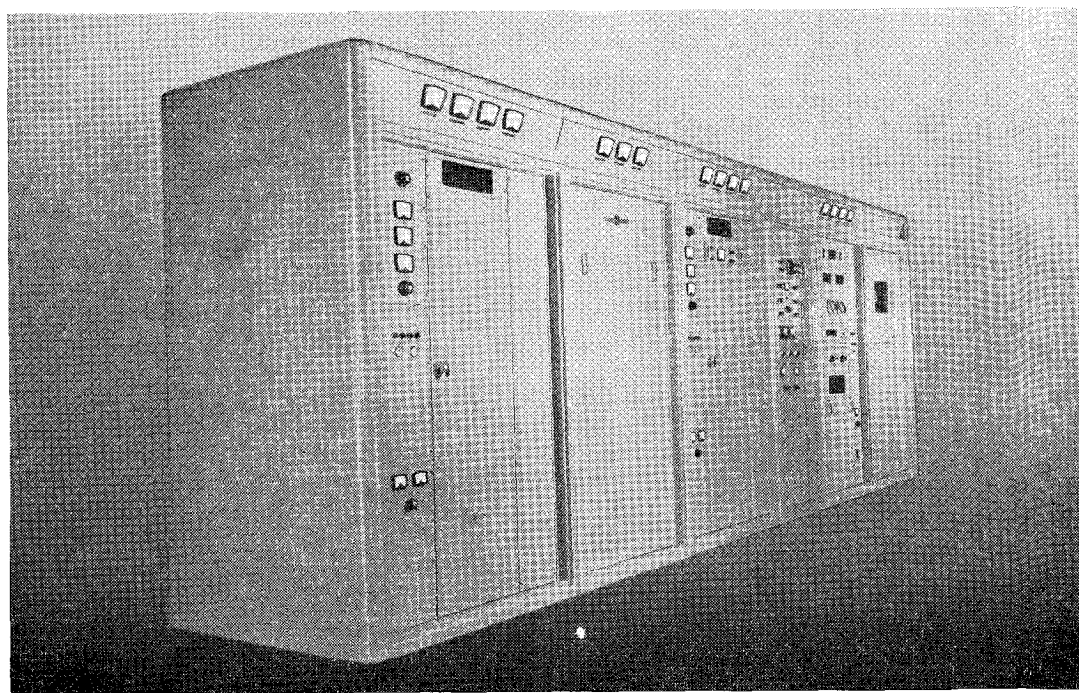

All, in all, it looks as if inter-continental television will continue to grow during 1966, to include more continents and considerably more countries than during 1965.

Inter-spatial television is also expected to progress during 1966, as spacecraft, both manned and unmanned probe deeper and deeper into space. Viewers on earth are likely to see more detailed pictures of the moon's surface, and of other planets as television cameras aboard the spacecraft flash pictures back to earth across the voids of space.

President Kennedy's life came to a tragic end on November 22, 1963—but his dreams live on. The year 1966 is expected to see considerable progress in the realization of his dream for a global commercial communications satellite system in which the entire world would participate, and from which all mankind would benefit.

WHERE TO LISTEN FOR SATELLITE SIGNALS

By George Jacobs, Chief, Frequency Division, Voice of America, Washington, D. C. 20547.

As of October 1, 1965, fifty-seven space orbiting satellites were transmitting radio signals back to earth on no fewer than 112 different frequencies in the h.f., v.h.f., and u.h.f. ranges of the radio spectrum. Many of these transmissions could be received by radio amateurs and space-listeners on earth listening with relatively inexpensive receiving equipment.

Radio transmissions from satellites consist mainly of beacon or telemetry signals. Beacon signals are usually transmitted continuously, and are used by ground stations for tracking a satellite. These signals can be identified by their steady tone when the receiver's beat frequency oscillator (BFO) is in the ON position. Telemetry signals, on the other hand, are somewhat more difficult to receive. These signals usually consist of two or more musical tones transmitted at the same time, or in the case of the Russian COSMOS satellites, of a sequence of dots and dashes of varying lengths. Telemetry signals contain scientific data recorded on instruments aboard the satellite, and are decoded by ground stations equipped with special telemetry receiving equipment. Most satellites do not transmit telemetry data continuously, but only for short periods of time when commanded to do so by ground stations.

The Radio Regulations of the International Telecommunication Union, Geneva, allocate the following h.f., v.h.f., and u.h.f. bands for satellite transmissions. Most, but not all of the satellites now in orbit transmit in at least one of these bands. A few satellites are using frequencies that are not allocated for space transmissions.

<i>Band</i>	<i>Purpose of Allocations</i>
10,003 - 10,005 kc/s	space research
15,762 - 15,768 kc/s	space research
18,030 - 18,036 kc/s	space research
19,990 - 20,010 kc/s	space research
20,007 kc/s	may be used in an emergency, in the search for, and rescue of, astronauts and space vehicles
30,005 - 30,010 kc/s	space research
39,986 - 40,002 kc/s	space research
136 - 137 mc/s	space research (telemetry and tracking)
137 - 138 mc/s	meteorological satellites, space research (telemetry and tracking) and space service
143.6 - 143.65 mc/s	space research (telemetry and tracking)
144 - 146 mc/s	radio amateur space activities
148.25 mc/s ($\pm$ 15 kc/s)	space telecommand
149.9 - 150.05 mc/s	radionavigation satellites
154.2 mc/s ($\pm$ 15 kc/s)	space telecommand
183.1 - 184.1 mc/s	space research
267 - 273 mc/s	space (telemetry)
399.0 - 400.05 mc/s	radionavigation satellites

400.05 - 401 mc/s

401 - 402 mc/s

449.75 - 450.25 mc/s

460 - 470 mc/s

meteorological satellites

Almost every satellite launched by the United States of America transmits beacon or telemetry signals in the 136 - 137 mc/s band; some also transmit in the 19,990 - 20,010 kc/s, 39,986 - 40,002 kc/s, 144 - 146 mc/s, 399.9 - 400.05 mc/s and 400.05 - 401 mc/s bands, as well as on 41 mc/s, 54 mc/s, 150 mc/s, 162 mc/s, 320 mc/s, 324 mc/s and 360 mc/s.

Almost every Russian satellite transmits either beacon or telemetry signals in the 19,990 - 20,010 kc/s band; some also transmit in the 30,005 - 30,010 kc/s band as well as in a narrow band near 90 mc/s.

Many of the signals from both Russian and American satellites transmitting in the h.f. bands (especially near 20 mc/s), can often be heard well on relatively inexpensive short-wave receivers. Satellite signals in the v.h.f. and u.h.f. bands (especially in the band 136-137 mc/s), can often be received with relatively simple frequency converters used with short-wave receivers.

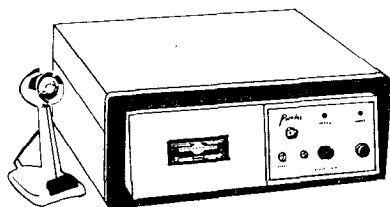

The following list contains those frequencies on which space orbiting satellites were transmitting as of October 1, 1965. Many of these satellites are expected to continue to transmit radio signals during 1966. The list gives the popular name of each satellite, the country responsible for it, and the date of launch. Also given are the period of the satellite's orbit, the satellite's inclination, and whether the satellite's signal is beacon (c.w.) or telemetry, and whether it is continuous or transmitted only upon command.

The period and inclination data should be useful in identifying satellites from which signals are being received. The satellite's *period*, given in minutes, is the time it takes for it to complete an orbit. By timing reception on successive orbits, it is often possible to identify the satellite. *Inclination* is the angle that the satellite's orbit makes with the equator. If a directional antenna is being used to receive satellite signals, the inclination data can be used for determining the direction from which a signal initially will be heard.

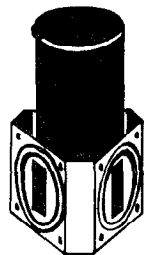

The exact time that a satellite passes overhead, or nearest to a listener's location as it orbits in space can be determined by noting the *Doppler shift* on the satellite's signal. The relative velocity of the satellite with reference to a listener on earth causes the satellite's signal to change pitch. The frequency on which the satellite is transmitting will appear to increase as the satellite approaches, and decrease as it moves away from the listener on the ground. The satellite is nearest to being overheard at the instant the pitch of its signal begins to decrease. At 20 mc/s the Doppler shift will be approximately one kilocycle each side of the center frequency, while at 136 mc/s the shift can be as much as six kilocycles. The Doppler shift on the satellite's radio signal is identical to the effect observed when listening to a train whistle or an automobile horn as the vehicle is either approaching, or moving away from the observer at relatively high speeds.

1 Source for Telecommunication Equipment

Joseph Plasencia, Inc., provides a single source for your telecommunication equipment needs, among which the lines shown below:

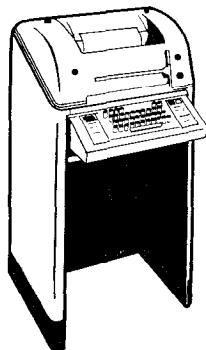

GUIDE INDUSTRIES
Precision-made, reliable microwave components, including waveguide elements, attenuators, waveguide switches, wave meters, mixers, etc.

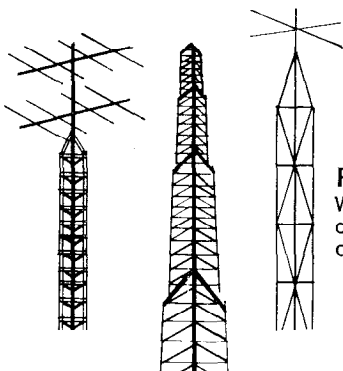

INDUSTRIAL RADIO CORP.
"Premiere" 2-way radios, mobile and base station, in both VHF bands.

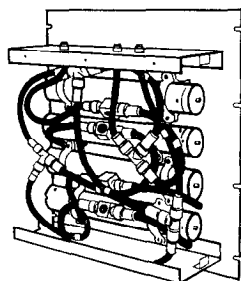

METRO-TEL CORP.
Complete range of teletype equipment (rebuilt to factory specifications), tone multiplexing equipment, data transmission equipment and pocket paging systems.

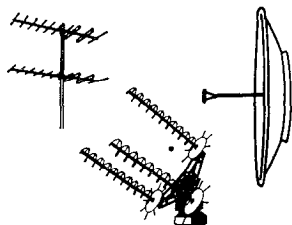

ROHN MANUFACTURING CO.
World's largest exclusive manufacturer of TV and communication towers (micro-wave, radio, crank-up, etc.)

SINCLAIR RADIO LABORATORIES
Duplexers (mobile and base station), multicouplers, band-pass filters, base station antennas.

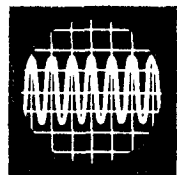

TECHNICAL APPLIANCE CORP. (TACO)
Most complete range of antennas and antenna systems in the U.S. (microwave, airborne, yagis, telemetry, parabolic reflectors, etc.)

For information on the above products, and for quotations, on your requirements for other types of communication equipment and accessories, write to:

Unmatched versatility for communications, surveillance, systems design, or laboratory instrumentation . . .

NATIONAL'S NEW HRO-500 HF/VLF RECEIVER IS TOTALLY SOLID STATE... OUTPERFORMS CONVENTIONAL TUBE UNITS... AND IS FAR LOWER IN COST!

National's new HRO-500 receiver is totally solid state for versatility, portability, and reliability. It incorporates a phase-locked frequency synthesizer to cover the extraordinary range of 5 kilocycles to 30 megacycles in sixty bands, with identical stability, tuning rate, and high calibration accuracy throughout. Complete SSB/CW/AM facilities are provided, as well as all necessary outputs for operation of ancillary equipment. ■ Total solid state design provides remarkable versatility and reliability, as well as simplified power and cooling requirements. The HRO-500 operates directly from either 115/230 V.A.C. or 12 V.D.C. sources (12 volt current drain is only 200 ma at low audio output with pilot lamps switched off). Transistors provide instant-on operation without delay or warm-up drift. ■ Entire VLF and HF spectrums . . . from 5 Kc to 30 Mc . . . are tuned continuously with 1 Kc dial calibration and 10 Kc per turn tuning rate. The HRO-500 provides better than $1.0 \mu\text{V}$ for 10 db S/N SSB/CW sensitivity with 60 db minimum image rejection (optional LF-10 preselector is recommended for optimum VLF performance). Effective dial scale length is 24 feet per megacycle, with $\frac{1}{4}$ " spacing between one-Kc calibrations. ■ Frequency is determined by a phase-locked crystal frequency synthesizer, which eliminates multiple crystal oscillators for high frequency oscillator injection. All HFO signals are synthesized from the output of a 500 Kc master crystal oscillator for maximum stability and elimination of band-to-band recalibration. Long-term stability from turn-on is equal to that of the best tube-type commercial receivers *after* warm-up. ■ Dynamic range and cross-modulation characteristics are equivalent to, or better than, many competitive tube-type receivers of similar sensitivity. ■ The HRO-500 provides superb SSB/CW/FSK performance with separate product detector, fast-attack, slow-decay AGC, and selectable sideband. The tunable filter provides four discrete I.F. bandwidths of 500 cps, 2.5, 5.0, and 8 Kc, with nominal 6-60 db shape factor of 2.5:1. *Passband Tuning* is provided in the 500 cps and 2.5 Kc bandwidths, for selectable sideband or single-signal reception without change in frequency or beat-note. ■ The HRO-500 is compact in size and light in weight: $7\frac{7}{8}$ " H, $16\frac{1}{2}$ " W, $12\frac{3}{4}$ " D; weight only 32 lb. A rack mounting kit is available for standard $8\frac{3}{4}$ " RETMA panel. ■ Write to National for detailed information, performance data, and complete specifications.

RELIGIOUS BROADCASTING ORGANIZATIONS

WORLD ASSOCIATION FOR CHRISTIAN BROADCASTING

(formerly "World Committee for Christian Broadcasting"), constituted at its Limuru, Kenya, Assembly, May, 1963.

Purpose: "to provide a working fellowship of churches, agencies, organizations and persons concerned with the use of radio and television to proclaim the Christian Gospel in its relevance to the whole of life, and with the role of these media in society" (WACB Constitution).

Address: Edinburgh House, 2 Eaton Gate, London S.W. 1.

Chairman: Bishop Dr. Fridtjov Birkeli, Stavanger, Norway-Vice-chairman: Rev. K. D. Bhasker, 15, New Civil Lines, Jabalpur, M.P., India-Secr: W. N. Haddad, Box 5376, Beirut, Lebanon-Treasurer: Rev. F. R. Wilson, 475, Riverside Drive, New York 27-Executive Director: Rev. Edwin H. Robertson, Edinburgh House, 2 Eaton Gate, London S.W. 1., England. Associate to the Exec. Dir: Rev. C. Michael de Vries, 150 Route de Ferney, 1211 Geneva 20, Switzerland-Regional Rep'r's: Africa, E. Fashade, Box 67, Ilesha, Nigeria-Asia, M. Ogawa, Christian AV Center, 22, Midorigaoka, Shibuya Ku, Tokyo, Europe; Rev. Dr. R. Ley, Stäfa, Zurich, Switzerland, Latin America, Dr. A. J. Ribeiro, C.P. 943, Campinas, São Paulo, Brasil. Near East; W. N. Haddad Box 5376, Beirut Lebanon. No. America; Dr. H. C. Spencer, 1525, McGavock St, Nashville, Tennessee, USA. Editor "The Christian Broadcaster": Rev. H. H. Hoskins, BBC, London W. 1. Editor "Medium" (German): Christian Hoffmann, Birkerstrasse 22, 8 München 2, Germany.

WORLD COUNCIL OF CHURCHES

The Rev. C. Michael de Vries, Secretary for Work in the Field of Broadcasting, Dept. of Information. Addr: 150, Route de Ferney, 1211 Geneva 20, Switzerland.

The Lutheran World Federation. Same address. The addr. of the Lutheran World Federation Broadc. Sec. is P.O. Box 654, Addis Ababa, Ethiopia - Dir. of Broadc: Rev. S. Aske, Ph. D. - Public-occasional newsletters.

ROMAN-CATHOLIC

Pontifical Commission for the Communications Media.

Addr: Palazzo S. Carlo, Vatican City State. Pres: Archbishop of Laodicea in Syria the Most Reverend Martin J. O'Connor.

UNDA: Association catholique internationale pour la Radiodiffusion et la Télévision (International Catholic Organization for Broadcasting and Television).

Protector: Bishop of Lausanne, Genève and Fribourg, Mgr. François Charrière, Fribourg, Switzerland.

Secretariat General: Rue de Romont 5, Case Postale 211, 1701 Fribourg, Switzerland.

Secr. Gen: Dr. J. Schneuwly.

Administration Council: consist of 12 members. Pres: Mgr. J. Haas, Lausanne, Switzerland. Consultative status at UNESCO.

Secretariat for Latin America: 385, Rua São Clemente, Rio de Janeiro. Dir: Miss Marina Bandeira de Carvalho, Rio de Janeiro, Brazil. Members of the Organization:

Ordinary members: Germany, England, Austria, Belgium, Scotland, Spain, France, Ireland, Italy, Luxembourg, Monaco, Netherlands, Switzerland, Vatican State. Brazil, Bolivia, Canada (English- and French speaking sections), Chile, USA, Venezuela, Malagasy Rep; Argentina, Australia, Malta, Mexico, Nicaragua, Rhodesia, New Zealand.

Extraordinary members: Denmark, Portugal, Sweden, Curaçao, Haiti, Dominican Rep, Guadeloupe, Martinique, Panama, Costa Rica, Honduras, Guatemala, El Salvador, Puerto Rico, Columbia, Peru, Paraguay, Uruguay, St. Lucia, French Guiana, Ecuador, Zambia, Burundi, Congo (Léopoldville), Congo (Brazzaville), Ivory Coast, Central African Rep, Dahomey, Upper Volta, Rwanda, Senegal, Togo, French Somaliland, Réunion, New Caledonia, Algeria, South Africa Rep, Japan, Philippines, Vietnam, Taiwan, Trinidad.

Corresponding members: Finland, Norway, Dutch Guiana, Greece, Egypt, Morocco, Tunisia, Angola, Mozambique, Basutoland, Hong-Kong, Tasmania, India, Pakistan, Lebanon, Iraq, South Korea.

UNDA-Revue: French and English.

UNDA-Nouvelles: French and English editions.

RELIGIOUS SOCIETIES PROTESTANT

ERA: Evangelical Radio Alliance, 30 Bedford Place, London W.C. 1, England. Sec: Rev. J. Hywel Davies.

IBRA Radio Mission, Box 821, Stockholm I, Sweden, Memberorganization: IBRA Radio Federation is an intern. fed. of listeners. (See Sweden).

IKOR (Ecumenical society): Interkerkelijk Overleg in Radioaangelegenheden, Hilversum, Borneolaan 27.

NCRV, Nederlandsche Christelijke Radio Vereniging, Schuttersweg 8, Hilversum.

NOREA: Nordic Radio Evangelistic Association. In connection with Norwegian Lutheran Mission. Cooperating with Trans World Radio, Monaco. Broadcasting over R. Monte Carlo. (See Norway).

VRPO, Vrijzinnig Protestantse Radio-Omroep, Hilversum, Holland.

Radio Reveil, Via Tesserete 51, Lugano.

AFRICA:

CENTAVERP: Centre des Techniques Audio-Visuelles de l'Eglise Presbytérienne Camerounaise, B.P. 187, Yaounde, Rép. Fédérale du Cameroun. Dir: D. J. Myogo. (Is owned by the Cameroun Presbyterian Church, but helps the other Protestant Churches of the Federation).

AMERICA:

Trans World Radio: Home office: 354 Main St, Chatham, New Jersey, USA. Dir. of Radio: B. L. Armstrong, M.A., B.D. (Owns and operates two st's in Monaco and Bonaire, Neth. Antilles).

National Religious Broadcasters, an association of Protestant national and intern. broadcasters on radio and tv. Pres: Dr. E. R. Bertermann, 210 North Broadway, Saint Louis 2, Missouri.

International Christian Broadcasters, an international service organization for those who use radio and television to proclaim the Gospel, and to encourage the use of these mass media throughout the world for the furtherance of the Gospel. Sponsors of national and international conferences.

Addr: 4440 Saratoga, Downers Grove, Ill, USA. Pres: Clarence W. Jones, Exec. Sec: Richard Wolff.

Lutheran Television Productions, a Board of the Lutheran Church-Missouri Synod, producing and distributing "This is the Life" and "The Fisher Family". Exec. Sec: Dr. E. R. Bertermann. Prgr. Dir: Dr. H. W. Gockel, 210 No. Broadway, Saint Louis 2, Missouri.

Difusiones Inter Americanas (DIA), an evangelical organization, established to produce, process, distribute and promote radio and tv. prgr's, recordings and audio visual aids for the evangelizing of Latin America - Addr: Apt. 2470, San José, Costa Rica.

Latin America Mission, 285 Orchard Terrace, Bogota, N.J. and Apt. 1307, San José, Costa Rica. Gen. Dir: Dr. Horace L. Fenton. Radio Dir: Paul Preitz. Publ: "Radio Headlines".

Central American Mission, (operates TGNA, Guatemala), 3611 Congres Ave, Dallas, Texas. Centro Audio-Visual Evangélico (CAVE) Produce and distribute religious, cultural audio-visual materials, like films, records projector for filmstrips and slides, radio & TV programs, primarily in Portuguese. Idem dubbing foreign language 16 mm movies. Excellent studio and laboratory facilities - Gen. Secretariate: Dr. A. J. Ribeiro. Addr: Box 943, Campinas, São Paulo, Brazil.

The Evangelical Alliance Mission, 2845 West McLean Ave, Chicago, Ill, 60647, USA. Gen. Dir: V. Mortenson. Operates HLKX, Inchon, Rep. of Korea, PJA-6, Aruba, Neth. Antilles, OAZ, Lima, Peru.

The Gospel Missionary Union. Headquarters, Drawer "C", Smithville, Mo. USA. Pres: Don P. Shidler. Publ: Gospel Message.

West Indies Mission, R. D. 1, Box 279 Homer City, Penn. USA - Dir. Gen: Rev. E. V. Thompson. Dir. of Radio Haiti Field: Rev. David Hartt. Publ: "The Whiten Harvest". Is working in the West Indies and in South America.

Broadcasting and Film Commission NCCUSA, New York, USA. National Council of Churches of Christ in the USA, 475 Riverside Drive, New York 27, Exec. Dir: W. F. Fore. RAVEMCCO, New York, USA, Radio, Visual Education and Mass Communication Committee of the Division of Overseas Ministries of the National Council of the Churches of Christ in the USA, 475 Riverside Drive, New York 27, N.Y., Exec. Sec: Dr. B. M. Luben.

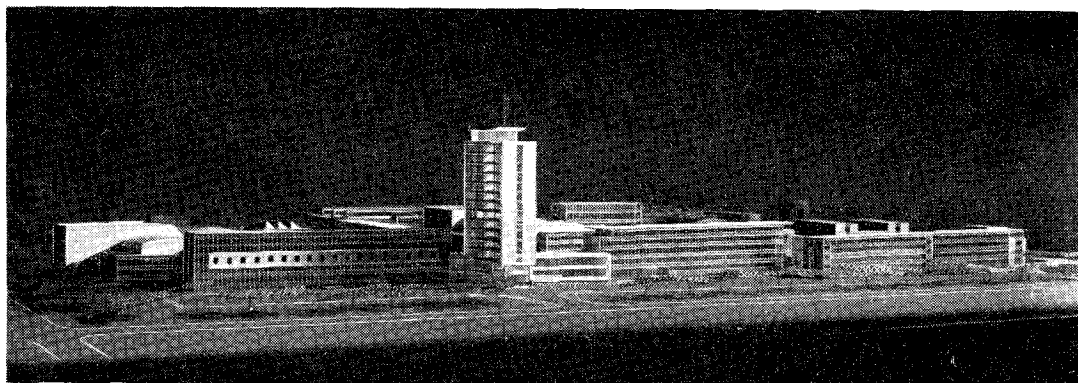

Far East Broadcasting Co. Inc, P.O. Box 1, Whittier, California. Pres: Robert H. Bowman. Private Comp. with offices in twelve countries. Publ: "FEBC Broadcaster" monthly. Operates st's in Manila (Philippines), Naha (Okinawa) & San Francisco (USA).

The Lutheran Hour "Bringing Christ to Nations", Saint Louis, USA. Sponsored by The Lutheran Laymen's League, 2185 Hampton Avenue, St. Louis, Missouri 63139. Exec. Dir: P. Friedrich. Dir. Broadc: C. Thomas Spitz. The Oriental Missionary Society and the Inter-American Missionary Society, 850 N. Hobart Blvd. Los Angeles 29, California, USA. Pres: Dr. Eugene Erny. Dir. Haiti Field incl. allied missionary activities: E. Turnidge, Box 1, Cap Haitien, Haiti. Operates ST 4VEH, Cap Haitien, Haiti.

World Radio Missionary Fellowship: HCJB-TV, Quito, Ecuador; HOXO, Panama, R.P. USA. Pres: Abe Van der Puy, P.O. Box 691, Miami, Florida. Operates La Voz de los Andes HCJB Ecuador; No. American Headquarters P.O. Box 691, Miami, Florida 33147. Canadian Baptist Foreign Mission Board, 190 St. George Str., Toronto 5, Ontario, Canada. Gen. Sec: Dr. O. E. Daniel. Operates R. La Cruz del Sur, La Paz, Bolivia.

ASIA AND PACIFIC:

The Near East Council of Churches: William N. Haddad Gen. Dir. of the Commission on Radio Broadcasting, P.O. Box 5376, Beirut, Lebanon.

STANDARD FREQUENCY & TIME SIGNAL STATIONS

The ordinary sw, listener soon notices a specialized technical prgr. of tones and time pulses usually received on carrier freq's of 2.5, 5, 10 or 15Mc and sometimes on 20 and 25Mc, if he listens in that part of the spectrum. These signals have many uses in science and technology. They are most useful to the non-specialist in obtaining accurate time, in checking the calibration of his radio receiver, and in gaining information on radio propagation conditions. The forecasts of the present and future state of the ionosphere can be quite useful in determining the possibilities of sw-reception. The forecasts are given by WWV, WWVH and JYJ for certain parts of the globe.

STATION LOL

Addr: Observatorio Naval, Avenida Costanera Sur 2099, Buenos Aires, Argentina - L.P.: Dir. Gen: J. E. Marpegán.
Standard Freq. and Signals: 5000kc 2kW - 100000kc 2kW - 15000kc 2kW: 15 Oct. to last Feb: 11.00-12.00, 14.00-15.00, 17.00-18.00, 20.00-21.00, 23.00-24.00; 1 March to 14 Oct: D 12.00-13.00, 15.00-16.00, 18.00-19.00, 21.00-22.00, 00.00-01.00 - Schedule: 2 min dash (1000 or 4400c alternately) beginning at 00.00, 00.05, 00.10 etc. Then 3xLOL in morse followed by "Observatorio Naval Argentina" followed by hrs & min's, preceding dash tone. T.S. transmission at min. 55-59 in each h - V. by QSL-card or letter. Re. wanted.

STATION VNG - AUSTRALIAN POST OFFICE

Addr: Station VNG, c/o Assistant Dir. Gen, Radio Section, Postmaster-General's Dept, 57 Bourke St, Melbourne C. 1. Australia.
Cable: "Gentel" - Stations: Lyndhurst: 5425kc 1kW: 12.00-22.30 - 7515kc: 12.00-22.30(10kW), 22.30-12.00(1kW) - 12005kc 10kW: 22.30-12.00 - The st. has bursts of 1000 c/s per second tone each second, exc. the 59th second of each min. Just before each h recording is played: "This is an Australian Post Office time signal tr. from VNG in the 5.5, 7.5 or 12Mc bands" - V. by QSL-card.

STATIONS VHP (Belconnen) & VIX (Sydney)

Addr: The Astronomer, Commonwealth Observatory, Mount Stromlo via Canberra, Australia - Stations: VHP/VIX 44kc: 00.25-00.30 (exc. Tues, Thurs); VHP/VIX4 8478kc: 00.25-00.30, 07.55-08.00, 13.55-14.00, 19.55-20.00 (Belconnen & Sydney share the same freq's). Other available freq's: 4286, 6428.5, 12907.5, 17256.8, 22485kc.

OBSERVATORIO NACIONAL DE ASTRONOMIA, BRAZIL

originates time signals, which are broadcast by stations PPE & PPR.
PPE: Addr: Servico da Hora, Observatorio Nacional de Astronomia, Rua Gen. Bruce 586, Rio de Janeiro, GB - L.P.: Chief Eng: C. G. Lacombe - Station: 8721kc: 13.25-13.30, 20.25-20.30, 00.25-00.30.
PPR: Addr: Radio Rio, Av. Francisco Bhering, Arpoador, Rio de Janeiro, GB - Stations: 435, 8634, 13105, 17194kc: 14.25-14.30, 21.25-21.30, 01.25-01.30.

DOMINIAN OBSERVATORY, CANADA

Addr: 3, Observatory Crescent, Ottawa 4, Ontario, Canada. Te: 232-8211 - L.P.: Addr: Dr. J. Hodgson. Dir. Tec: M. M. Thomson.
Stations: CHU 3330kc 90.09m 3kW - 7335kc 40.90m 3kW - 14670kc 20.45m 3kW - T.S: Continuous in voice and second pulses - Ann: English: "CHU Canada, Eastern Standard Time". French: "CHU Canada, Heure normale de l'est" - V. by QSL-card. Re. welcomed - Pub: Station information free.

STANDARD FREQUENCY STATION OMA

Addr: Budecska 6, Praha 2, Vinohrady, Czechoslovakia. Te: 258757 - L.P.: Dir: B. Sternberg - Stations: OMA 50kc 5kW: 24 h - OMA 2500 kc 1kW: 24 h - OLB5 3170kc 8kW: 24 h - OLD2 18985kc 8kW directed to F. East; Wed, Fri 12.30-13.00 - Ann: In morse-code - V. by letter. Re. wanted.

NATIONAL RESEARCH CENTRE OF TELECOMMUNICATIONS

Addr: Centre National d'Etudes des Télécommunications, Laboratoire de Bagneux, 196 rue de Paris, Bagneux (Seine), France - Station: FFH 2500kc 0.25kW: Tues & Fri 08.30-16.30 - Ann: Identifies in morse code every 20 min's.

BUREAU INTERNATIONAL DE L'HEURE

Addr: 61 Avenue de l'Observatoire, Paris 14, France - L.P.: Chef des Services: B. Guinot - Stations: St. André de Corcy FTA91 91.15kc: 08.00, 09.00, 09.30, 13.00, 20.00, 21.00, 22.30 - Pontoise FTH42 7428kc: 09.00, 21.00 - FTK77 10775kc: 08.00, 20.00 - FTN87 13873 kc: 09.30, 13.00, 22.30 - V. by letter.

DCF77, MAINFELINGEN

Addr: Physikalisches-Technische Bundesanstalt, Braunschweig, Bundesallee 100, Fed. Rep. of Germany. Cable: "Bundesphysik". Te: 5921 - L.P.: Pres: Prof. Ing. Kersten. Dir. of Dept. I: Prof. Dr. U. Stille. Dir: Prof. U. Adelsberger, Dr. Ohl, Dr. Süß.
Station: DCF77 77.5kc 12kW, nd W transm. extends essentially from 06.45-10.35, 19.00-20.10. Call-sign DCF77 in morse-code, amplitude modulation 4400c.

GERMAN HYDROGRAPHIC INSTITUTE

Addr: Bernhard Nocht Str. 78, Hamburg 4, German Federal Rep. Stations: Norddeich (DAN) 2614kc, Elmshorn (DAM) 4265, 6475.5, 8638.5, 12763.5, 16980kc: 11.55, 12.06, 23.55, 00.06.

GERMAN GEODETIC INSTITUTE

Addr: Deutsche Akademie der Wissenschaften zu Berlin, Potsdam-Telegrafenberg, German Democratic Republic - L.P.: Dipl. Ing. G. Hemmleb - Station: Nauen (DIZ) 4525kc 5kW: 05.00-08.15, 09.45-02.00.

NATIONAL PHYSICAL LABORATORY (Gov.)

Addr: Teddington, Middlesex, Gt. Britain.

MFS Standard Frequency Service:

kc	m	kW	kc	m	kW
60	5000	10	14.29-15.30**	5000	60 0.5 continuous*
2500	120	0.5	continuous*	10000	30 0.5 continuous*

* continuous but tr. interrupted 6 times an h at min's 5-9 1/2, 15-19 1/2, 25-29 1/2 etc - ** continuous from March or April 66.
Ann: Call sign and freq. offset (in parts in 10¹⁰) 3 times in slow morse, at min's 9 1/2-10, 19 1/2-20, etc. in each h - V. by letter.

ROYAL GREENWICH OBSERVATORY

Addr: Time Dept. Herstmonceux Castle, Hailsham, Sussex, England. The international t.s.'s are radiated by GBZ (19.6kc) at 03.00, 09.00, 15.00 & 21.00 and on high freq's at 09.00 and 21.00. The freq's used are selected according to current ionospheric predictions. Freq's available: GIC24 4025kc, GAY25 5807kc, GIC26 6985kc, GIC27 7397.5kc, GIC29 9350kc, GPB30B 10331.5kc, GPB30 10332.5kc, GKU5 12790kc, GIC33 13555kc, GIC37 17685kc, GIA39 19640kc.

ATA, NEW DELHI, INDIA

Addr: National Physical Laboratory, New Delhi.
Stations: 10000kc 2kW: Mon-Fri 05.30-07.30.

IAM, ROME, ITALY

Addr: Istituto Superiore, Ministero P. T., Rome.
Station: 5000kc 1kW - All days exc. Sun 07.30-08.30.

IBF, TURIN, ITALY

Addr: Istituto Elettrotecnico Nazionale, Corso Massimo d'Azeglio 42, Torino. Te: 688 773 - Station: 5000kc 0.3kW: W 06.50-07.30, 10.50-11.30 - Ann: "Emissioni di frequenze e tempo campioni dall'Istituto Elettrotecnico Nazionale" - V. by letter.

STATION JJY

Addr: Radio Research Laboratories, Koganei, Tokyo, Japan. Te: (04.23)-81-1661 - L.P.: Chief Standard Freq. Section. Y. Saburi - Stations: All 2kW nd, 24 h: 2500kc - 5000kc - 100000kc - 15000kc. All freq's are interrupted at 29-39 min. past each h. Mod. seconds pulses of 8 cycles of 1600c/s, and 1000 c/s tone - Ann: At 34-35 min's & 59-00 min's in each h. Identifying signals are tr. consisting of call sign in morse code (twice), time in JST once in morse code, call sign twice in voice, time in JST once in voice and grade of propagation warning in morse code - V. by QSL-card.

ZLFS, LOWER HUTT, NEW ZEALAND

Addr: Physics & Engineering Laboratory, Lower hutt, New Zealand. Station: 2500kc 0.3kW: CW only Tues 01.00-04.00 - Ann: St. identification is made in morse code at the beginning & end of each tr.

REP. OBSERVATORY SOUTH AFRICA

Addr: Republic Observatory, Johannesburg. Te: 43-2026. Cable: Astronomer - L.P.: J. Hers - Stations: Call ZUO: Olifantsfontein 5000kc 4kW - Johannesburg 10000kc 0.25kW - Johannesburg 100Mc 0.050kW directional. 24 h per day, exc. for interruptions 15 to 25 min. past each h.
Time Signals: Continuous second pulses, consisting of 5c/s of 1000c/s tone. The minute pulse in prolonged to about 1/2 second - Ann: In morse code every 15 min's (just before each quarter hour): ZUO. ZUO, ZUO followed by the Universal time of the next minute - V. by letter will be answered if they are genuine reports.

HBN NEUCHÂTEL OBSERVATORY

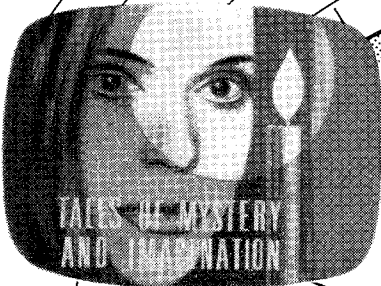

Addr: Neuchâtel, Switzerland. Cable: Observatoire. Te: (038)-5-1238. L.P.: Dir: J. Bonanomi, W. Schuler - On 5000kc all day long: Prgr. of tr: continuous tr. interrupted every 5 min. for 5 min. according to the following schema: 00m 00s - 04m 50s silence, 04m 50s - 05m 00s HBN (A₂), 05m 00s - 10m 00s carrier tr. with seconds pulses, 10m 00s - 14m 50s silence, etc - Within the h, the tr. is the following: Minutes 0-5 silence, 5-10 carrier and seconds pulses, 10-15 silence, 15-20 carrier and seconds pulses, 20-25 silence, 25-30 carrier and seconds pulses, 30-35 silence, 35-40 carrier and seconds, 40-45 silence, 45-50 carrier and seconds, 50-60 silence.

WORLD PUBLICATIONS present

READ: HOW TO LISTEN TO THE WORLD 1965/1966

A great help for the novice, an aid for the veteran, a reference book for the expert. The articles, all written by experts, cover a wide-ranging field. The titles of some of the chapters will certify this: All frequency bands and their use ... The ionosphere conditions, variations and disturbances ... Introduction to World listening ... All the problems connected with Short Wave listening ... and how to overcome them ... The most suitable meter bands ...

How to listen to the amateurs ... to the Satellites ... to the Standard Frequency and Time Signal Broadcasts. How to identify stations ... what to listen for — and how to report to stations ... Transmissions in English hour by hour, directed to the different areas of the World.

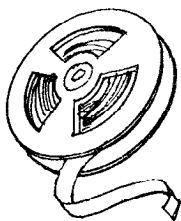

How to build: Antennas and transistorized equipment as Beat Frequency Oscillator, Q-Multiplier, Noise Limiter, Pre-Selector, Antenna Tuning Unit and Crystal Calibrator.

Price: Dkr. 18.75, \$ 2.50, £ 1/0/0, DM 11.50, SKr. 14.00. Postage extra: Dkr. 1.75, \$ 0.25, £ 0/1/9, DM 0.90, SKr. 0.60.

... and LISTEN!

BROADCASTING IDENTIFICATION TAPE

... B.I.T.

More than 60 stations announce themselves and their interval signals on a long play tape of highest quality, composed of original recordings. Plays approx. 1 hour. From Japan to Portugal, from Chicago to New Zealand, languages of the whole World and typical identification signals can now be heard on this unique tape, recorded 2-track monaural at 3 1/4" per sec. (9.5 cm/s) on Mylar (Polyester) base. In your shortwave and DX-hobby, you will be pleased to

have the B.I.T. and also for your family, for the younger generation the B.I.T. will bring an understanding of how high and how versatile the population of this World is. The stations are grouped geographically and alphabetically for quick identification. A printed list of the recorded stations accompanies each tape. Price incl. transport: Dkr. 39.50, \$ 6.00, £ 2/0/0. By airmail extra Dkr. 18.00, \$ 3.00 or £ 1/0/0.

Please write for brochures.

DX-PROGRAMMES

All programmes in English exc. where indicated.

AUSTRALIA: R. Australia: "Australian DX'ers calling" Sat 19.00, 22.00, Sun 05.00, 07.15 (Apr-Oct), 09.00 (Oct-Apr), 13.00, 15.30, Mon 02.15. Japanese: "DX-Time": Sun 10.45. R. St. 3 NE, "World at your fingertips" Sun 12.30.

BULGARIA: R. Sofia: Fri 19.30, 21.30, Sat 00.00, 04.00. German: 1st & 3rd Sun 20.00. French: 1st Sun 21.00. Spanish: 2nd Thurs of the month at 22.30, Fri 00.00.

CANADA: Canadian Broad. Corp.: "R. Canada Shortwave Club": Sat 12.35, 18.35, 21.30, 23.20, Sun 07.50. German: Sun 18.00. French: Sat 19.50, 20.35.

CZECHOSLOVAKIA: R. Praha: "Around the World": 1st and 3rd Mon 19.00, 22.00. For No. America: On alternate Fri 01.00 & 03.30. For Far East & Australia second Fri 07.00. German: 1st Thurs at 19.00. For Austria: Every 3rd Sun at 09.30, repeated following Tues 17.05.

DENMARK: Voice of Denmark: Tues 19.20, 20.35, Wed 02.20, 12.50, Thurs 09.50, 15.20.

FINLAND: Finnish Broadcasting Co: Fri 16.00, 21.00, Sat 12.15.

ECUADOR: The Voice of the Andes: "DX Party Line" 1st and 3rd Mon 02.30, 1st and 3rd Wed 09.30.

GERMANY: Deutsche Welle: 2nd Mon/Tues 09.15, 15.20, 18.30, 19.45, 01.00, 02.30, 04.15, 05.30. Sender Freies Berlin: "Kurzwellenbummel" 2nd Sat 21.25 (prgr. ID), 22.45 (prgr. I) - R. Berlin International: Sat 12.20, 14.20, Sun 07.20. Mon (fortnightly) in all English tr's to Africa. In Swedish: Sat 17.00, 19.45.

HAITI: R. 4 VEH: "DX-Corner" Fri 12.15.

HOLLAND: R. Nederland Wereldomroep: Thurs 07.42, 14.42, 19.42, 20.42, 21.42, Fri 01.42.

HUNGARY: R. Budapest: Tues 19.30, Sun 22.00, 23.30, Wed, Mon 00.30, 03.00.

JAPAN: R. Japan: "DX-News" every 4th Sat/Sun at 10.15, 15.45, 17.55, 19.25, 00.45, 08.15, 13.00, 15.45.

KOREA (Rep): KBS: Last Thurs at 03.15, 05.15, 06.45, 10.45, 15.45, 21.15.

MONACO: Norea Radio via Trans World Radio: "Oss lyttene imelom" in Norwegian every last Fri of the month 17.00 (produced by DX-Listeners Club, Norway).

NEW ZEALAND: R. New Zealand: "Arthur Cushens DX-World": 1st Wed 06.40, 10.30+following Sun 01.00.

POLAND: Polskie Radio: 2nd Fri 18.30 and following Mon 21.30. Swedish: Thurs 17.30, 21.30. Danish: Wed fortnightly 16.30, 19.30.

PORTUGAL: Emissora Nacional: "R. Portugal DX-Club": Every 2nd Fri/Sat 14.00, 18.30, 20.30, 23.00, 02.15, 03.15, 04.00, 07.45 08.30.

RUMANIA: R. Bucharest: Every Wed, Fri 01.30, 03.00, 19.30, 22.30.

SWEDEN: R. Sweden: "Sweden Calling DX'ers" as last part of English tr's: Tues 11.00, 12.30, 14.00, 14.45, 16.15, 19.45, 22.00, 23.30, Wed 01.45, 03.15. Every Wed in German 10.00, 19.15, 21.30, 23.00. Every Tues in French 09.30, 16.15, 17.45, 20.30, 21.45, 23.30.

SWITZERLAND: Swiss Shortwave Service: "Swiss Short-wave Merry-Go-Round": Sat/Sun (in all English tr's) 07.30, 09.19, 12.15, 14.00, 15.15, 16.15, 02.15, 05.19.

USA: R. New York Worldwide: "DX-ing Worldwide": Fri 23.30, Sat 19.00. In Spanish: Thurs 13.45.

ESPERANTO

AUSTRIA: Oesterreicher Rundfunk: Vienna II Tues 16.50-17.00.

BRAZIL: R. Clube Teresina, Teresina: Sun 21.30-21.45 - R. Ministerio da Educacao, Rio de Janeiro: Wed. 17.45-18.00 - R. Roquete Pinto, Rio de Janeiro: Sat 09.45-10.00.

BULGARIA: R. Sofia: Sun 20.05-20.30, 23.30-23.55.

CZECHOSLOVAKIA: R. Prague: Last Thurs 17.50.

GUATEMALA: La Voz de Guatemala: Sat 16.00-16.30.

HOLLAND: Hilversum II: Fri 22.45-22.55, first Mon 22.40-22.55.

ITALY: RAI, Rome: Sun 16.35-16.50.

NEW ZEALAND: R. New Zealand: Thurs 08.30-08.40, 11.30-11.40.

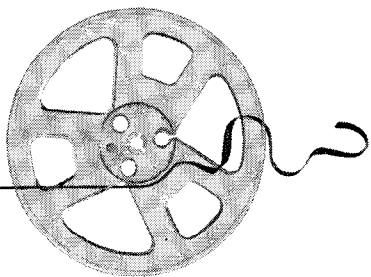

PEOPLES REP. OF CHINA: R. Peking: Sat/Sun 11.00-11.30, 12.30-13.00; Fri/Sun 20.00-20.30.

POLAND: Polskie Radio, Warsaw: D 15.30-16.00. Gdansk: Wed 06.20-06.35.

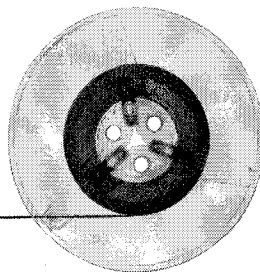

SPAIN: La Voz de Levante, Valencia: Mon 22.45-23.00 - R. Valladolid, Valladolid: Tues 14.45-15.00 - R. Bilbao, Bilbao: Wed 23.30-23.55.

YUGOSLAVIA: R. Beograd & R. Zagreb: Thurs 23.05-23.20.

THE DANISH SHORT WAVE CLUB INTERNATIONAL, P. O. Box 102, Vejlbj-Risskov, Denmark, publishes "SHORTWAVE NEWS" (intern) and "KORTBØLGENT" for Scandinavia (excl. July). Membership fee per year: D.Kr. 18.00, \$ 3.00, £ 0/19/0, 25 IRC; airmail extra \$ 2.25. Payment to C. E. Engelbrechtsen. P. O. Box 102, Vejlbj-Risskov, Denmark.

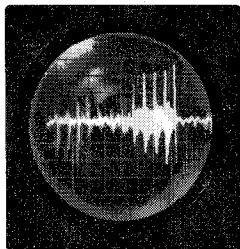

PROBLEM: SLOW THREADING

SOLUTION: THIS NEW 3M SELF-THREADING TAPE REEL

Simply lay tape inside reel and start recorder. Reel threads itself automatically. No hooks, no slots. Solid sides protect tape against damage. "Scotch" Brand 7" Self-Threading Reel has a snap-tight plastic cover for dust-proof storing without a box.

PROBLEM: TOO MUCH NOISE

SOLUTION: NEW 3M LOW NOISE RECORDING TAPES

New "Scotch" Brand Tapes (available in both acetate and polyester) increase signal-to-noise ratio 3db to 6db over conventional tapes. Improve high frequency response. Wear 15 times longer. Save tape because they operate at half your normal recording speed with no loss in fidelity.

Scotch® BRAND TAPES AND REELS are among scores of 3M audio-video advances. More information? Write: 3M, Minnesota Mining & Manufacturing Co., International Division, Box 3800, St. Paul 1, Minnesota, U.S.A. Dept. WRT

Toshiba BROADCASTING EQUIPMENT

engineered for size reduction and high performance

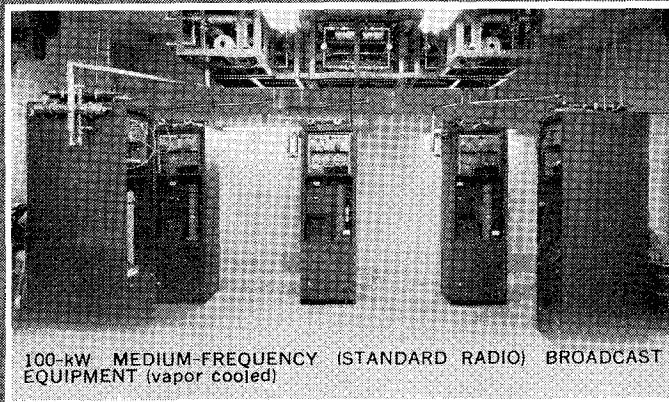

SEPARATE-LUMINANCE TWO-IMAGE-ORTHICON COLOR CAMERA

This all-transistorized luminance-tube chrominance-tube camera, using a striped four-color filter for the chrominance orthicon, amply proved its efficacy and utility in the color televising of the 1964 Olympic Games in Tokyo.

UHF SATELLITE BROADCAST EQUIPMENT
(100-watt video and 25-watt audio output)

With but one powerful traveling-wave tube in the output stage to take place of several cavity resonance output stages of conventional UHF transmitters, this Toshiba equipment substantially reduces the size of TV satellite stations to be spotted in hard-to-receive areas.

100-kw MEDIUM-FREQUENCY (STANDARD RADIO) BROADCAST EQUIPMENT (vapor cooled)

The vapor cooling system of this medium-frequency transmitter eliminates many accessories, including blowers, pumps and the like used in conventional cooling systems and does away with the noise coming from these accessories, resulting in a compact and quiet transmitter installation.

Tokyo Shibaura Electric Co., Ltd.

TELESCO INTERNATIONAL CORPORATION

for broadcast equipment

CCA ELECTRONICS CORPORATION

AM and FM broadcast transmitters, antenna couplers, modulation and frequency monitors, AGC and limiting amplifiers, remote control for transmitters.

SARKES TARZIAN INCORPORATED

Television studio and transmitting equipment including live and film camera chains optical multiplexers, slide projectors, sync generators, video switching systems including vertical interval type, studio automation systems, VHF - TV transmitters, microwave links and other items.

FAIRCHILD RECORDING EQUIPMENT CORPORATION

Monaural and stereo disk cutting systems including lathes, cutting heads, amplifiers; limiter, compressor, and power amplifiers; modular solid state amplifiers, preamplifiers, limiters, compressors, attenuators; integrated solid state speech input consoles; transcription turntables; reverberation generators.

ELECTRO-VOICE INCORPORATED

Broadcast and general purpose microphones, speakers and speaker systems.

CAPPS AND COMPANY INCORPORATED

Recording styli including heated types, condenser microphones.

CROWN INTERNATIONAL

Professional reel type magnetic tape recorders and reproducers, tape duplicator systems.

ROBINS INDUSTRIES CORPORATION

Tape splicers, tape erasers, phonograph and tape accessories.

ANTENNA PRODUCTS CO.

High frequency log periodic transmitting antennas of all types including fixed station and transportable, also rotatable types; conical monopole broadband vertical omnidirectional antennas, antenna support towers.

DISAN ENGINEERING CORPORATION

Portable and mobile VHF - FM program quality remote pickup links, UHF-FM multi-channel program quality STL with optional facilities for remote control and remote logging, FM background music receivers including multiplex types.

TELESCO ALSO SUPPLIES

All necessary additional items such as: TV and FM antennas, transmission line, TV translators, etc.

TELESCO serves as world-wide sales representatives for leading manufacturers of radio and television broadcasting equipment. For technical and descriptive information concerning any of the products listed, contact TELESCO

 Radioélectriques et Téléphoniques, Paris.

Special Abbreviations for Shortwave Listeners:
 Q-Codes: The following "Q" Codes, devised at the Cairo Convention
 of 1938, are used among shortwave enthusiasts listening to broad-
 casting stations (socalled DXers): QRG = Frequency; QRK =
 Readability; QRM = Interference (from other transmitters); QRN =
 Atmospheric interference (static); QRT = Close down; QSA = Signal
 strength; QSB = Fading; QSL = Verification (of reception); QTH =
 Location.

The following abbreviations are generally used in club publications:
 BC = broadcast; BCB = Broadcast band, i.e. medium wave band;
 CW = Continuous Wave, i.e. morse code; HF = High Frequency;
 ID = Station Identification; IRC = International Reply Coupon;
 LA = Latin America; mx = music; nx = news; OM = Old Man, a
 general term of greeting; rx = Receiver; SSB = Single Side Band;
 SWL = Shortwave Listeners; Tx = Thanks; tr = Transmitter; 73's =
 Best Wishes.

SVERIGES RADIOKLUBB is the oldest DX-club
 in Sweden. We are publishers of "DX-RADIO",
 a printed bulletin mainly in Swedish language,
 appearing 11 times a year and featuring among
 others a complete list of SW-stations with a
 unique time-schedule arrangement. The service
 to our members includes our famous printed
 reception report forms in English-Spanish and
 French-Portuguese as well as a long range of
 other useful DX-requirements. Annual dues are
 Sw.Crs. 13.50 (US \$ 2.60/- 0/18/6). Write to

The band selections have been made on the basis of both propagation conditions and the operating schedules of broadcasting stations.

A dash in the band column indicates reception is not expected due to difficult propagation conditions.

A number preceded by an asterisk indicates the most suitable band propagationally but transmitters not normally in operation.

I would appreciate comments on differences noted between these predictions and actual experience during 1966.

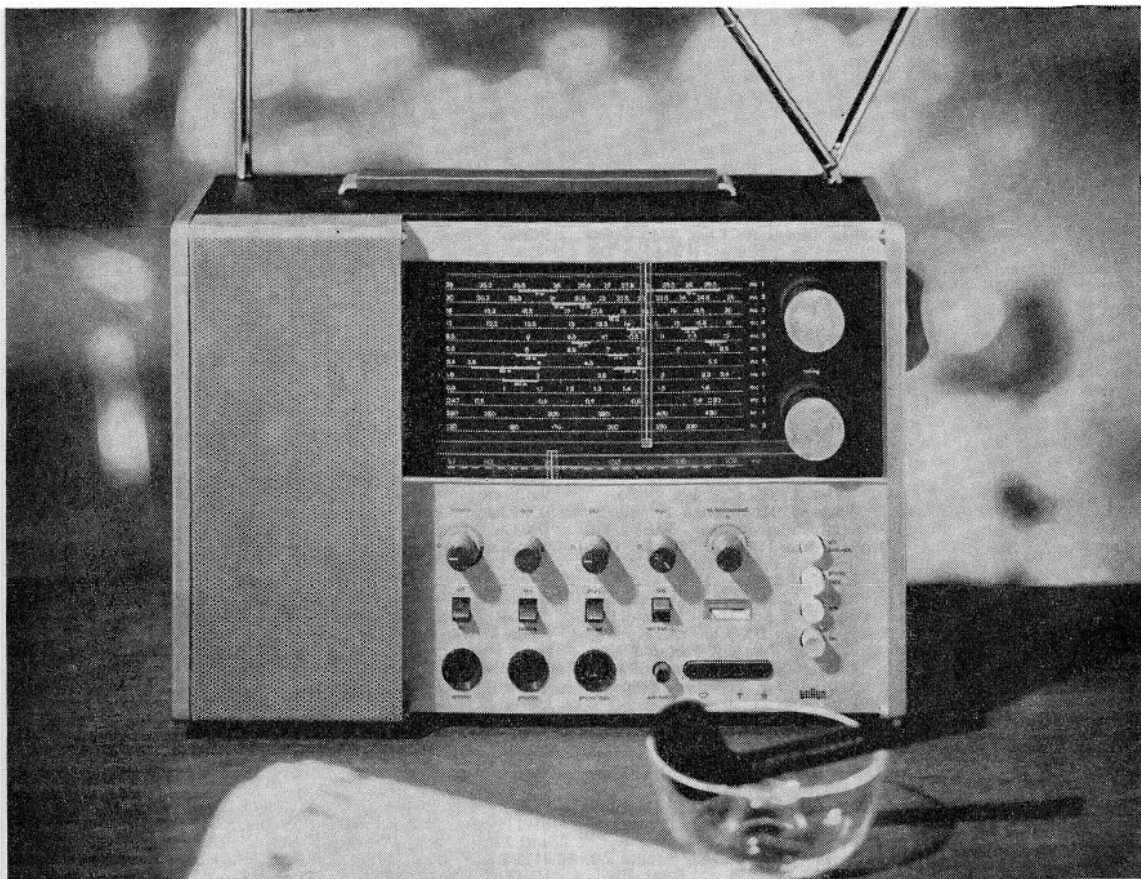

CALL SIGN ALLOCATIONS (by alphabetical order of call signs)

The first character or the first two characters of a call sign indicates the nationality of the station using it.

BRAUN

Universal All Band Radio

The T1000 is a universal radio and heterodyne receiver. Its 13 wave bands cover nearly all frequencies currently used for broadcasting throughout the world: Commercial and amateur, citizens bands and telegraphy, maritime and aeronautical broadcasts.

On FM the sensitivity, selectivity, and noise suppression factors of the T1000 were pushed to the highest limits.

The short wave section is particularly well developed. Spread over eight bands, it permits the entire short-wave range from 1.6 to

30 mc to be received. Large, easy-to-read dials provide easy tuning. The instrument's bandspread affords precise station selection. A drum-type band selector with high repeat-exactness permits even weak stations to be quickly retuned.

The instrument's input sensitivity reaches or surpasses that of commercial receivers. Automatic volume control (AVC) works on three stages. It is defeatable for direction finding purposes. In this case the desired sensitivity may be set manually.

T1000

The T1000's selectivity is outstanding, its image rejection excellent. Broad or narrow bandwidth are switch selected. A beat frequency oscillator permits heterodyne reception.

The instrument operates on built-in mono cells (plus a separate one for the dial lighting), on a power pack of 6, 12, or 24 volts DC, or on 110/220 volts AC.

EVERYTHING FROM CAMERA TO AERIAL

EMI plans, produces and installs complete television systems ... everything from camera to aerial and because EMI is an international organisation this equipment and service is available anywhere in the world.

Recent introductions to the EMI range are two SOLID STATE TV CAMERAS; the Type 206 4½ inch Image Orthicon Camera which has full facilities for studio or outside broadcast use and the EMI Type 208 Plumbicon/Vidicon Camera, a compact high quality channel which features variable aperture correction and switched gamma correction. It is available with servo controlled zoom lens.

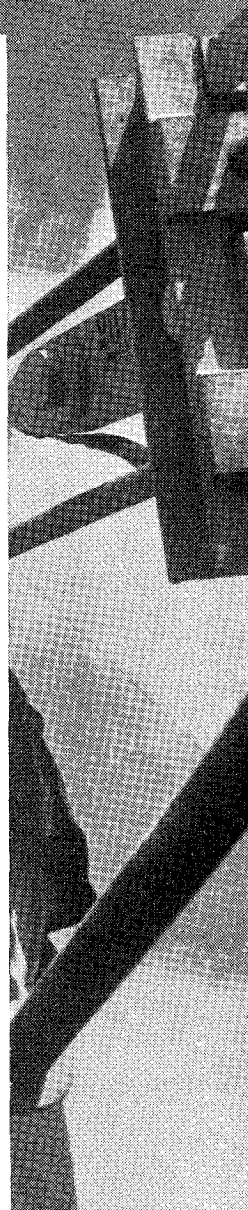

Other recent developments are two exciting new tape recorders - the BTR4 designed to the highest professional standards for use up to 20 Kc/s; NAB, cine or 11¼ inch spools; full track, half track or twin track stereo, and the L4 portable which gives professional quality recordings anywhere, anytime. The L4 has transistor circuits throughout and weighs only 10¾ lbs. complete with rechargeable batteries.

Further information on EMI Broadcast and Recording equipment will gladly be provided on request.

SYSTEMS ENGINEERING

BROADCAST & TELECOMMUNICATIONS

Tele-Projects Incorporated provides a complete service, available for your entire project or any portion that you may require.

The service includes the following:

- **ECONOMIC STUDIES**
- **SYSTEM DESIGN**
- **ANTENNA DESIGN**
- **ROUTE SURVEYS**
- **PROPAGATION TESTS**
- **SPECIFICATIONS**
- **INSTALLATION**
- **TRAINING**
- **CONSULTING**

Tele-Projects Incorporated's staff of experienced engineers stands ready to serve you in any of the following fields:

**TELECOMMUNICATIONS
BROADCAST
TELEVISION**

We specialize in broadcasting systems designed for high power transmitter installations, the provision of special HF antennas and antenna switching systems. FM broadcast transmitters incorporating the rigid requirements for stereo and multiplexing. Special FM antennas providing extended coverage.

This diversified experience enables us to tackle any job with certainty, efficiency and provide our customer with an economical system which will conform to his specific requirements.

THIS BOOM MICROPHONE IGNORES EVERYTHING ...EXCEPT THE DIALOGUE

Consistency of sound track quality on an endless variety of locations and sets can be dramatically improved with the remarkable Shure SM5 Boom Microphone. It "hears" the dialogue rather than the ever-changing character of the surroundings.

Because its cardioid directional pattern is uniquely uniform with frequency and symmetrical about its axis, the SM5 is singularly independent of the effects of environment. Even in extreme shooting situations (such as with tight sets, low ceilings, hard walls, low microphone angles, traffic or air conditioner noise and rumble, and changing distance) the SM5 minimizes sound coloration and ambient noise pickup. Equalization

changes—on the set or in transfer—are seldom, if ever, necessary.

The highly effective attached windscreen completely encloses the two-stage mechanical filter, so that there are no external "rubber bands" for the wind to "strum." The absence of response-correcting inductors or impedance transformers assures freedom from hum.

Call on the Shure SM5 to solve your most annoying boom problems!

For additional information, write directly to Mr. Robert Carr, Manager of Professional Products Division, Shure Brothers, Inc., 222 Hartrey Ave., Evanston, Illinois.

SHURE SM5

UNIDIRECTIONAL DYNAMIC BOOM MICROPHONE

SHURE PROFESSIONAL MICROPHONES... FOR BETTER AUDIO

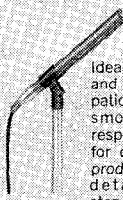

MODEL SM56
CARDIOID
DYNAMIC

Extremely versatile in studio, control room, and remote use. Also widely acclaimed for rhythm recording. Bright, clean sound. Exceptionally uniform cardioid pattern gives optimum control of environment.

MODEL SM33
UNIDIRECTIONAL
RIBBON

Warm, smooth sound for studio, control room, and scoring stage. Super-cardioid directional pattern. Compact, yet rugged.

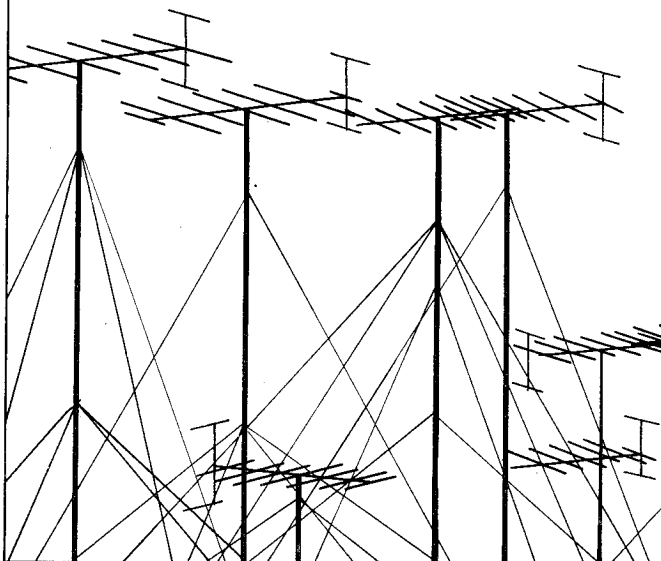

MODEL SM76
¾" OMNIDIRECTIONAL
DYNAMIC

Ideal for interviews and audience participation, yet unusually smooth wide range response (40-20,000 KC) for critical music reproduction. Instantly detachable from stand. Steel case with Cannon connector.

MODEL SM50
OMNIDIRECTIONAL
DYNAMIC

Self-windscreened and pop-free for news, sports, remotes, and interviews. Also ideal for many studio and control room applications. Comfortably balanced for hand or stand use. Natural response.

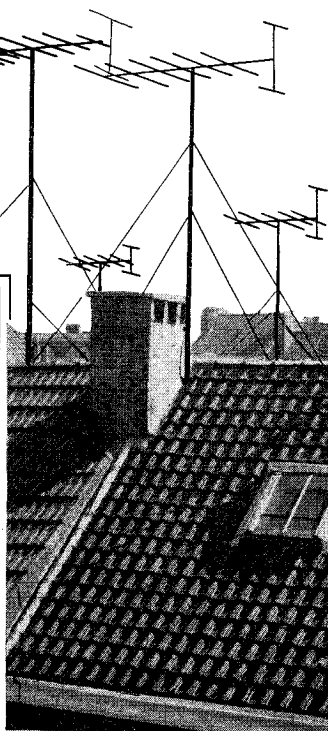

A TELEVISION COPY ...

is not an ordinary release print. In comparison to an ordinary release print, a T.V. copy should :

- have a lower gamma value (approx. 1.75),
- be perforated in accordance with exacting demands,
- have a finer grain for the sharpest details.

Furthermore, it should also be possible to process a T.V. copy together with ordinary positive films. Gevaprint film for T.V. - type 5.64 meets all these requirements.

AGFA-GEVAERT

GEVAPRINT FILM FOR T. V.

TAPE CARTRIDGE SYSTEMS

RE-BROADCAST RECEIVER

by

McMartin

manufacturer of over
90% of all rebroadcast
receivers and monitors
in use throughout the
world.

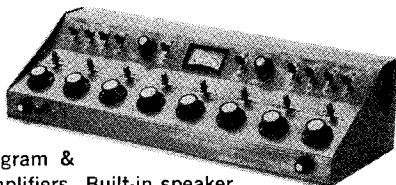

NO. AS-100B STEREO STUDIO CONSOLE

All-transistorized. Four stereo/mono inputs. Extremely versatile for main studio, production studio, and remote amplifier. Cueing, muting, monitor and cue level controls. Balanced inputs and outputs. Headphone jack and gain control. Plug-in microphone pre-amps and program amplifiers.

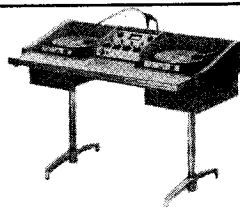

NO. A-20B MONAURAL STUDIO CONSOLE

Professional type studio console. Completely transistorized modular design. 16 audio inputs; 8 mixing positions. Master controls. Cueing monitor. Balanced input. Output: ± 8 dbm 600 ohms balanced. Program & monitoring channels, including monitor amplifiers. Built-in speaker.

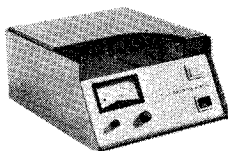

NO. A-500 MONAURAL* STUDIO CONTROL & REMOTE UNIT

Complete professional production studio, main studio, or remote studio at a fraction of the cost you would expect. Consists of Audio Console (available separately)—two heavy duty professional turntables, broadcast quality viscose-dampened tone arms. Legs removable. *Can also be supplied in stereo version

SPARTA-MATIC® 800 SERIES TAPE CARTRIDGE SYSTEM

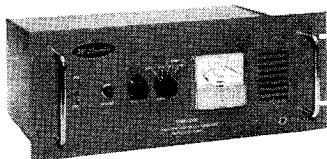

All-transistor, modular construction. Compact table-top operation. NAB approved standards. Hinged-top lid allows rapid accessibility to transport adjustments and electronics. Whisper-quiet action. Remote start, stop and record. Heavy-duty synchronous motor. New "micro-adjusting" head mount, for fast, easy, head alignment.

800-RP Record/Playback

800-P Playback

NO. TBM-1000 RE-BROADCAST RECEIVER

Built for reliability, performance and economy, for all rebroadcast and monitoring applications.

- 600 ohm program amplifier with output level control—distortion less than 1% at +10 dbm
- Sensitivity 1.0 microvolt for 30 db quieting
- Separate monitor amplifier, self-contained speaker and phone jack (for external speaker or earphone)

Products shown above are just a few examples of what SINGER has to offer.

**Improve
your image the
proven way**

with General Electric color and monochrome cameras

From General Electric's complete line of television cameras you will find the model that will add just the right clarity to both your station image and your viewer's reception.

G.E.'s new monochrome cameras produce a high-quality image with a full gray scale. G-E color-camera performance is equally dramatic—consistently sharp, true and clear, with excellent color registration and unmatched stability.

All G-E camera systems are the result of pio-

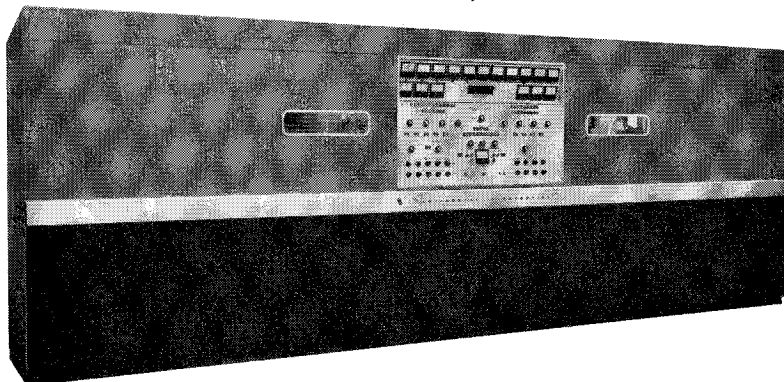

neering research in solid-state circuitry that has led to increased reliability, optimum performance and greater economy in station after station, all over the world.

For details on G-E user-proven cameras or any other part of G.E.'s complete television package—studio equipment, transmitters, antennas—contact your General Electric representative. *General Electric Company, Dept. 43-10, 159 Madison Ave., New York, N.Y. 10016, U.S.A.*

Continental Short Wave Broadcast Transmitters Set New Standards of Efficiency and Performance!

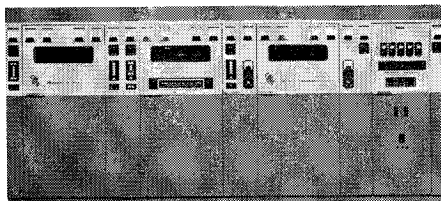

TYPE 419B 250 KW HF BROADCAST TRANSMITTER

- RF system can be operated as FSK communications transmitter independently of modulator
- Frequency range: 4 to 26 megacycles
- 20 second tuning of 10 pre-set frequencies
- High-level plate modulation
- Two parallel-connected power amplifier tubes
- Power supplies use solid state rectifiers
- Utilizes vapor phase cooling
- Capable of 100% trapezoidal modulation

TYPE 418A 100 KW HF BROADCAST TRANSMITTER

- RF system can be operated as FSK communications transmitter independently of modulator
- Frequency range: 3 to 30 megacycles
- High-level plate modulation
- One power amplifier tube
- Power supplies use solid state rectifiers
- Utilizes vapor phase cooling
- Capable of 100% trapezoidal modulation

TYPE 417B 50 KW HF BROADCAST TRANSMITTER

- RF system can be operated as FSK communications transmitter independently of modulator
- Frequency range: 3 to 30 megacycles
- High-level plate modulation
- One power amplifier tube
- Power supplies use solid state rectifiers
- Air cooled
- Can be supplied capable of 100% trapezoidal modulation

For additional information and specifications, write: Department 64, Continental Electronics Manufacturing Co., P. O. Box 17040, Dallas, Texas 75217.

SS-IBS

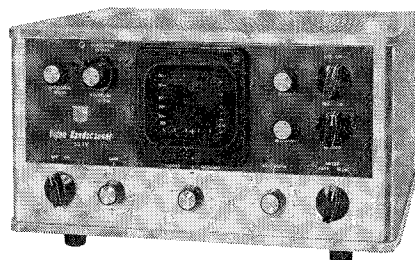

High Performance Communications Receiver explicitly designed for operation on the International Broadcast Bands

The SS-IBS International Broadcast Receiver is a completely new high performance communications receiver explicitly designed for use on the high frequency broadcast bands between 3.5 and 26.1 megacycles. The SS-IBS receiver is *unique* in its ability to receive weak signals located only a few kilocycles away from powerful broadcasts. The SS-IBS features unusual simplicity of operation, allowing relatively unskilled individuals to achieve results of professional quality; yet it provides performance characteristics and operating controls which will improve reception at the hand of an experienced operator. SS-IBS may be used with accessory speaker or headphones for monitoring and has suitable output connection for recording, direct rebroadcast, and visual band monitoring with the SS-IV Video Bandscanner. The SS-IBS is designed for use with an optional noise silencer (SS-IS) of extreme effectiveness on impulse noise.

SPECIAL FEATURES: Extreme Freedom from Cross Modulation and Overload • Unusual Frequency Precision with Digital Readout in Kilocycles • Rapid and Exact Tuning Mechanism with Motor Drive for Fast Traverse • 8.0, 5.0 and 2.5 kc. Selectivity with Sharp Crystal Lattice Filter • Choice of AM, USB, LSB or CW Modes • Provision for Exalted Carrier Reception

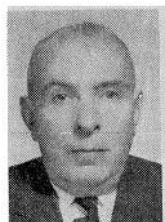

SS-IV, Video Bandscanner. This unique oscilloscope display unit, when used with the SS-IBS, shows all signals in the band in use, or any portion of the band can be expanded to full screen for detailed examination. Both linear and logarithmic displays are provided. A marker pip constantly shows the exact frequency to which the receiver is tuned. The sharp resolution of this unit permits observation and measurement of two AM sidebands displaced only 2.5 kc. from the carrier. Provision is made for transmitter monitor or analysis.

EPI: Emetteur Protestant International (international evangelical radio station) P.O. Box 1374 - 3000 Berne, Switzerland. Planned: 1 sw.st. with 2 x 250kW tr's with prgr's in English, French, German, Spanish, Portuguese, Scandinavian & Dutch. Pub: EPI News Bulletin (Quarterly) in 7 languages.

Standard Freq. & Time Signal Stations

Continued from page 64.

R. STATION WWV, WWVH, WWVB and WWVL (Gov.) St. WWV, Greenbelt, Maryland, USA: Eng-in-Charge. L. Honea. St. WWVH, Box 578, Puunene, Maui, Hawaii: Eng-in-Charge. S. Katarahara. WWVB/WWVL, Box 83-E, Route 2, Ft. Collins, Colo, USA: Eng-in-Charge. R. F. Carle - L.P: Chief Freq. and Time Broadc. Sec's. D. H. Andrews, National Bureau of Standards, Boulder, Colo, USA.

Standard Radio Frequencies:

WWV 2500kc 1kW, 5000kc 8kW, 10000kc 9kW, 15000kc 9kW, 20000kc 1kW, 25000kc 0.1kW: The broadc. are continuous, night and day, exc. from 45 min. to 49 min past each h - WWVH 2500kc 1kW, 5000kc 2kW, 10000kc 2kW, 15000kc 2kW: Continuous exc. from 15 min. to 19 min. past each h - WWVB 60kc 13kW Continuous - WWVL 20kc 1.8kW Continuous, except to permit exp. changes.

Program:

WWV transmits radio propagation forecasts in International Morse Code every 5 min's just preceding the voice ann's; the IUWDS "Geolert!" is broadc. in International Morse Code each h from WWV during the 19th min. and from WWVH during the 49th min. Universal Time is ann. from both st's in Intern. Morse Code each 5 min. At WWV a voice ann. of Eastern Standard Time is given each 5 min. as follows: "National Bureau of Standards, WWV, when the tone returns Eastern Standard Time will be... hours, ... minutes". At WWVH a voice ann. of Hawaiian Standard Time is given each 5 min's as follows: "National Bureau of Standards, WWVH, when the tone returns Hawaiian Standard Time will be... hours, ... minutes". WWVB transmits a special time code consisting of 10db carrier reductions each second for 0.2, 0.5 or 0.8 sec (Format on request). Transmitted phase will be advanced 45° for 5 min. each h between 10 min and 15 min after the h. No special identification will be given. WWVL identifies by keyed carrier given the call sign in Intern. Morse Code on the h and every 20 min. thereafter. Immediately following identification, the freq offset (parts in 10⁹) is given in Intern. Morse Code by keying the carrier, the word "minus" indicating the minus sign - V. by QSL-card or letter. Pub: Prgr. sched. on request.

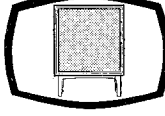

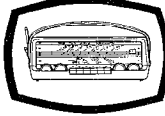

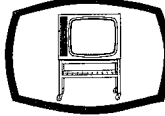

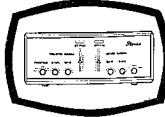

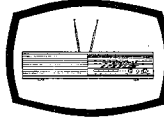

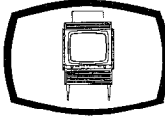

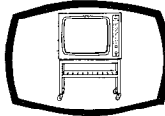

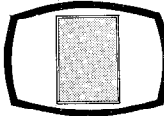

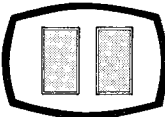

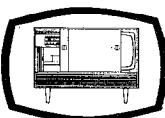

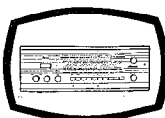

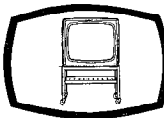

In addition to the 20kc carrier other exp. freq's near 20kc may be transmitted alternately or simultaneously.

Every month first-hand information on the world of broadcasting is offered to you in the

EBU REVIEW

Published in English and French by the European Broadcasting Union

Part A — Technical will keep you informed of all new technical developments in sound and television broadcasting.

- Articles written by specialists describe typical new installations, new operational methods and research work undertaken by the broadcasting organizations.
- The "International News" section is devoted to news items reported by EBU Members concerning the installation and operation of transmitting stations and studio centres, recording equipment and outside broadcast facilities, both for sound and for television.
- Each number gives a summary of the changes that have taken place during the previous two months in the spectra of the long, medium and metric (FM) sound broadcasting wavebands and of the television wavebands.

Part B — General and Legal — brings you authoritative reports on radio and television developments throughout the world in the non-technical fields. Specialists write on the latest trends in

programming, administration, and planning,

progress and activities are reported from the international sphere, and from broadcasting organizations in over 50 countries

experts analyse legislation and jurisprudence touching on broadcasting, new Copyright Acts, etc.,

special numbers are published on key subjects, including educational broadcasting, television graphics, agricultural broadcasting, Eurovision.

ANNUAL SUBSCRIPTION

Part A (six numbers): 230 Belgian francs. Publishers: EBU Technical Centre, 32 Avenue Albert Lancaster, Brussels, Belgium.

Part B (six numbers): 20 Swiss francs. Publishers: EBU Administrative Office, 1 rue de Varembe, 1200 Geneva, Switzerland.

A combined subscription to Parts A and B (12 numbers) may be ordered either from Brussels or Geneva (price 420 Belgian francs or 36 Swiss francs).

the second Fri at 07.00. **English** (to Europe): Every first and third Mon at 19.00 and repeated at 22.00 — **German**: Every first Thurs 19.00. For Austria: Every third Sun at 09.30 repeated following Tues 17.05.

Finnish Broadcasting Company 40 years old

Finland, one of the world's most northerly countries, is rather sparsely inhabited. It covers 337,009 sq. km., but the population is only 4,610,740. A cold climate and long, dark wintry nights force people to stay indoors more than in countries farther south. Such conditions have favoured the development of radio and television. These two media alone have reduced the feeling of isolation and made distance meaningless. So there is a radio in every Finnish home. The percentage of portable and car radios is growing rapidly; the same goes for television sets, which now number about 750,000.

When the Finnish Broadcasting Company this year celebrates 40 years of regular service, sound radio offers listeners two programmes which can be heard all over the country and yet a third for the Swedish speaking population living on the south and west coasts. There is also a television programme which the whole country, apart from northernmost Lapland, is able to watch. The south of Finland is also able to watch a second television channel.

Listen to Finland on Mondays and Fridays at 16.00 GMT, or, if you live in the United States, on Tuesdays and Saturdays. For further details see page 102.

LOWEST AIR FARES BETWEEN EUROPE AND U.S.A.

FROM ALL THESE CITIES

Now is the time to take advantage of Icelandic's incredibly low Thrift Season fares. Lowest of any scheduled airline at anytime of the year . . . one way or all-year round trips. Pay far less than Jet Economy fares. New faster service, too! Swift, new Rolls-Royce 400 Jet Props are in full service from Luxembourg to Iceland and New York. Service from other Icelandic terminals is via long-range DC-6Bs to Iceland—connecting with Rolls-Royce 400 Jet Props to New York. Complimentary meals, drinks, snacks. There is no doubt about it . . . Icelandic is your best sky-buy to the U.S.A.

Advertisement

telecommunication journal

In the increasingly international age in which we live, it is more important than ever that everyone connected with radio should be in touch with authoritative world opinion on radio matters.

The Telecommunication Journal, the official organ of the International Telecommunication Union (ITU), serves just this purpose. Since 1869 (when it first appeared as the "Journal Télégraphique") it has faithfully covered all aspects of telecommunications which come within the purview of the world organization (now a UN specialized agency) set up in 1865 to regulate them.

The journal contains

- a news section covering the activities of the ITU, of its Member Administrations and of private operating companies and highlighting technical advances in radio throughout the world -
- articles by world experts, with a heavy emphasis recently on the latest developments in space communications -
- a comprehensive list of articles of telecommunication interest appearing in the scientific press throughout the world -
- official ITU information, including lists of forthcoming ITU Conferences and other international telecommunication meetings -
- monthly sunspot predictions.

It is published monthly by the ITU in separate English, French and Spanish editions.

It costs 2 Swiss francs a copy. The annual subscription is 20 francs for one language edition, 30 francs for two and 40 francs for three.

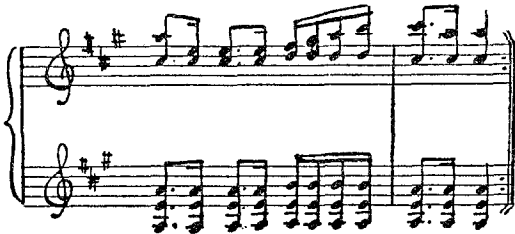

For further information, write to: Telecommunication Journal, ITU, Place des Nations, Geneva, Switzerland.

DIPLOMA

Do you want to have this beautiful diploma to hang on the wall above your radioreceiver ?

We are pleased to announce that Radio Bucharest will be awarding 1,000 diplomas, numbered from 1 - 1,000, to the first thousand of our listeners who will send us 12 reception reports, within 3 months. These reports should be numbered from 1 to 12 and marked "for the diploma". At the same time, we should like to let you know that our special broadcast for radioamateurs is on the air every Wednesday and Friday during our transmission at 1,30 GMT, that is 20.30 EST and 3 GMT that is 22 EST for North America and at 19.30 GMT and 22.30 GMT for Europe .

Broadcasting House in Moscow

THIS IS RADIO MOSCOW!

RADIO MOSCOW can be heard abroad in 54 foreign languages and 10 languages of the USSR on both short and medium waves. All continents are covered.

For the Soviet point of view on foreign affairs and firsthand information on life in the Soviet Union, tune in to RADIO MOSCOW.

Besides the news, reviews of the Soviet press, talks and interviews, Radio Moscow's external services carry special programmes for women and youth, features on science and engineering, sports and literature. No less popular is music from Moscow.

RADIO MOSCOW regularly broadcasts the youth programmes.

RADIO MOSCOW has as its guest speakers top Soviet politicians, public leaders, scientists and artists, as well as visitors from abroad.

Listeners' letters are answered both on the air and by mail. Request music programmes are featured regularly and quizzes with prizes for listeners are popular.

TUNE IN TO RADIO MOSCOW!

ADDRESS: RADIO MOSCOW, MOSCOW, USSR

The **World Radio TV Handbook** is the only international handbook of its kind.

World Radio TV Handbook is used by the managing directors and engineering staffs of radio and television stations. Equipment manufacturers looking for world markets are thus presented with an ideal medium for reaching all their potential customers in this fast growing field.

These facts give authority and weight to a sales message in the **World Radio TV Handbook**. It will help increase your sales because it will reach the technical staffs of radio and television stations, institutions, organizations, amateurs and short wave listeners.

pines, Ryukyu Islands.**ANNOUNCEMENT:**Each prgr. ends with these words spoken in English: "This program
has come to you from the United States of America". The station
identification is then announced in English.**INTERVAL SIGNAL:**20 second variations on the theme of "Columbia, the Gem of the
Ocean". This musical symbol is played at the beginning of a transmis-
sion, during station breaks, and at the conclusion of a transmission.

VERIFICATION by QSL-card. No return postage required.

ARMED FORCES RADIO AND TELEVISION SERVICE

ADDR: Hqs: Directorate of Armed Forces Information and Education, Washington D.C. 20305.

This office exercises over-all policy control of the Armed Forces Radio and Television Service. The mission of AFRTS is to keep U.S. Service men and women stationed outside the States the best informed service personnel in the world on current events. All broadcasts are in English. News, sports and other timely matter is beamed overseas directly by ten powerful tr. on the U.S. Atlantic and Pacific coasts. These s.w. broadcasts serve the overseas radio stations, which rel. them locally. Prgrs. other than news and locally produced prgrs. are derived directly from the U.S. Commercial radio and tv. networks. N. is compiled from the wires of A.P. and U.P.I. and include voice actuality and "from the scene" report segments. Regular shortwave prgr's are presented daily from both Los Angeles and New York City. The operational headquarters of AFRTS, at Los Angeles, ships undated radio and tv. prgrs. on transcription and film, respectively, to overseas stations, and controls the Pacific Shortwave Service.

PACIFIC SERVICE (from Los Angeles):

ADDR: AFRTS Shortwave 1016 No. McCadden Place, Los Angeles, Calif. 90038. Te: Hollywood 23301 - L.P.: Officer-in-charge: Col Robert R. Eby, USAF.

D.PRGR'S: 21.30-16.30.

PROGRAM **NEWS** JULY TO NOV. 1966

STATION CALL: WRUL

STATION CALL: WRUL
WORLDWIDE COMMUNICATION CENTER • 4 WEST 58th STREET • NEW YORK 19, N.Y., U.S.A.

Live Amex reports on; New stock list ready

Following the success of daily live reports from the New York Stock Exchange by Flora Griffin (see photo below) and Dorothy Higgins, Radio New York Worldwide has recently arranged for similar live pickups direct from the American Stock Exchange (Amex), four times each trading day. . . . BNYW has added a spe-

In addition, RNYW has added a special daily business analysis at 2050 GMT with Professor Myron J. Spencer, director of the Graduate School of Business Administration, Northeastern University.

Also effective with the publication of this schedule, Radio New York Worldwide has begun broadcast of the new list of stocks on the "Worldwide Investor's Digest" based on 22,046 votes cast by listeners for individual issues. Copies of the list may be obtained by writing Radio New York Worldwide, New York 19, New York, U.S.A. The Worldwide Investors Digest is presented 3 times weekly by the brokerage firm of Merrill Lynch, Pierce, Fenner and Smith.

"THE PERSONALITY CULT" — left to right Hill Edell, John Anthony Zee, Les Marshak, Kelly Fitzpatrick and Andre Mostert — individual approaches to the Worldwide Hit Parade, heard daily at 1600 GMT.

**Radio New York Worldwide
Expands 'Pop' coverage**

In a mood designed to give greater variety and more time to popular American music (as well as the many fine imports now heading the lists in American Radio New York has produced major changes in its popular music program schedule. Most important changes is the

Hill Edell, Radio New York's veteran music master, now adds a new program to his popular "Command Performance" daily at 1730 GMT. For late evening listeners in Europe and supertime folk in the Caribbean, "Hill's Place" features a potpourri of good music and personality interviews daily at 2200 GMT.

Flora Griffin, one of the voices of the New York Stock Exchange, at her Gallery post.

RADIO NEW YORK WORLDWIDE

Worldwide Communications Center

4 West 58th Street New York N.Y. 10019, U.S.A.

Some Exciting and Important Radio New York Worldwide programs

ENGLISH

Breakfast in New York: The excitement of New York at the start of a new day as reflected by its music and conversation. John Anthony Zee conducts this daily feature, beginning at 1200 GMT.

Chronoscope: A full 35-minutes of news and comment, including news by continent with special reports for Asia, Europe, Africa and the Americas; direct broadcasts from the New York Exchange, featuring latest financial news; sports and background to the news; presented six times daily.

The Worldwide Hit Parade: Radio New York Worldwide's most popular program, featuring five full hours of the hits of today and tomorrow in the pop field, jazz, and country music. Albums and singles will be featured at 1600 GMT, Monday through Friday.

This World We Live In: With Hill Edell. The variety program with exciting conversation, music, and the popular feature "Listener's Request", beginning at 1730 GMT, Monday through Friday.

Special Programs: Radio New York Worldwide has a variety of exciting special programs every week, including interviews with famous people. Check your programs like "Report From New York", "Mel In Manhattan", "Book World", "Travel Worldwide", "Great Moments In History", "Commerce Worldwide", and "The Barry Farber Show".

The Sounds of New York: Weekly review of the exciting sounds and people that make news and music in the great metropolis.

SPANISH

Prisma Continental: The nightly feature of late news, and direct reports, from spanish speaking correspondents around the world.

Radar: A daily variety program beginning at 2200 GMT, including interviews, comments, sports results, late news, and, most of all, the best in popular music.

Clave: A fast moving program of great variety, featuring a pot-pourri of the best of Radio New York Worldwide program features.

Always . . .

in English or Spanish, complete coverage in depth of the major news and sports events of our time . . . on Radio New York Worldwide. See complete station listing on page 209.

EDUCATIONAL

Department of Health, Education, and Welfare, Office of Education, Washington D.C. 20202; Office of the Under Secretary: I. A. Nestingen. The Educational Television Facilities Programme designed to encourage establishment of new and improved broadcast facilities through financial grants based on matching funds.

Office of Education, Media Research and Dissemination Branch, Ag. Dir: Th. D. Clemens. Educ. Media Specialist: Mrs. G. Broderick. Provides a variety of services by professional staff specialists to schools and college officials, st. operators, and others, as requested. Under Title VII of the National Defense Education Act, finances research and experimentation in the educ. uses of all media; disseminates information on the subject through conferences, seminars, workshops, and publication of pertinent bulletins.

Organisations:

National Association of Educational Broadcasters (NAEB).

Headquarters: 1346 Connecticut Ave, N.W. Washington D.C. 20036. Te: 667-6000 - Publications and Network Office: 119 Gregory Hall, Urbana, Illinois 61803. Te: 333-0580.

L.P.: Pres: W. G. Harley. Vice-Pres: H. E. Hill. Ag. Pres. (TV): C. Scott Fletcher. Vice Pres. (TV): G. L. Appy.

Stations: 157 educational institutions and organizations owning and operating a total of 213 educational radio and TV stations. Fi: By membership fees. Also some support from outside sources for special research projects. The national independent professional association, which since 1925 has represented the interests and needs of educ. television and radio broadcasters, represents appr. 75% of the educ. st's and production centers of the United States (appr. 90% exc. those identified as religious st.).

Activities and Functions: The NAEB is the Association of American institutions operating educational, cultural and public Sec's radio and TV st's and production centers. Publish a monthly Newsletter, a periodic Washington Report, and a bi-monthly Journal. The NAEB also operates a radio network which duplicates via tape and distributes to members st's five hours of programming per week. At present there are some 135 st's in this network. Exchanges of prgr's with other nations are welcomed. It also actively cooperates with various intern. organizations (European Broadcasting Union, UNESCO etc.), and the national systems of various other countries. According to FCC regulations, non-comm. educational FM st's have no restrictions on transmission time.

PRIVATE STATIONS

GOVERNMENT AGENCY:

THE FEDERAL COMMUNICATIONS COMMISSION (FCC) the licensing agency for broadc. st's.

Addr: P.O. Dept. Bldg, Washington 20554, D.C. - L.P. (key officials): Chmn: E. W. Henry. Executive Dir: C. B. Plummer. Sec: B. F. Waple. Chief, Broadcast Bureau: J. B. Sheridan, Chief, Reports & Information: G. O. Gillingham.

The FCC is an independent Federal agency, composed of seven Commissioners appointed by the Pres. by and with the advice and consent of the Senate. One of its major activities is the general regulation of broadc. - now visual as well as aural. This regulation may be divided into three phases: 1) The allocation of spectrum space to the different types of broadcast services, 2) Considerations to build and operate individual stations, 3) Regulating their operation.

Call letters. - International agreement provides for the national identification of the radio st, by the first letter or first two letters of its assigned call signal, and for this purpose apportions the alphabet among different nations. USA st's use the initial letters K, N, and W, exclusively, and part of the A series. Broadcast st's are assigned call letters beginning with K or W. Generally speaking, those beginning with K are assigned to st's west of the Mississippi River and in the territories and possessions, while W is assigned to broadcast st's east of the Mississippi.

Number of broadc. st's in the USA as of August 1, 1965.

radio-microphone systems

for a dependable wire-free link between microphone and amplifier

A number of radio microphone systems designed and made by Audio Ltd. are already in regular use in British and European TV Stations. Not only have problems of size both in transmitter and receiver been completely overcome, but standards of reliability and performance are of such a high order that entirely new fields of sound application are being opened up as a consequence. Radio Microphones by Audio Ltd. are characterised by complete stability, rugged construction, exceptional quality of sound and total freedom of movement for the user. The circuitry used enables the transmitter and receiver to be supplied in conformity with official governmental requirements in any part of the world. Good delivery is offered. Enquiries invited.

- Supplied on any one frequency from 27 to 200 Mc/s
- Crystal controlled transmitter and receiver ensure stability
- Built-in checks for tuning and transmitter power
- Low distortion A.F limiter in transmitter
- 2 di-pole aerials with integrated R.F amplifiers
- Headphone monitoring
- Transmitter size – 78 mm × 24 mm × 103 mm long with plug

WORLDVISION

**Cable: AMBROCASTS
to start Worldvision
working for you
in 20 million
responsive homes.**

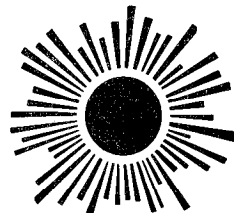

Worldvision is ABC International's world-wide television network.

It is the fastest-growing advertising medium in the world —
a new kind of network designed for today's new breed of international
businessmen. Here are the facts: 23 countries represented.

The ABC Worldvision Network includes television stations in the
following countries: Canada, Mexico, Japan, Guatemala, El Salvador,
Honduras, Nicaragua, Costa Rica, Panama, Venezuela, Ecuador,
Brazil, Colombia, Argentina, Lebanon, Iran, Nigeria, Dominican Republic,
Okinawa, Philippines, Australia, Haiti, Netherlands Antilles.

This represents a total of more than 20 million television homes —
*an estimated 90 million viewers with a spending potential
of \$136 billion in disposable income.* The Worldvision Network
can give you the best programs and scheduling to reach
one — or all — of these far-flung markets efficiently through the
impact of television. And the Worldvision Network
is easy to use — as easy as cabling Ambrocasts.

5 IMPORTANT REASONS WHY YOU SHOULD USE THE NEW MGM GEMINI TAPE/FILM SYSTEM

GEMINI is a fully perfected system which produces simultaneous, direct 16mm film during any type of television production, live or tape

If you are a producer of tape or film programs for commercial, educational, industrial, training or other purposes, consider these important advantages offered exclusively by GEMINI:

- 1 GEMINI provides high-quality film, superior to that obtainable from the kinescope process.
- 2 GEMINI provides a high-quality means for program distribution to countries having television standards different from yours.
- 3 GEMINI film costs less than video tape to telecast, or to store or ship.
- 4 GEMINI provides a means of producing color programming with your present black-and-white video equipment.
- 5 GEMINI makes editing virtually automatic through our exclusive Edilite system.

NBC INTERNATIONAL: UNIQUE GIANT IN A UNIQUE FIELD

In the realm of world communications, television enjoys a privileged role. No other medium can unite peoples of different lands and backgrounds so quickly, intimately and effectively. And in the field of international television, you will find one organization whose resources and experience have placed it in a class by itself. ■ That organization is NBC International. In more than 80 regions—representing more than 300 stations over the globe—NBC International renders an unequalled service ranging from the construction of TV facilities to the distribution of TV programs. It is a service that not only

grows with the times, but anticipates them as well. Color TV, for example, is mushrooming in popularity throughout the world; and—because of its association with the National Broadcasting Company, pioneer in color TV—NBC International is uniquely prepared to satisfy this increasing demand for color. Uniqueness, in this instance, begins at home, where NBC is the Full Color Television Network. ■ In *all* instances, NBC International has brought a pioneering spirit to global communications—and has become, in consequence, the leading broadcaster in the international field.

FROM SEVEN ARTS TELEVISION

TV SPECIALS, CARTOONS AND NEW PROGRAMMING

An outstanding offering of quality entertainment for world-wide television broadcasting:

- **THE NUTCRACKER** A new one-hour Color TV Special produced by Bavaria Studios with music by the Philharmonic Orchestra of Budapest arranged by Franz Allers ("My Fair Lady") and featuring internationally acclaimed premiere dances of the New York City Ballet, the National Opera of Stuttgart, the National Opera of Munich and the Royal Opera of Copenhagen.
- **MAN IN SPACE** An exciting and timely series of six one-hour TV Specials (5 in color) of the incredible story of man in space, his trip to the moon and its consequences.
- **THE GYPSY ROSE LEE SHOW** New half-hour daily across-the-board interview program starring Gypsy Rose Lee and various famous guest celebrities including Judy Garland, Robert Goulet, Phyllis Diller, Arthur Fiedler and Diahann Carroll.
- **BEHIND THE SCENES WITH THE ROYAL BALLET** A beautiful new half-hour TV Special backstage with Rudolf Nureyev and Margot Fonteyn.
- **THE PROFESSIONALS** A unique study of an N.F.L. Pro-Football Quarterback in color. Starring Baltimore Colts' Johnny Unitas. Commentary by Frank Gifford.
- **26 BOSTON SYMPHONY CONCERTS** One-hour TV Concert Specials featuring the world renowned 104-piece Boston Symphony Orchestra and famous guest soloists. The concerts are conducted by Erich Leinsdorf, Charles Munch, Aaron Copland, William Steinberg and Richard Burgin.
- **100 "OUT OF THE INKWELL" CARTOONS IN COLOR** New TV subjects produced by Max Fleischer, the creator of Popeye.
- **AVAILABLE IN CANADA ONLY**
- **THE AVENGERS** 39 one-hour action-adventure counter-espionage programs starring Honor Blackman.
- **234 (ORIGINAL) POPEYE CARTOONS** Rated the very best TV cartoons. 114 available in color.
- **337 WARNER BROS. CARTOONS** Bugs Bunny, Porky Pig and all the other famous Warner Bros. characters. 311 in color.
- **191 LOONEY TUNES** Cartoons starring Porky Pig, Daffy Duck and their friends.
